

SUPPLEMENTARY MATERIALS

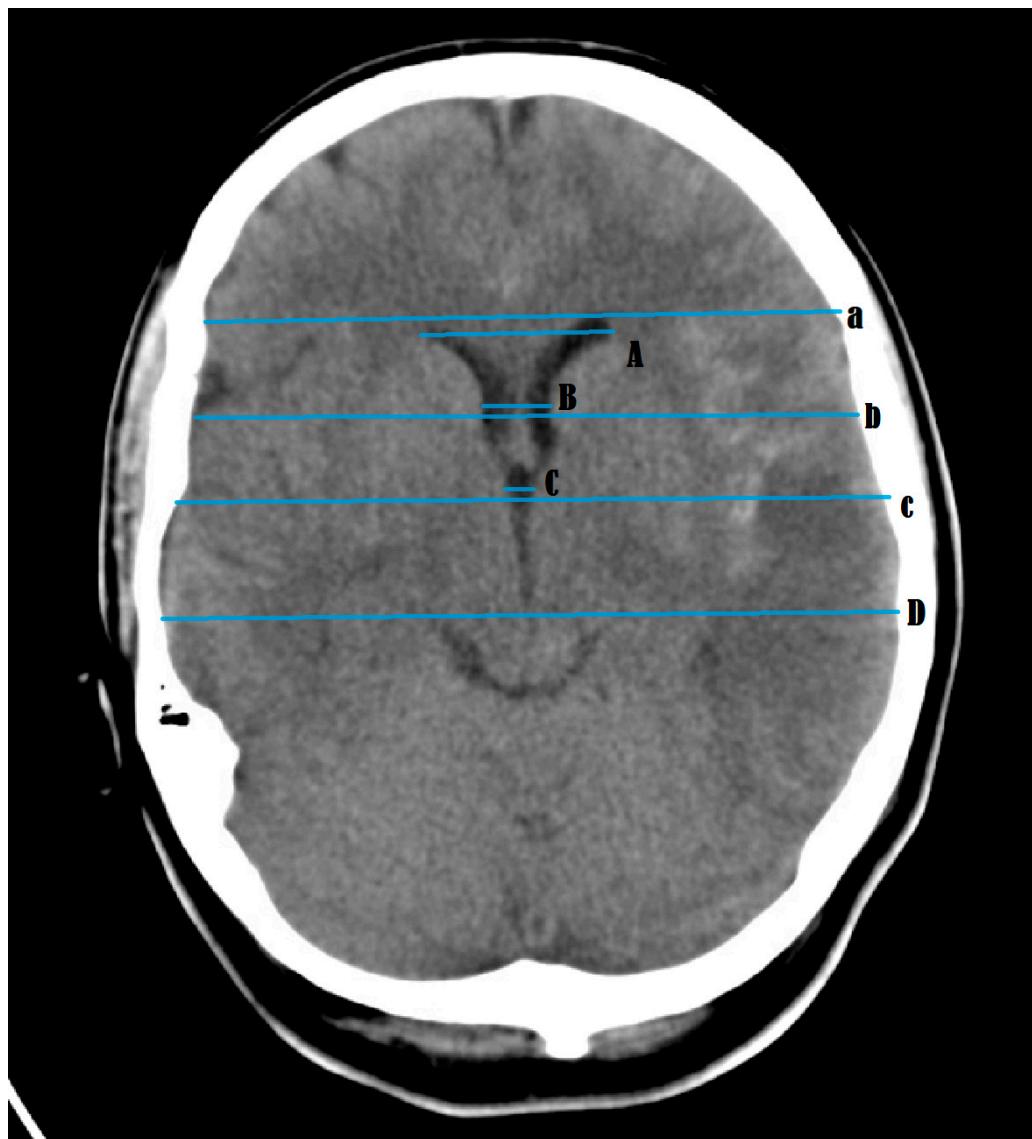

Figure S1. Illustration of the ventricular measurements. **Bifrontal ratio:** maximum width between the two frontal horns (A)/internal width of the vault at same level (a). **Bicaudate ratio:** minimum width of the ventricles between caudate nuclei (B)/internal width of the vault at same level (b). **Ventricular ratio:** minimum width of the ventricles (B)/maximum width between frontal horns (A). **Third ventricle ratio:** greatest width of the third ventricle (C)/internal width of the vault at same level (c). **Evans' index:** maximum width between frontal horns (A)/maximum internal width of the vault (D). **Huckman's index:** maximum width between the two frontal horns (A) + minimum width of the ventricles between caudate nuclei (B).

