Supplementary Figure S2. SARS-CoV-2 ORF fragments containing conserved regions in Human, Betacoronavirus or Pan-coronavirus alignments are shown. Epitope description was carried out based on experimentally described epitopes from the Immune Epitope Database (IEDB, www.iedb.org). Species where the epitope was described are indicated by sequence color. Logos of conserved sequences along the three alignments (Pan-coronavirus, Betacoronavirus or Human coronavirus) were included. The alignment where the conserved regions were identified is indicated by color squares
