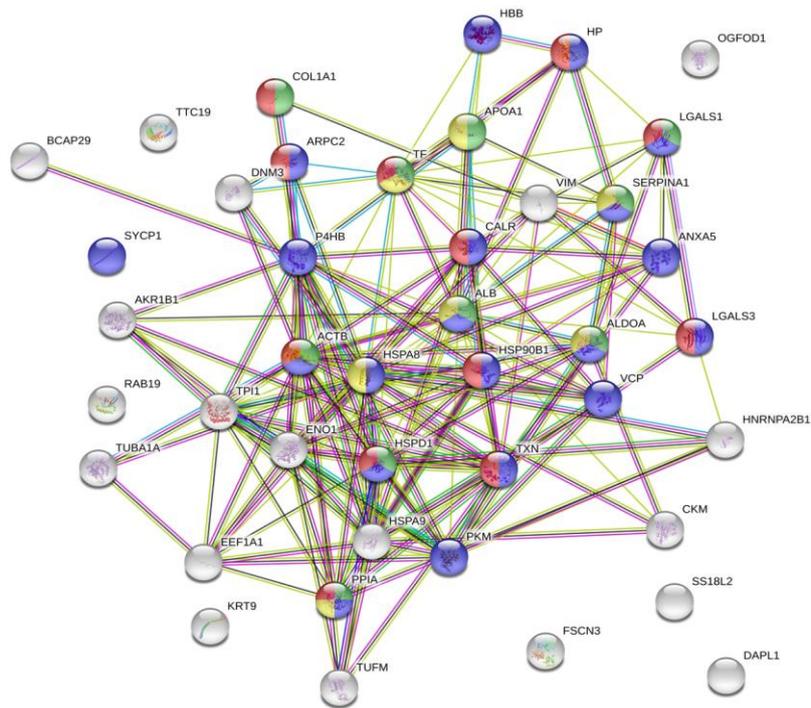

Figure S1: Protein-protein interaction network visualized by STRING database. Interactome derived from the proteins listed in Table S1 using String algorithm. Colours highlight the three top significantly biological processes (response to stress, secretion by cell and immune system process) involved in the protein-protein interrelationships.

Table S2: Proteome and secretome list of the modulated proteins.

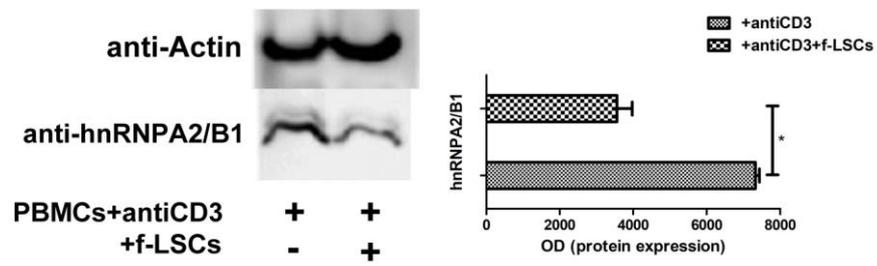

Figure S2: Western blot immunodetection of hnRNPA2/B1 protein. Monodimensional Western blot of hnRNPA2/B1 protein detected by silver stain proteomics is shown (left panel). The respective intensity level of each reactive band in activated PBMCs of AED patients before and after f-LSC treatment is reported in the histogram (right panel).

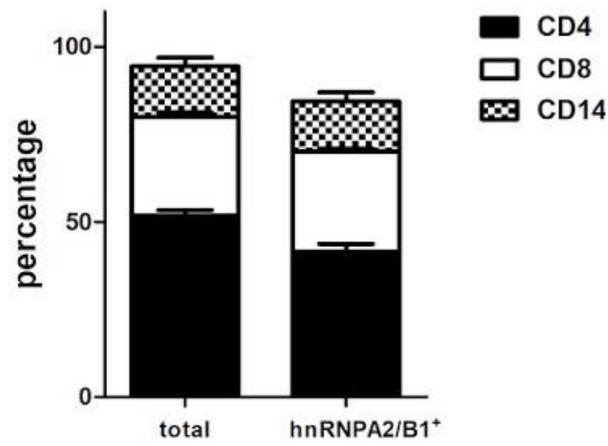

Figure S3. Flow cytometry analysis for hnRNPA2/B1 and CD4+, CD8+ and CD14+ subsets in PBMCs of AED patients. Histogram shows the hnRNPA2/B1 expression pattern in fresh CD4+, CD8+ and CD14+ PBMCs collected from AED patients.
