Effect of INTELLiVENT-ASV versus Conventional Ventilation on Ventilation Intensity in Patients with COVID-19 ARDS—an observational study

Laura A. Buiteman-Kruizinga, Hassan E. Mkadmi, Ary Serpa Neto, Matthijs D. Kruizinga, Michela Botta, Marcus J. Schultz, Frederique Paulus and Pim L.J. van der Heiden

Figure S1.....	2
Figure S2.....	3
Figure S3.....	4
Figure S4.....	5
Figure S5.....	7
Figure S6.....	8
Figure S7.....	9
Table S1a-h.....	10

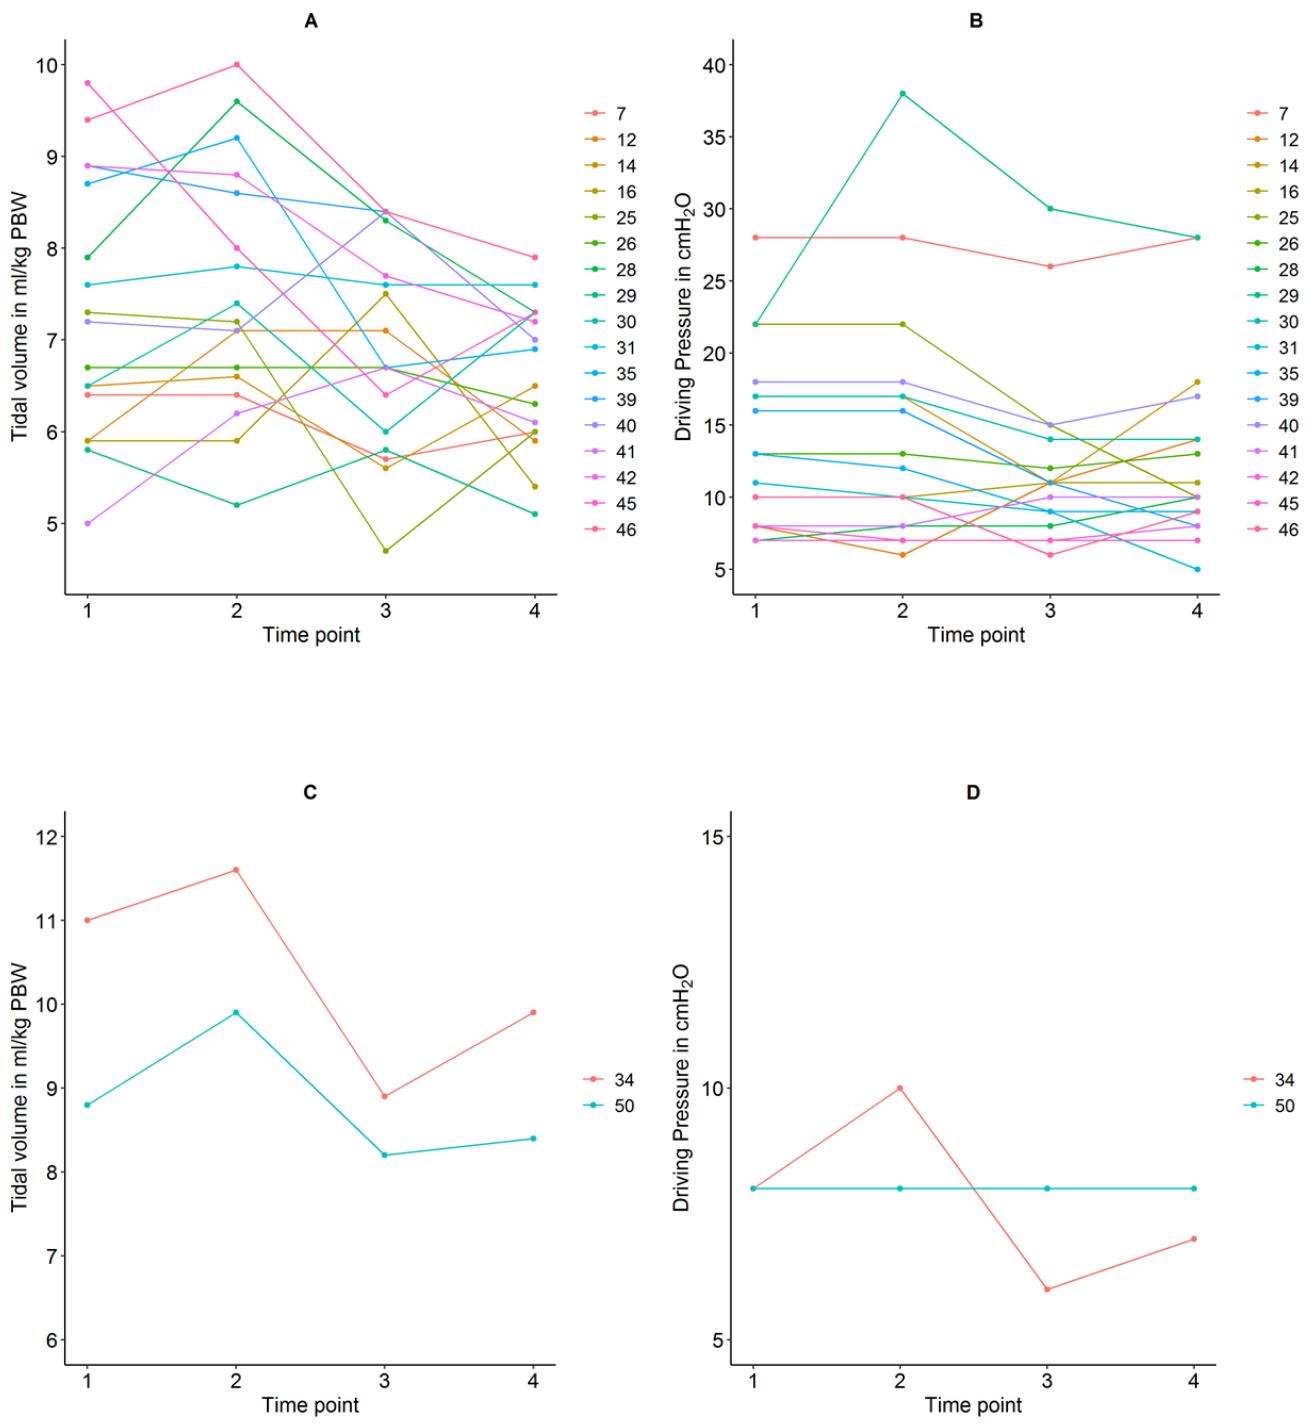

Figure S1. Plot of a subset of patients of individual changes in V_T and ΔP . Plot of a subset of patients with a decrease in V_T with INTELLiVENT-ASV, as determined 1 hour before conversion and 2 hours after conversion with (a) a decrease to a V_T below 8 ml/kg PBW; (b) the effect on ΔP in the same patients; (c) a decrease to a V_T above 8ml/kg PBW; and (d) the effect on ΔP in the same patients. Timepoints 1 and 2 are with conventional ventilation, and 3 and 4 are with INTELLiVENT-ASV.

