

**Figure S1** Division of the chest into lung fields [30]

(a) anterior:

- *upper field* – the supraclavicular fossa and the 1<sup>st</sup> intercostal space (**aUL** – anterior upper left, **aUR** – anterior upper right);
- *middle field* – the 2<sup>nd</sup> and the 3<sup>rd</sup> intercostal space (**aML** – anterior middle left, **aMR** – anterior middle right);
- *lower field* – from the 4<sup>th</sup> intercostal space to the lung base (**aLL** – anterior lower left, **aLR** – anterior lower right)

(b) posterior:

- *upper field* – from the apex of the lung to the 3<sup>rd</sup> intercostal space (**pUL** – posterior upper left, **pUR** – posterior upper right);
- *middle field* – from the 4<sup>th</sup> to the 6<sup>th</sup> intercostal space (**pML** – posterior middle left, **pMR** – posterior middle right);
- *lower field* – from the 7<sup>th</sup> intercostal space to the lung base (**pLL** – posterior lower left, **pLR** – posterior lower right)

R – right, L – left, 1 – parasternal line, 2 – midclavicular line, 3 – anterior axillary line, 4 – midaxillary line,

5 – posterior axillary line, 6 – scapular line, 7 – paravertebral line

**Table S1** Modified Chrispin-Norman score [35,36]

<b>feature</b>	<b>not present</b>	<b>present, not marked</b>	<b>marked</b>
<b>overinflation</b>			
diaphragmatic depression	0	1	2
chest wall shape	0	1	2
lung fields	0	1	2
<b>bronchial line shadows</b>			
right upper zone (RU)	0	1	2
left upper zone (LU)	0	1	2
right lower zone (RL)	0	1	2
left lower zone (LL)	0	1	2
<b>ring shadows</b>			
RU	0	1	2
LU	0	1	2
RL	0	1	2
LL	0	1	2
<b>mottled shadows</b>			
RU	0	1	2
LU	0	1	2
RL	0	1	2
LL	0	1	2
<b>large soft shadows</b>			
RU	0	1	2
LU	0	1	2
RL	0	1	2
LL	0	1	2

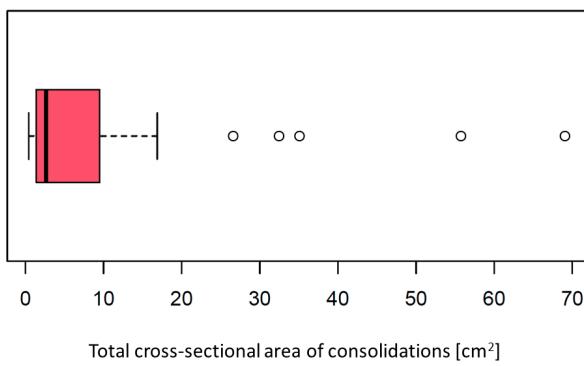

maximum score – 38 points

**Table S2** Strength of agreement depending on the value of the  $\kappa$  coefficient [45]

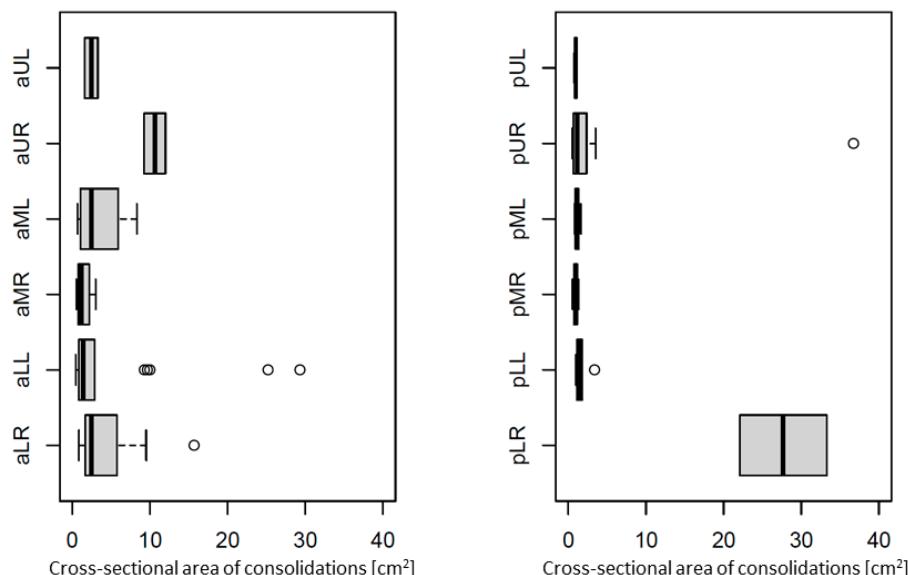

<b><math>\kappa</math> coefficient value</b>	<b>strength of agreement</b>
< 0.20	slight
0.21 - 0.40	fair
0.41 - 0.60	moderate
0.61 - 0.80	good
0.81 - 1.00	very good

