

Recruited (2010–2016) n = 110

Patients who could not be followed up (n = 2)

Family members from 12 out of 108 pedigrees (n = 15)

Enrolled n = 123

Figure S1. Patient selection flowchart. From 110 initially patients screened, 2 patients who could not be followed up were excluded from participation. The remaining 108 patients and 15 family members from 12 out of 108 pedigrees who attended our hospital were ultimately enrolled in the present study.
