

Supplementary table 1 - Multivariate regression analysis, model adjusted for gender and gender interaction.

Parameter	Odds Ratio	95% Confidence Interval	
		Lower	Upper
Choice Group: Cannabis vs Multiple substances use			
Gender by psychotic disorders diagnosis	0	0	0
Gender by affective disorders diagnosis	1.5	0.024	92.25
Gender	0.167	0.02	1.384
Psychotic disorder diagnosis	45740	45740	45740
Affective disorder diagnosis	1	0.063	15.988
Choice Group: Alcohol vs Multiple substances use			
Gender by psychotic disorders diagnosis	0	0	0
Gender by affective disorders diagnosis	4.5	0.174	116.084
Gender	0.167	0.02	1.384
Psychotic disorder diagnosis	0	0	0
Affective disorder diagnosis	4	0.447	35.788

Supplementary table 2. Multivariate regression: multivariate analysis estimating diagnostic impact on analyzed parameters – fully adjusted model.

	95% Confidence Interval		
	OR	lower	upper
Threshold [psychotic disorder]	59.06	-2779.73	2661.61
Location gender	13.34	-4608.20	4634.89