**Table S3** Guilford's interpretation of the magnitude of correlation [48]

<b>R-value</b>	<b>interpretation</b>
$ R  = 0$	lack of correlation
$0.0 <  R  \leq 0.1$	slight, almost negligible correlation
$0.1 <  R  \leq 0.3$	low correlation
$0.3 <  R  \leq 0.5$	moderate correlation
$0.5 <  R  \leq 0.7$	high correlation
$0.7 <  R  \leq 0.9$	very high correlation
$0.9 <  R  < 1.0$	almost complete correlation
$ R  = 1$	complete correlation

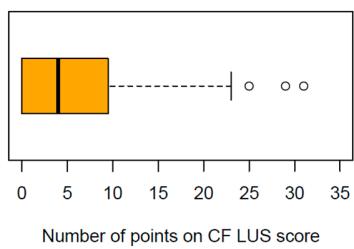

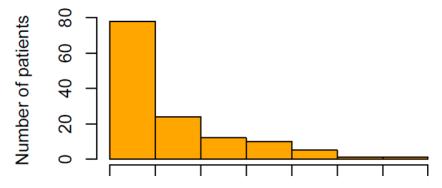

**Figure S2.** Total cross-sectional area of consolidations

**Figure S3.** Cross-sectional area of consolidations in individual lung fields

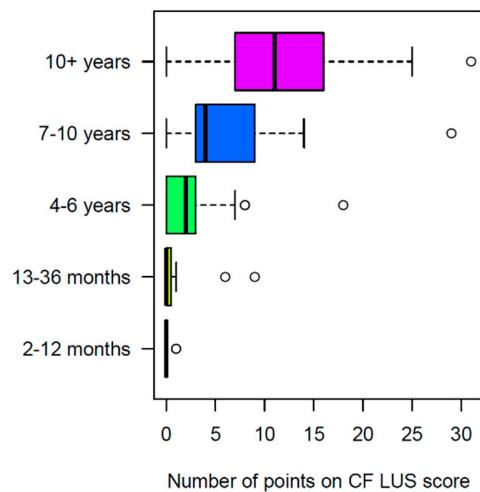

lung fields: **aUL** – anterior upper left, **aUR** – anterior upper right, **aML** – anterior middle left, **aMR** – anterior middle right, **aLL** – anterior lower left, **aLR** – anterior lower right, **pUL** – posterior upper left, **pUR** – posterior upper right, **pML** – posterior middle left, **pMR** – posterior middle right, **pLL** – posterior lower left, **pLR** – posterior lower right

