**A literature review of clinical tests for lumbar instability in low back pain: validity and applicability in clinical practice
(Ferrari, 2015)**

PRIMARY STUDIES

First author	Year of publication	Setting(s) of data collection	Number of participants (N)	Population	Reference standard	Index test	Diagnostic accuracy data
Fritz	2005	Tertiary	N=38	Patients with LBP with or without buttock or leg pain	Dynamic X-Ray (Flexion/extension)	Aberrant movement pattern: Painful arc on flexion;	Se 0.18 (0.08, 0.36); Sp 0.95 (0.77, 0.99); +LR 3.75 (0.47, 29.75); -LR (0.71, 1.05)

					Painful arc on return; Instability catch; Gower sign ("thigh climbing"); Reverse lumbopelvic rhythm. (Positive test when at least 1 of the previous 5 signs was present.)		
					Prone Instability Test (Positive test when pain provoked during the first part of the test decreases when the test is repeated with the legs off the floor)	Se 0.71 (0.53, 0.85); Sp 0.57 (0.37, 0.76); +LR 1.67 (0.97, 2.88); -LR 0.50 (0.97, 2.88)	
					Posterior Shear Test: Positive test if familiar symptoms are provoked.	Se 0.50 (0.34,0.66); Sp 0.48 (0.28, 0.68); +LR 0.96 (0.56, 1.63); -LR 1.05 (0.60, 1.85)	
Kasai	2006	NA	N=122	Patients with lumbar degenerative diseases (89 lumbar spinal canal stenosis; 21 lumbar spondylolisthesis; 12 lumbar degenerative scoliosis)	Dynamic x-ray: flexion-extension films of the lumbar spine, lateral vision.	Passive lumbar extension test	Se 0.84 (0.7, 0.93); Sp 0.90 (0.82, 0.95); +LR 8.84 (4.51,17.34); -LR 0.18 (0.08, 0.37)
					Instability catch sign	Se 0.26 (0.15,0.42); Sp 0.86 (0.77, 0.92); +LR 1.84 (0.87, 3.89); -LR 0.86 (0.87, 1.06)	

Clinical Tests to Diagnose Lumbar Segmental Instability: A Systematic Review

PRIMARY STUDIES							
First author	Year of publication	Setting(s) of data collection	Number of participants (N)	Population	Reference standard	Index test	Diagnostic accuracy data
Kasai	2006	NA	N=122	Patients with lumbar degenerative diseases (89 lumbar spinal canal stenosis; 21 lumbar spondylolisthesis; 12 lumbar degenerative scoliosis)	Dynamic x-ray: flexion-extension films of the lumbar spine, lateral vision.	Painful catch sign	Se 37 (22, 54); Sp 73 (62, 82); +LR 1.4 (0.8, 2.3); -LR 0.9 (0.7, 1.1)
						Apprehension sign	Se 18 (8, 35); Sp 88 (79,94); +LR 1.6 (0.6, 3.8); -LR 0.9 (0.8, 1.1)
Maigne	2003	Tertiary	N=42	Patients with chronic LBP	Radiographic diagnosis of translational LSI (flexion-extension radiographs)	Sit-to-stand test (pain upon sitting down and relieved by standing up)	Se 31 (10, 61); Sp 100 (85, 100); -LR 0.7 (0.5, 1.0)
Diagnostic performance of clinical tests for sacroiliac joint pain (Sivayogam, 2011)							
PRIMARY STUDIES							
First author	Year of publication	Setting(s) of data collection	Number of participants (N)	Population	Reference standard	Index test	Diagnostic accuracy data
Laslett	2005	Secondary	N=48	Patients with buttock pain, with or without lumbar or lower extremity symptoms	Double SIJB with 1.5 ml lidocaine and bupivacaine; pain provocation followed by 80% pain relief on NRS1	Distraction	Se 0.60 (0.36, 0.80); Sp 0.81 (0.65, 0.91); +LR 3.20; -LR 0.49
						Compression	Se 0.69 (0.44, 0.86); Sp 0.69 (0.51); +LR 2.20; -LR 0.46
						Thigh thrust	Se 0.88 (0.64, 0.97); Sp 0.69 (0.82); +LR 2.80; -LR 0.18
						Gaenslen's right	Se 0.53 (0.30, 0.75); Sp 0.71 (0.53, 0.84); +LR 1.84; -LR 0.66
						Gaenslen's left	Se 0.50 (0.27,0.73); Sp 0.77 (0.60, 0.89); +LR 2.21; -LR 0.65