Table S1. Exploratory analyses based on the bivariate associations between the ventricular indices (as continuous variables) and other parameters included in this study.

| Parameter | Stats | Bifrontal ratio | Bicaudate ratio | Evans' index | Ventricular ratio | Huckmans' index | 3 rd ventricle ratio |

Abbreviations: CC – correlation coefficient, DIND= delayed ischemic neurological deficit, SEBES= Subarachnoid Early Brain Edema Score, CRP= C-reactive protein, IL-6= interleukin-6, ICP= intracranial pressure, TCD= transcranial Doppler sonography, CSF= cerebrospinal fluid, WFNS= World Federation of Neurosurgical Societies, mRs= modified Rankin scale. Significant findings are in **bold**.

Table S2. ROC analysis for the association between the ventricular measurements and primary study endpoint (unfavorable outcome at 6 months after SAH defined as modified Rankin scale >3). Based on the AUC values a clinically relevant cut-off was determined for the ventricular ratios and indices.

| Ventricular measurements/indices | AUC (95 % CI) | p-value | Selected cut-off |
|----------------------------------|---------------------|---------|------------------|
| Bifrontal ratio: A/a | 0.603 (0.559–0.648) | <0.0001 | 0.337 |
| Bicaudate ratio: B/b | 0.624 (0.579–0.669) | <0.0001 | 0.175 |
| Ventricular ratio: B/A | 0.614 (0.569–0.660) | <0.0001 | 0.559 |
| Huckman's index: A+B | 0.618 (0.573–0.663) | <0.0001 | 5.480 |
| Evans' index: A/D | 0.590 (0.544–0.635) | <0.0001 | 0.281 |
| Third ventricle ratio: C/c | 0.613 (0.568–0.658) | <0.0001 | 0.053 |

Abbreviations: ROC= receiver operating characteristics, AUC= area under the curve, CI= confidence interval, A= maximum width between the two frontal horns, a= internal width of the vault at level of A, B= minimum width of the ventricles between caudate nuclei, b= internal width of the vault at level of B, C= greatest width of the third ventricle, c= internal width of the vault at level of C, D= maximum internal width of the vault. Significant values are in **bold**.

Table S3. Univariate analysis of the ventricular indices and other categorical variables. Ventricular indices are dichotomized at clinically relevant cut-off values, according to the AUC of the ROC curves. All major endpoint, as well as older age, clipping, severe SEBES, IVH, DC and infectious parameters are significantly correlated to higher ventricular indices.

| Parameter | Bifrontal ratio ≥ 0.337 | Bicaudate ratio ≥ 0.175 | | Evans' index ≥ 0.281 | | Ventricular ratio ≥ 0.559 | | Huckman's index ≥ 5.48 | | 3rd ventricle ratio ≥ 0.053 | |
|-------------------------|-------------------------|-------------------------|------------------|----------------------|------------------|---------------------------|------------------|------------------------|------------------|-----------------------------|--------------------------|

| Mechanical ventilation, days | 6.85 (± 5.97) | 7.42 (± 6.20) | 0.204 |
| Vasospasm on TCD, days | 2.78 (± 3.47) | 2.04 (± 3.03) | 0.009 |

Abbreviations: AUC= area under the curve, ROC= receiver operating characteristics, ICP= intracranial pressure, CRP= C-reactive protein, CSF= cerebrospinal fluid, IL-6= interleukin-6, WBC= white blood cells count, TCD= transcranial Doppler sonography. Significant findings are in **bold**.

Table S5. Multivariate analyses of the predictors of the secondary study endpoints using binary logistic regression with obligatory inclusion of major confounders (patients' age and WFNS, Fisher and SEBES grades at admission) enhanced by the ventricle indices included in the stepwise backward regression model (only the last steps are shown here). For the multivariate analysis of the predictors of mean 14-days CSF IL-6, bacterial meningitis was included as an additional confounder to the prediction model. The continuous endpoints were dichotomized according to the common reference values or the mean/median values within the analyzed cohort. Only the last step of each multivariate analysis is shown.

| Decompressive craniectomy (DC) | | | | |
|---|--------------|-------------|-------------|-------------------|
| Age >55 years | 0.77 | 0.51 | 1.16 | 0.211 |
