

Supplementary Materials

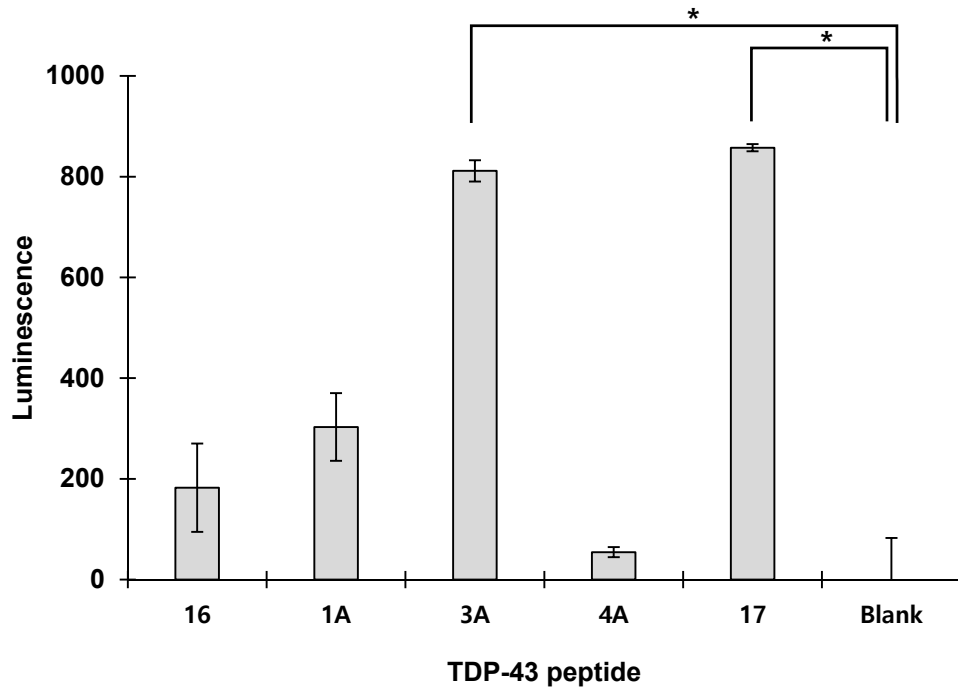

Figure S1. Normalized bound α -synuclein to overlapping peptides of TDP-43 (overlapping peptides are indicated with A). Data are shown as mean \pm SD of duplicate measurement. Significant luminescence was observed for bound α -synuclein at peptides 1A and 3A when compared to the background ($p < 0.05$).

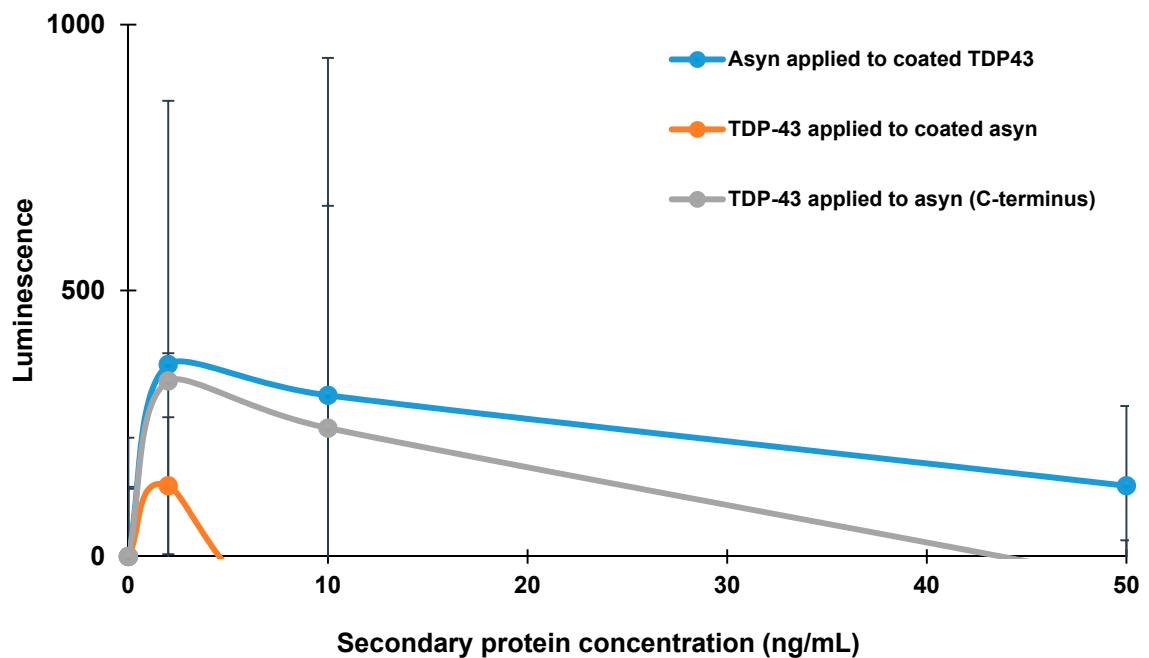

Figure S2. Conventional ELISA of serially diluted secondary protein bound to fixed concentrations of primary protein. Legends indicate the order in which the proteins were applied.
