

Supplementary Materials

Figure 1. TSG-6 upregulation in the LPS-exposed cerebellum. **(A-C)** The expression patterns of TSG-6 (red) and various cerebellar cells (green), including Purkinje cells **(A)**, microglia **(B)**, and astrocytes **(C)**, 7 days after LPS treatment in the cerebellum of a mouse's brain. TSG-6 expression increased in the cerebellum after LPS injection and mainly colocalized with astrocytes and Purkinje cells. Scale bar = 50 μ m.
