Intra- and inter-observer reproducibility of CMR-FT and 2D TTE speckle tracking measurements:

Intra-observer ($r=0.85$, $p<0.001$ /Mean difference 1.23% –95% levels of agreement— -18.12% to -21.71% ms) and inter-observer ($r=0.91$, $p<0.001$ /Mean difference 1.78% ms–95% levels of agreement— -19.01 to 23.71%) reproducibility for CMR RV FWS was excellent. Intra-observer ($r=0.65$, $p=0.003$ /Mean difference 1.23% –95% levels of agreement— -18.12% to -23.42% ms) and inter-observer ($r=0.91$, $p<0.001$ /Mean difference 1.78% ms–95% levels of agreement— -19.01 to 24.48%) reproducibility for CMR LV GLS was excellent. Intra-observer ($r=0.71$, $p=0.004$ /Mean difference 2.41% –95% levels of agreement— -16.22% to -24.41% ms) and inter-observer ($r=0.84$, $p=0.005$ /Mean difference 1.18% ms–95% levels of agreement— -17.14 to 22.42%) reproducibility for 2D TTE LV GLS was good.
