Figures

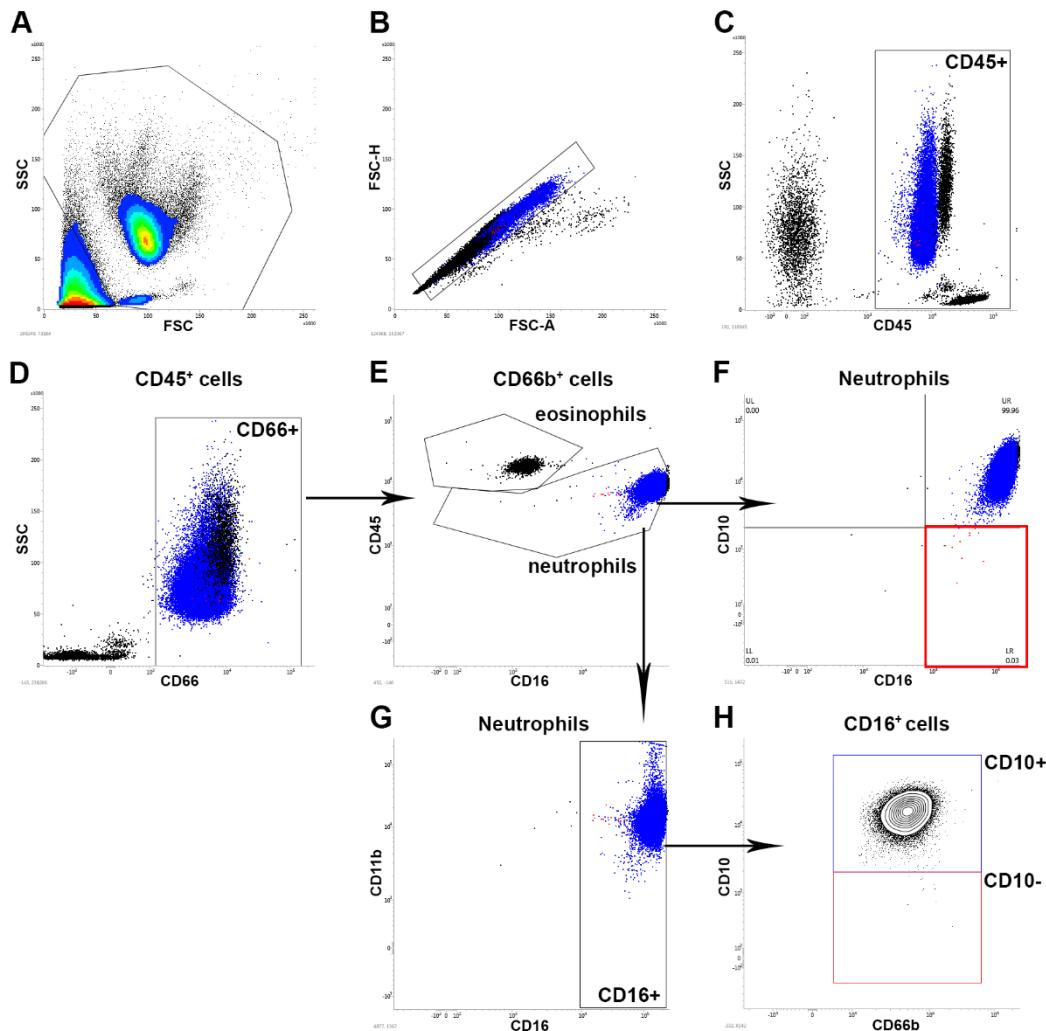

Figure S1. Gating strategy for NDN and LDN phenotypic analysis by flow cytometry. Representative plots of granulocytic fraction from chronic stable coronary artery disease patients (Ficoll gradient). (A) All events in forward scatter (FSC)-side scatter (SSC) plot. (B) Exclusion of doublets and cell aggregates. (C) Selection of CD45⁺ cells (white blood cells). (D) CD66b⁺ cells are selected among CD45⁺ cells. (E) Selection of CD45⁺CD66b⁺CD16⁺ neutrophils and exclusion of CD45^{high}CD66b⁺CD16^{low/-} eosinophils. (F) Plot of CD10 and CD16 expression on neutrophil surface. The red box depicts a CD10^{-/low}CD16^{int}CD11b⁺ neutrophil subpopulation corresponding to immature band cells. (G) Plot of CD11b and CD16 expression on neutrophil surface. (H) CD16^{+/high} neutrophils according to CD10⁺ and CD10⁻ phenotypes.