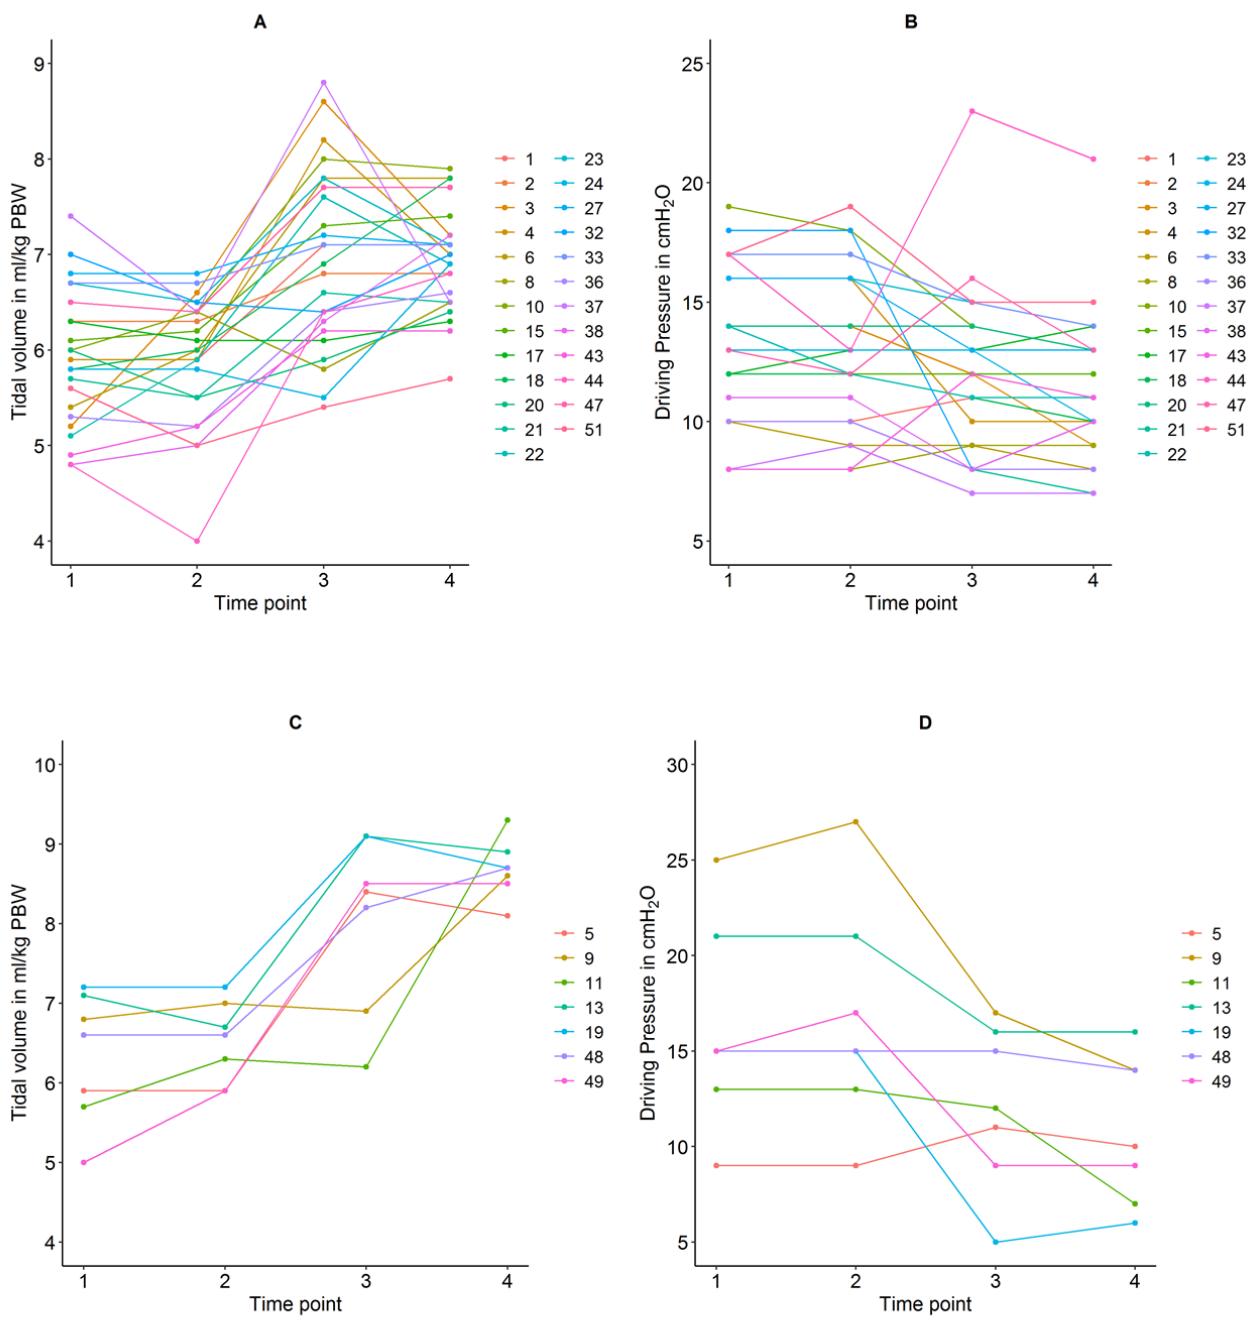

Figure S2. Plot of a subset of patients of individual changes in V_T and ΔP . Plot of a subset of patients with an increase in V_T with INTELLiVENT-ASV, as determined 1 hour before conversion and 2 hours after conversion with (a) an increase to a V_T below 8 ml/kg PBW; (b) the effect on ΔP in the same patients; (c) an increase to a V_T above 8ml/kg PBW; and (d) the effect on ΔP in the same patients. Timepoints 1 and 2 are with conventional ventilation, and 3 and 4 are with INTELLiVENT-ASV.

