Figure S1. The ROC curve for classification according to the multivariable model for predicting mortality in patients with cardiogenic shock, AUC = 0.73.

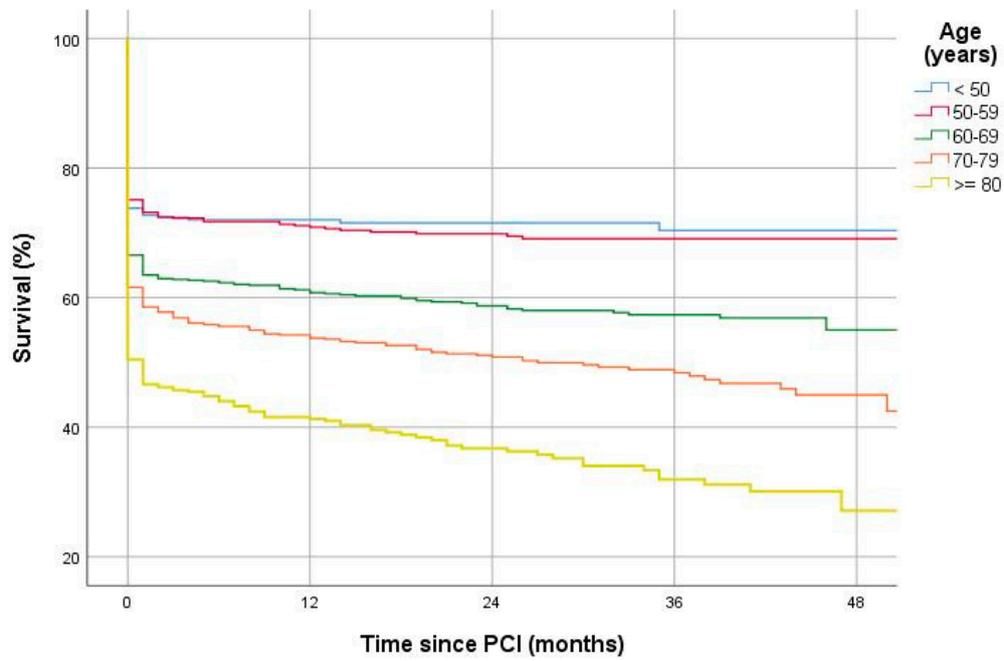

Diagonal segments are produced by ties.

Table S1. Results of univariable Cox regression analysis and multivariable model to predict mortality for patients with cardiogenic shock excluding patients who died before or at 30-days (N=1,916).

Variables with $p < 0.10$ in the univariable analysis were included in the multivariable model. STEMI vs NSTEMI; PCI center vs heart center; reference intervention year was 2018. CTO, chronic total occlusion; MI, myocardial infarction; CABG, coronary bypass grafting; eGFR, estimated glomerular filtration rate; STEMI, ST-segment elevation myocardial infarction; NSTEMI, non-ST-segment elevation myocardial infarction; PCI, percutaneous coronary intervention.