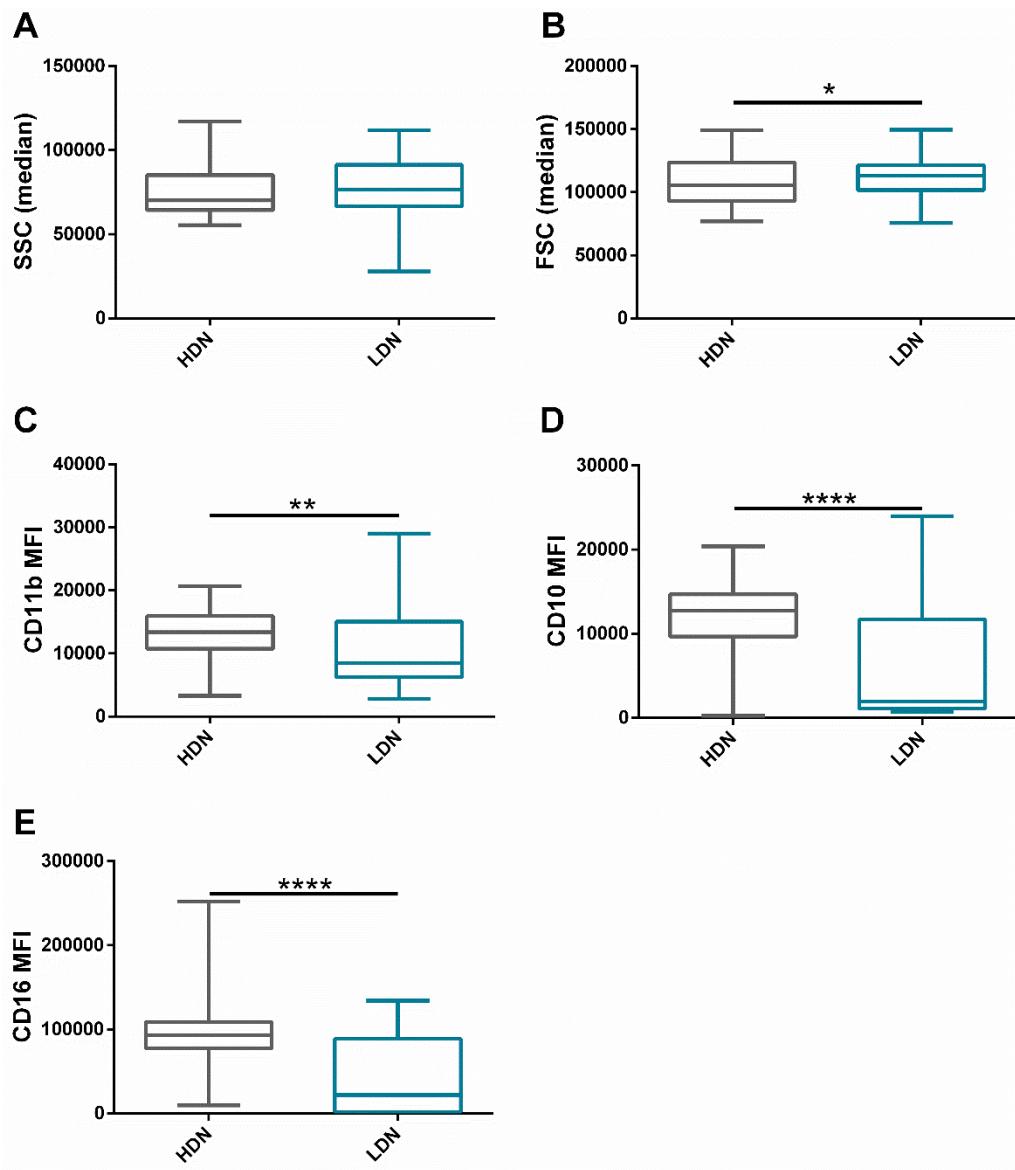

Figure S2. Comparison between HDNs and LDNs from CAD patients. Flow cytometry analysis of HDN and LDN from granulocytic and PBMC fraction of patient blood. Data represent medians of fluorescence intensity of indicated markers with minimum and maximum range. * $p<0.05$; ** $p<0.01$; **** $p<0.0001$ (Mann-Whitney test).