						Sacral thrust	Se 0.63 (0.39, 0.82); Sp 0.75 (0.58, 0.87); +LR 2.50; -LR 0.50
Broadhurst and Bond	1998	NA	N=40	NA	SIJB with 4 ml lidocaine 1% or 0.9% NaCl; 70% pain relief on VAS	Patrick's sign	Se 0.77; Sp 1.00
						Thigh thrust	Se 0.80; Sp 1.00
						Resisted abduction	Se 0.87; Sp 1.00
Dreyfuss	1996	Tertiary	N=85	Patients ≥ 18 years with non-specific, non-pregnancy related low back pain and/or buttock pain, with or without lower extremity symptoms	SIJB {with 1.5 ml lidocaine 2% and 0.5 ml corticosteroids; 90% pain relief on VAS)	Gillet test	Se 0.43; Sp 0.68; +LR 1.3; -LR 0.83
						Thigh thrust	Se 0.36; Sp 0.50; +LR 0.7; -LR 1.28
						Patrick's sign	Se 0.69; Sp 0.16; +LR 0.8; -LR 1.93
						Gaenslen's test	Se 0.71; Sp 0.26; +LR 1.0; -LR 1.11
						Sacral thrust	Se 0.53; Sp 0.29; +LR 0.8; -LR 1.62

Roman	2010	Secondary	N=1448	Patients with lumbar-related disorders	Standard radiograph or CT assessing sagittal alignment,	1 of 5 positive tests (age > 52 years, no presence of leg	Se 0.97 (0.89, 0.99); Sp 0.06 (0.06, 0.07); LR+ 1.04 (0.92, 1.1); LR- 0.39 (0.07, 2.1)

					vertebral body compression and spinal canal dimensions	pain, body mass index ≤22, does not exercise regularly and female gender	
					2 of 5 positive tests	Se 0.95 (0.83, 0.99); Sp 0.34 (0.33, 0.34); LR+ 1.4 (1.3, 1.8); LR- 0.16 (0.04, 0.51)	
					3 of 5 positive tests	Se 0.76 (0.61, 0.87); Sp 0.68 (0.68, 0.69); LR+ 2.5 (1.9, 2.8); LR- 0.34 (0.19, 0.46)	
					4 of 5 positive tests	Se 0.37 (0.24, 0.51); Sp 0.96 (0.95, 0.97); LR+ 9.6 (3.7, 14.9); LR- 0.65 (0.50, 0.79)	
					5 of 5 positive tests	Se 0.03 (0.01, 0.08); Sp 0.99 (0.98, 0.99); LR+ 9.3 (1.4, 60.2); LR- 0.97 (0.92, 0.99)	

Table S28: Diagnostic accuracy of diagnostic support tools for the diagnosis of spinal malignancy

The diagnostic value of red flags in thoracolumbar pain: a systematic review (Maselli, 2020)							
PRIMARY STUDIES							
First author	Year of publication	Setting(s) of data collection	Number of participants (N)	Population	Reference standard	Index test	Diagnostic accuracy data
Premkumar	2018	NA Retrospective study of medical files	N= 9940	Patients visiting their medical doctor for a chief complaint of LBP	Imaging reports	Combination of unexplained weight loss and history of malignancy	Se 0.03; Sp 0.99; LR+ 10.25 (3.6, 29.21); LR- 0.98 (0.95,1)

Red flags to screen for malignancy in patients with low-back pain (Henschke, 2013)							
PRIMARY STUDIES							
First author	Year of publication	Setting(s) of data collection	Number of participants (N)	Population	Reference standard	Index test	Diagnostic accuracy data
Deyo	1988	Primary	N=1975	Patients with a primary complaint of LBP of less than 1-month duration	Lumbar radiographs	Combination of age greater than 50 years, history of malignancy, unexplained weight loss and failure to improve with conservative therapy	Se 1.00

Table S29: Diagnostic accuracy of diagnostic support tools for the diagnosis of spinal infection