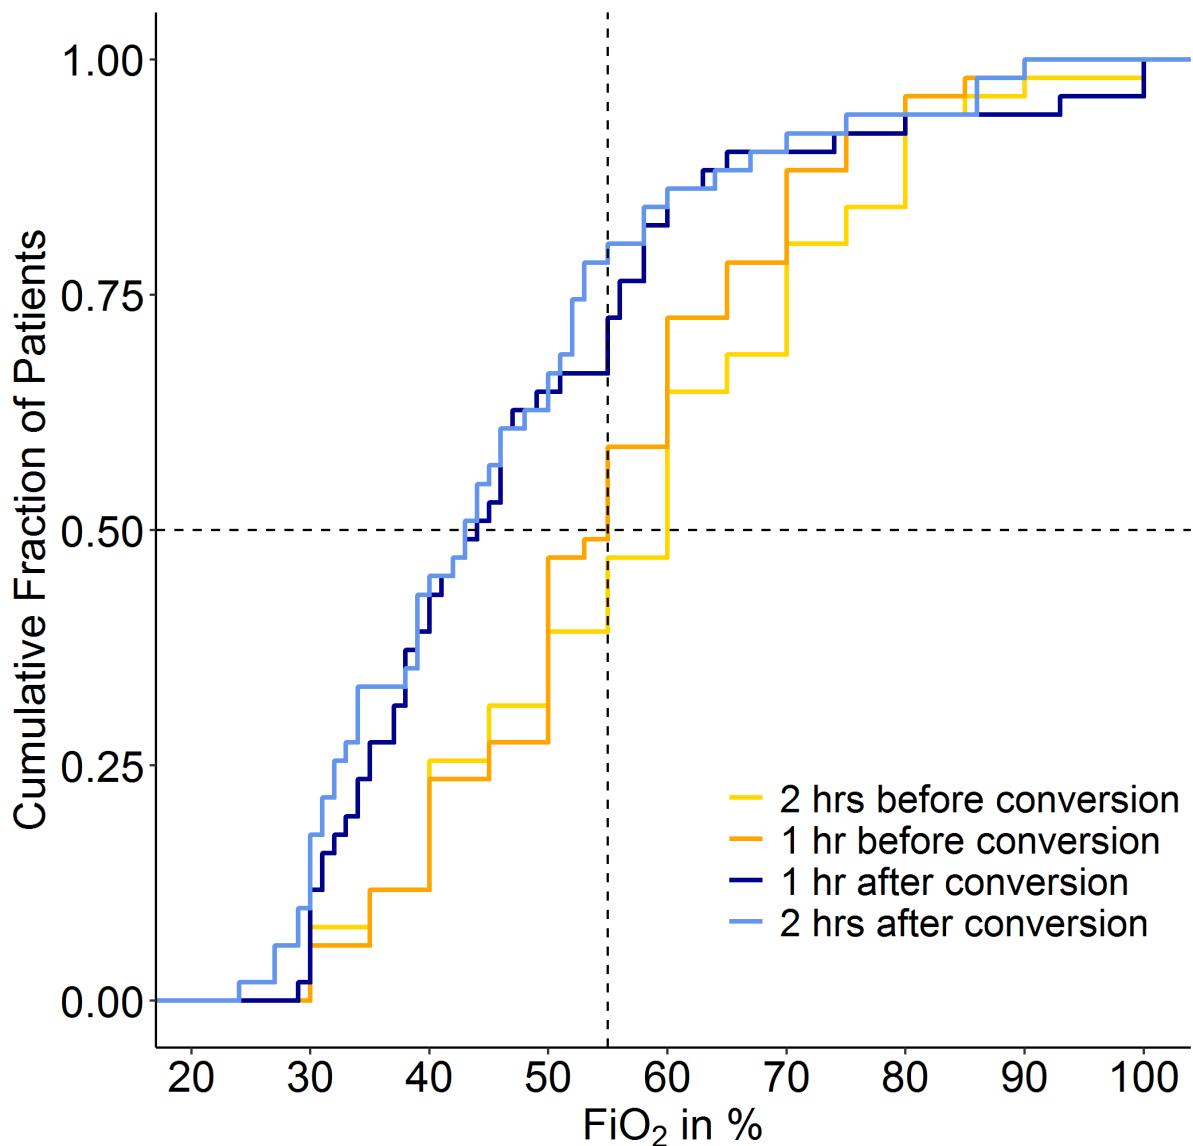

Figure S3. Cumulative frequency distribution of minute volume in liters. The plot shows minute volume from before to after the conversion between conventional ventilation and INTELLiVENT-ASV. Vertical dotted lines represent the median at the last hour before the conversion, and horizontal dotted lines show the respective proportion of patients reaching each cutoff.

