## Ocular Inflammation Induced by Immune Checkpoint Inhibitors

**Figure S1.** Distribution of uveitis depending on the ICPI

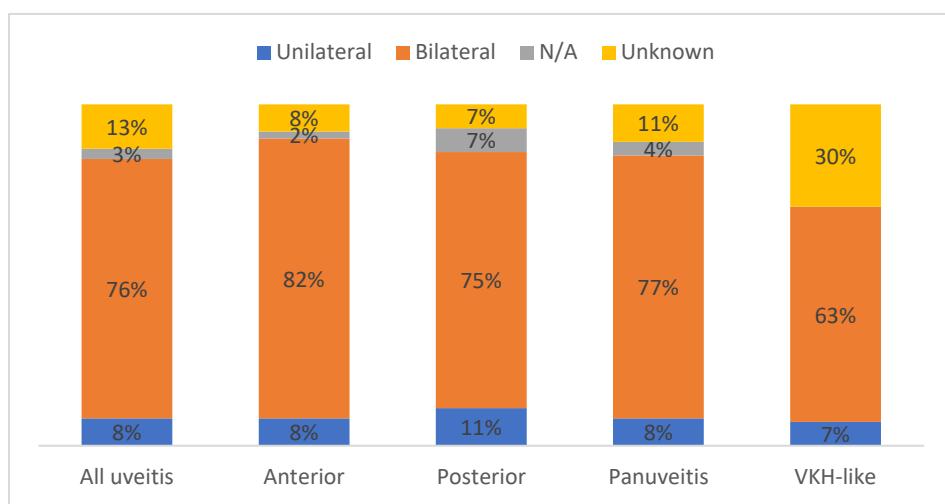

**Figure S2.** Neoplastic outcome depending on the type of ocular IRAEs at the end of the follow-up.

**Figure S3.** ICPI indications

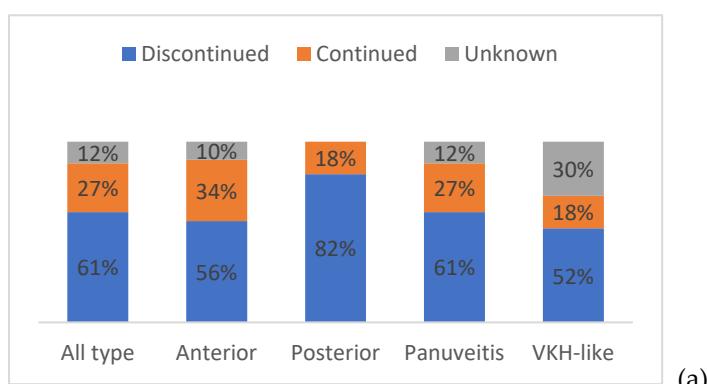

\* 96 patients with melanoma (of whom 7 with uveal melanoma) ;

\*\* Small cell lung cancer (n=2 patients), lymphoma (n=2), prostate carcinoma (n=2), esophageal carcinoma (n=2), ovarian carcinoma (n=2), endometrial cancer (n=1), colon adenocarcinoma (n=1), hypopharyngeal carcinoma (n=1), hypopharyngeal carcinoma (n=1), duct carcinoma (n=1), cutaneous squamous cell carcinoma (n=1), mesothelioma (n=1), unknown primary neoplasm (n=1).

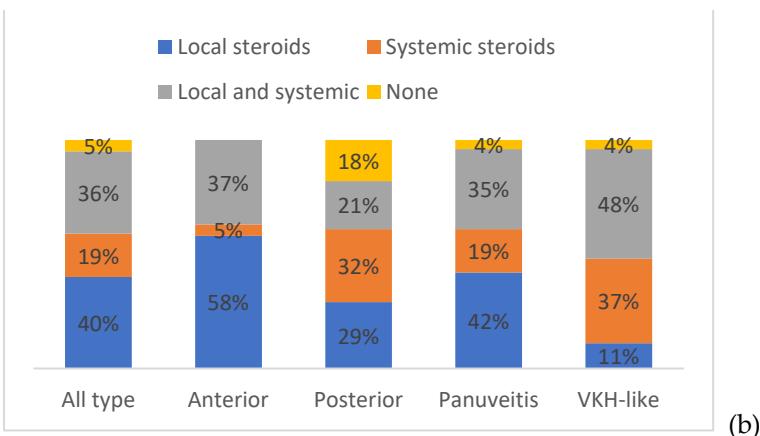

**Figure S4.** Unilateral or bilateral nature of the uveitis, depending on the type of uveitis.

N/A= not applicable, patients with a history of previous enucleation.
