All variables including demographics, prehospital and in-hospital CPR variables, medications, and initial laboratory and electrocardiographic findings were analyzed using a logistic regression model. Variables showing  $p < 0.1$  in univariate analysis were entered into multiple logistic regression analysis. Abbreviations: CI, confidence interval; CK-MB, creatinine kinase MB fraction; CPR, cardiopulmonary resuscitation; ED, emergency department; QTc, corrected QT segment; VT, ventricular tachycardia; ROSC, return of spontaneous circulation; CAG, coronary artery angiography; TTM, target temperature management.