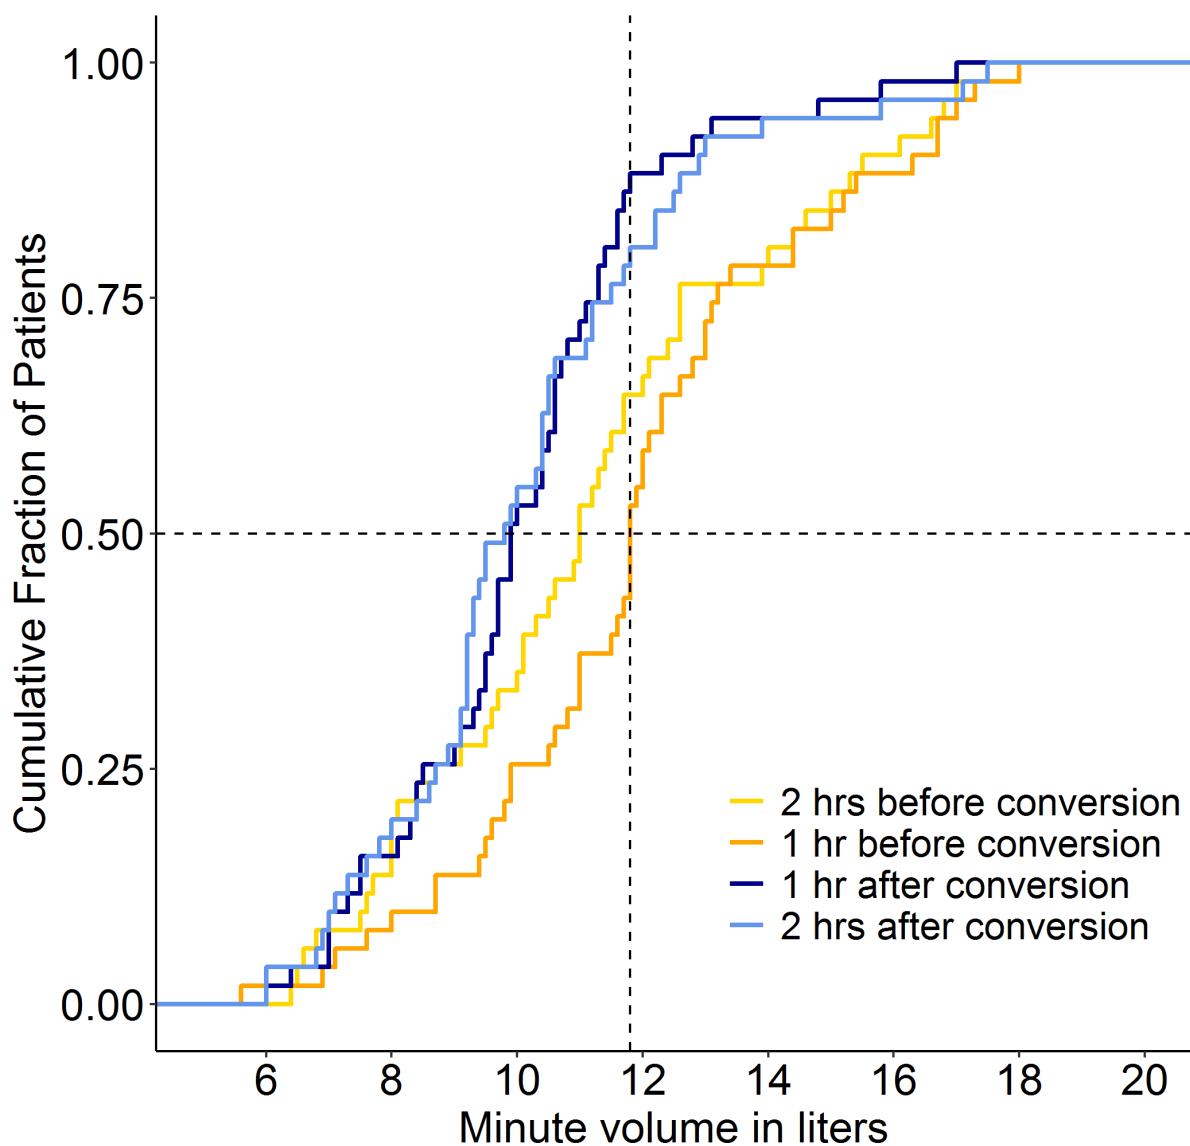

Figure S4. Cumulative frequency distribution of the fraction of inspired oxygen. The plot shows the FiO₂ from before to after the conversion between conventional ventilation and INTELLiVENT-ASV. Vertical dotted lines represent the median at the last hour before the conversion, and horizontal dotted lines show the respective proportion of patients reaching each cutoff.