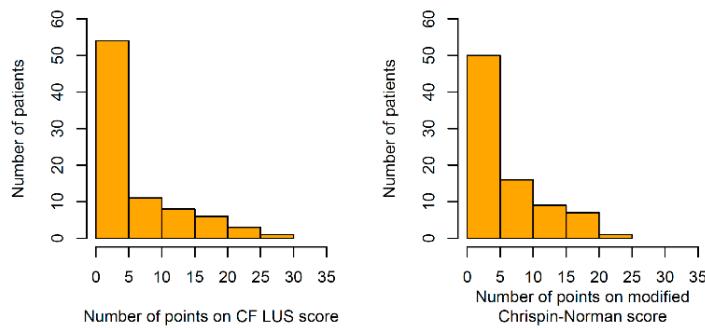

**Figure S4.** Distribution of the number of points on the CF LUS score in the study group

**Table S4.** Number of points on the CF LUS score in individual age groups

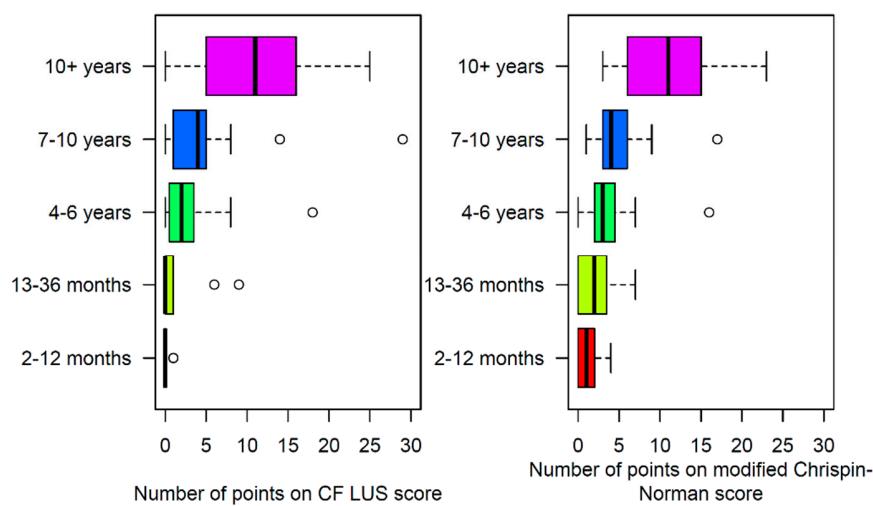

age group	number of children	number of points on CF LUS score		
		mean $\pm$ SD	median [Q1; Q3]	[min; max]
infants (2–12 months)	16	$0.13 \pm 0.34$	0 [0.0; 0.0]	[0; 1]
toddlers (13–36 months)	15	$1.13 \pm 2.67$	0 [0.0; 0.5]	[0; 9]
preschoolers (4–6 years)	29	$2.72 \pm 3.81$	2 [0.0; 3.0]	[0; 18]
middle childhood (7–10 years)	22	$6.14 \pm 6.36$	4 [3.0; 8.8]	[0; 29]
teenagers (10+ years)	49	$11.76 \pm 6.82$	11 [7.0; 16.0]	[0; 31]

**Figure S5.** Distribution of the number of points on the CF LUS score in individual age groups

**Figure S6.** Distribution of the number of points on the ultrasound and radiographic scores

**Figure S7.** Comparison of the number of points in individual age groups for ultrasound and radiographic scores

**Table S5.** Interobserver agreement for assessing the incidence of I-lines

lung field	$\kappa$ values	95% CI	lung field	$\kappa$ values	95% CI
aUL	0.42	[0.08; 0.69]	aUR	0.53	[0.20; 0.77]
aML	0.63	[0.31; 0.85]	aMR	0.63	[0.31; 0.85]

**Figure S8.** Comparison of the total cross-sectional area of consolidations obtained by two sonographers

S1 – first sonographer, S2 – second sonographer, b – slope of simple linear regression, 95%CI [0.81; 1.05]

**Table S13** Comparison of ultrasound scores in CF

	Peixoto 2019 [22]	Strzelczuk- Judka 2019 [23]	Peixoto 2020 [24]	Ciuca 2022 [26]	Jaworska 2023
assessed ultrasound signs	numerous B-lines	+	+	+	+
	confluent B-lines	—	+	—	+
	consolidations	+	+	+	+
	atelectasis distinguished from other consolidations	—	—	—	+
	equivalent of bronchiectasis	—	—	—	* Am-lines
	pleural line abnormalities	—	+	+	—
	pleural fluid	—	+	—	—
number of assessed lung fields	12	4	12	12	12
max. possible score	36	40	36	—	44
max. number of points obtained in the study group	18	16	18	21	31
correlation between LUS score and	CXR score	—	R = 0.52	—	—
	chest CT score	—	—	par. cor. = 0.61	R = 0.87
	age	—	—	—	—
	LCI	—	—	—	R = 0.70
	FEV1	—	—	par. cor. = -0.54	R = -0.65
					R = -0.63

\* The following US signs were considered the equivalent of bronchiectasis: 1. > 3 B-lines and 1 coalescent B-line; 2. > 2 coalescent B-lines; 3. bronchial wall thickening or subpleural consolidations < 10 mm

LUS – lung ultrasound, CXR – chest X ray, CT – computed tomography, LCI – lung clearance index, FEV1 – forced expiratory volume in 1 second, R – Pearson's correlation coefficient, par. cor. – partial correlation