The diagnostic value of red flags in thoracolumbar pain: a systematic review (Maselli, 2020)							
PRIMARY STUDIES							
First author	Year of publication	Setting(s) of data collection	Number of participants (N)	Population	Reference standard	Index test	Diagnostic accuracy data
Premkumar	2018	NA Retrospective study of medical files	N= 9940	Patients visiting their medical doctor for a chief complaint of LBP	Imaging reports	Combination of fever, chills or sweating, and a recent infection	Se 0.08; Sp 0.99; LR+ 13.15 (6.66, 25.97); LR- 0.93 (0.88, 0.98)
Low Back Pain in the Emergency Department: Prevalence of Serious Spinal Pathologies and Diagnostic Accuracy of Red Flags (Galliker, 2020)							
PRIMARY STUDIES							
First author	Year of publication	Setting(s) of data collection	Number of participants (N)	Population	Reference standard	Index test	Diagnostic accuracy data

Davis	2011	Primary (ED)	N=55	Patients who present to ED with spine pain	Imaging	Classic triad (Fever $\geq 38^{\circ}\text{C}$, spine pain and neurological deficit)	LR+ 5.7 (1.4, 23.2)
Davis	2004	Primary (ED)	N=189	Patients with spinal epidural abscess presenting to the ED	Imaging	Classic triad (Fever $\geq 38^{\circ}\text{C}$, spine pain and neurological deficit)	Se 0.08; Sp 0.99; LR+ 10.0; LR- 0.93

Table S30: Diagnostic accuracy of diagnostic support tools for the diagnosis of inflammatory back pain

Diagnostic Clinical Prediction Rules for Specific Subtypes of Low Back Pain: A Systematic Review (Haskins, 2015)							
PRIMARY STUDIES							
First author	Year of publication	Setting(s) of data collection	Number of participants (N)	Population	Reference standard	Index test	Diagnostic accuracy data
Braun	2013	Primary	N= 322	Patients with LBP $> 2\text{ mo}$ presenting to orthopaedic surgeons, most with ≥ 1 inflammatory back pain symptoms	Diagnosis of axial SpA as determined by a rheumatologist (dichotomous)	(1) age at onset ≤ 35 yrs; (2) alternating buttock pain; (3) improvement with NSAIDs within 48h; (4) waking up in the second half of the night; (5) improvement with movement and not with rest	For 4 or more predictors present: Se 0.48; Sp 0.86; +LR 3.4; -LR 0.6
Chan	2012	NA	N=25	Patients with anterior uveitis	Diagnosis of inflammatory back pain by rheumatologist (dichotomous)	Berlin criteria: (1) morning stiffness, (2) improvement in back pain with exercise but not with rest; (3) awakening because of	For 2 or more predictors present: Se 0.92; Sp 0.67; LRs not reported but calculated to be +LR 2.8 (1.2, 6.3); -LR 0.12 (0.02, 0.79)

						back pain in the second half of the night only; (4) alternating buttock pain	
Sieper	2009	NA	N=648	Patients with chronic back pain of unknown origin that began before 45 yrs of age	Diagnosis of inflammatory back pain by rheumatologist (dichotomous)	Berlin criteria	For 2 or more predictors present; Se 0.70; Sp 0.81; LRs not reported but approximated to be +LR 3.8 (2.8, 5.0); -LR 0.37 (0.31, 0.43)
						(1) age at onset < 40 yrs, (2) insidious onset; (3) improvement with exercise; (4) no improvement with rest; (5) pain at night with improvement on getting up	For 4 or more predictors present: Se 0.80; Sp 0.72; LRs not reported, but approximated to be +LR 2.9 (2.3, 3.6); -LR 0.28 (0.23, 0.35)
Rudwaleit	2004	NA	N=213	Patients with chronic back pain already diagnosed with either AS or mechanical LBP	Diagnosis of AS by a rheumatologist or other specialist prior to the study, using the modified New York criteria (dichotomous)	Berlin criteria	For 2 or more predictors present: Se 0.70 (0.61, 0.78); Sp 0.81 (0.73, 0.87); +LR 3.7 (2.5, 5.6); -LR 0.4 (0.3, 0.5)