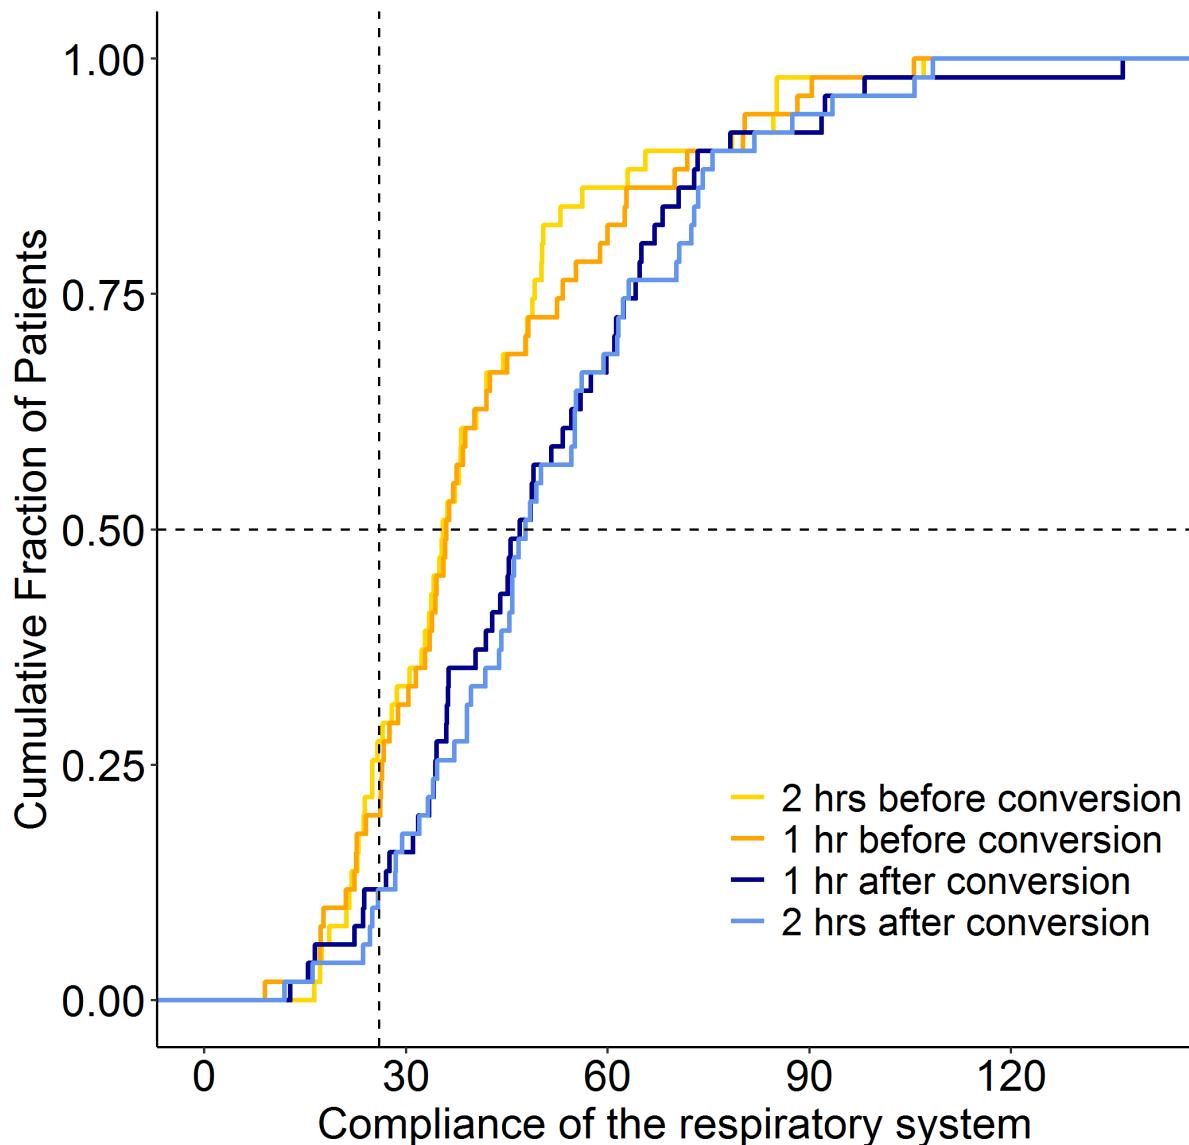

Figure S5. Cumulative frequency distribution of the compliance of the respiratory system in mL/cm H₂O liters. The plot shows the CRs from before to after the conversion between conventional ventilation and INTELLiVENT-ASV. Vertical dotted lines represent the median at the last hour before the conversion, and horizontal dotted lines show the respective proportion of patients reaching each cutoff.

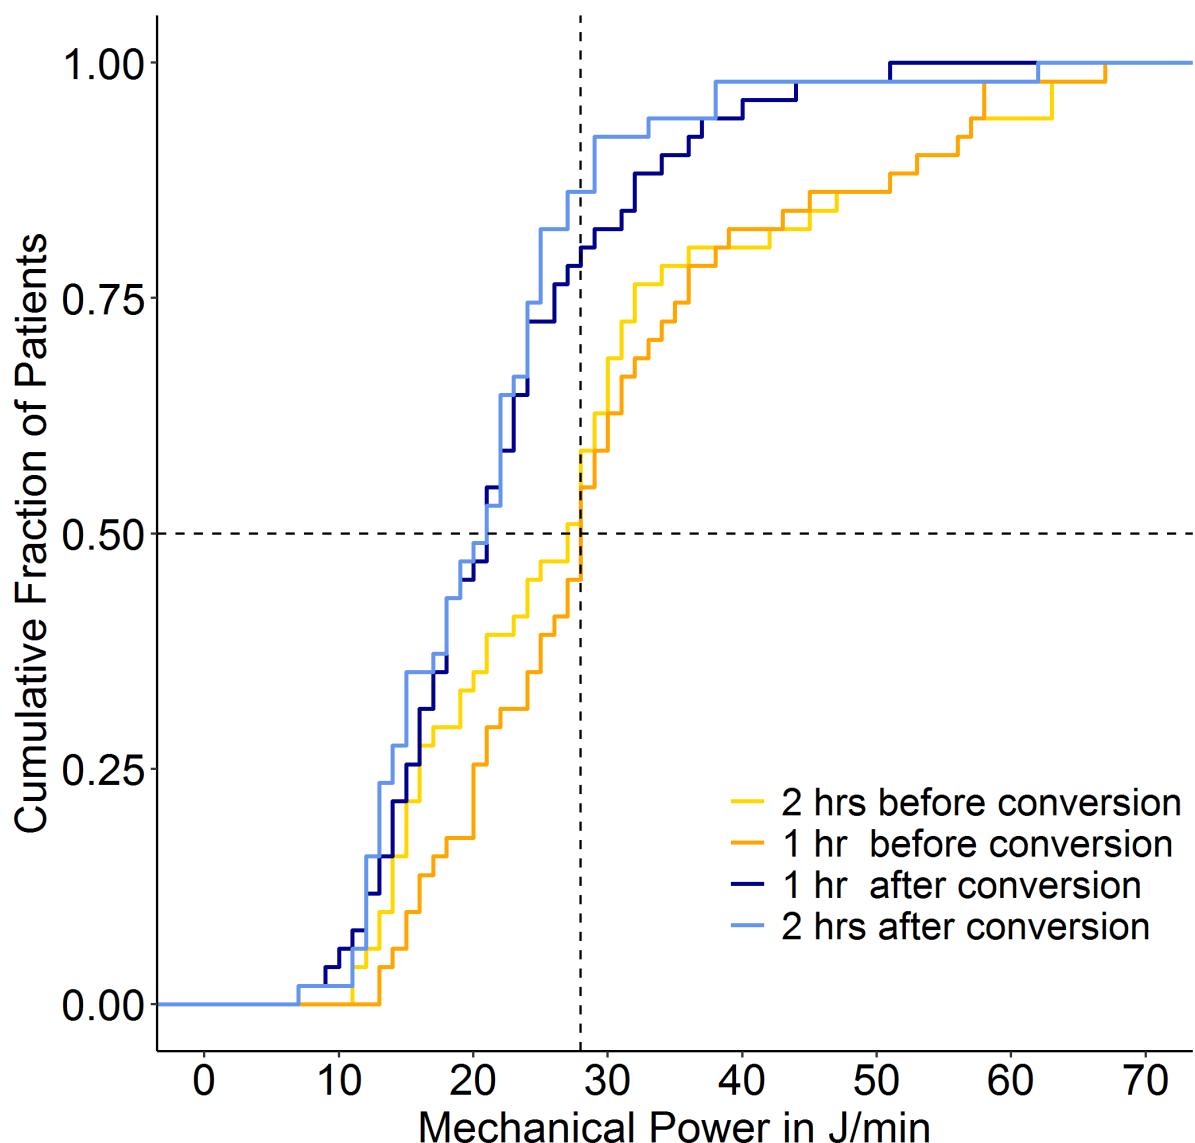

Figure S6. Cumulative frequency distribution of MP with an alternate equation. The plot shows MP from before to after the conversion between conventional ventilation and INTELLiVENT-ASV. Vertical dotted lines represent the median at the last hour before the conversion, and horizontal dotted lines show the respective proportion of patients reaching each cutoff. MP was calculated as $0.098 * \text{RR} * V_T * (\text{Pinsp} + \text{PEEP})$.

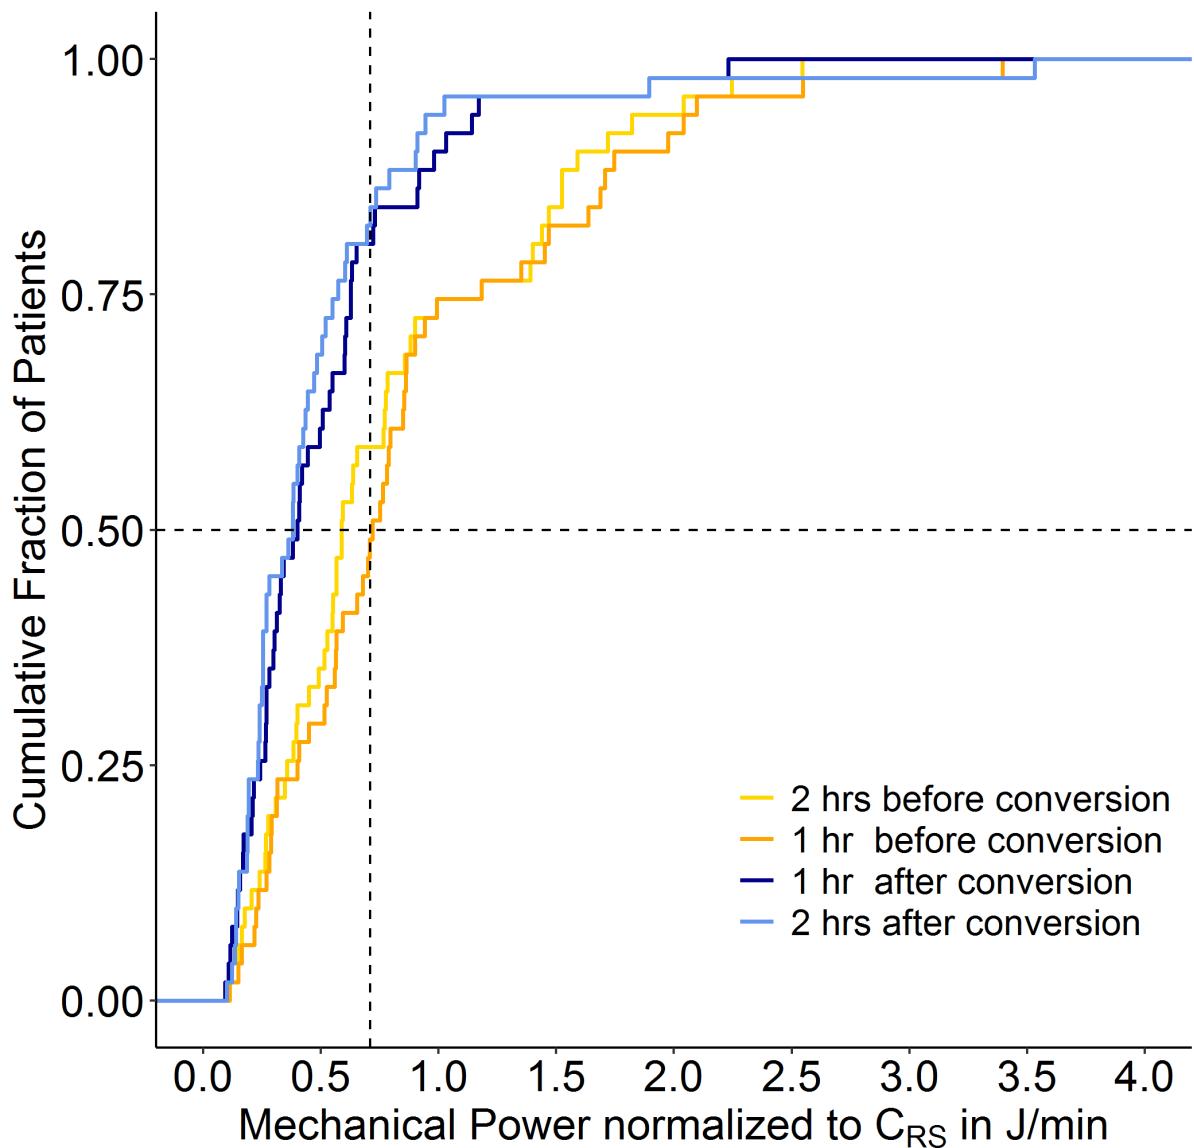

Figure S7. Cumulative frequency distribution of MP normalized to C_{RS} . The plot shows MP from before to after the conversion between conventional ventilation and INTELLiVENT-ASV. Vertical dotted lines represent the median at the last hour before the conversion, and horizontal dotted lines show the respective proportion of patients reaching each cutoff. C_{RS} (mL/cm H₂O) = $V_T/\Delta P$, and MP_{NORM} (J/min per mL/cm H₂O) = MP/C_{RS} .
