

## SUPPLEMENTARY MATERIAL

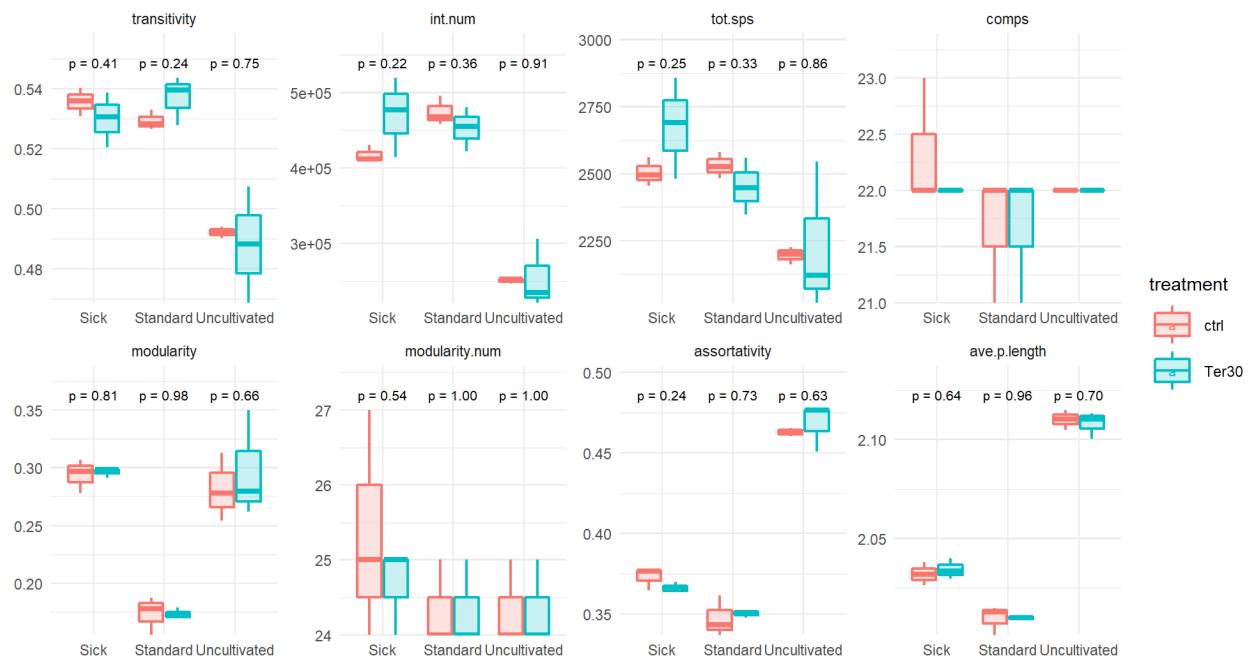

**Figure S1** Harvest yield (kg/Ha), plant perimeter (cm) and leaf chlorophyll content (CCI) phenotype comparison among Terramin 15, Terramin 30 and the control condition. P- values shown in the top of the facets indicate the significance of ANOVA test. Significant differences between groups are indicated as follows: \* (p-value <0.05), \*\* (p-value < 0.005), \*\*\* (p-value < 0.0005), \*\*\*\* (p-value < 0.00005).

**Figure S2** Relative abundance at family level of the archaeal and bacterial (Panel A) and fungal microbiota (Panel B), before and after treatment with Terramin 30 and control condition in standard, sick and uncultivated soil types.

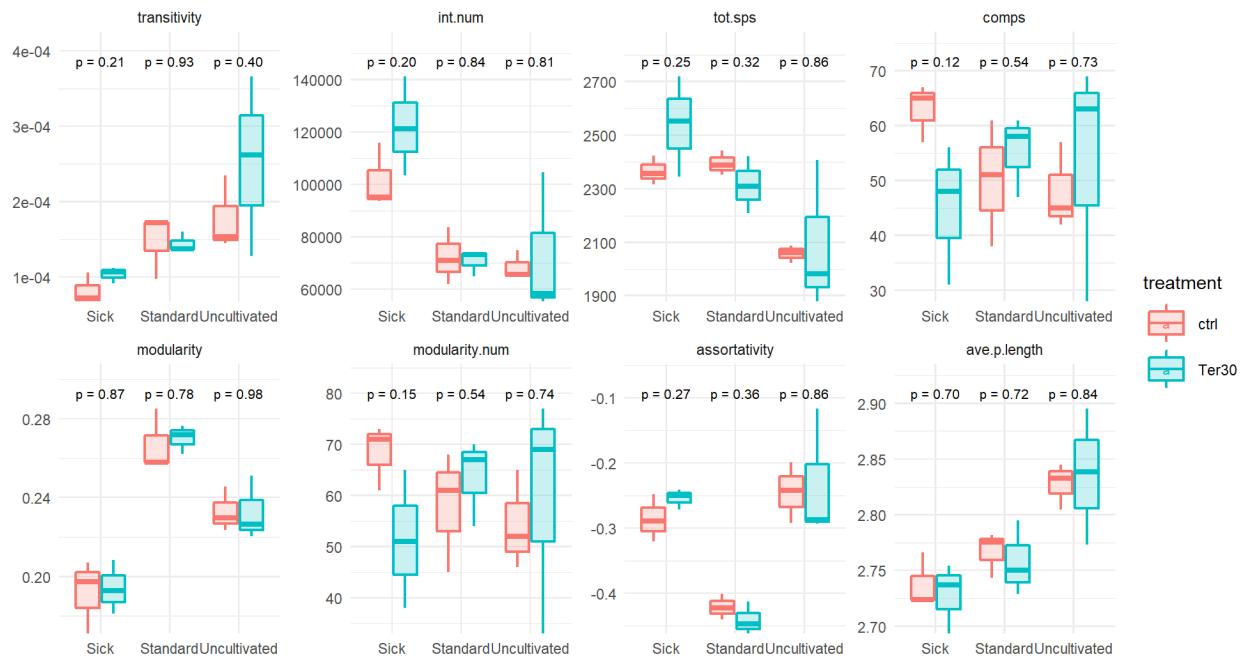

### enriched

16S

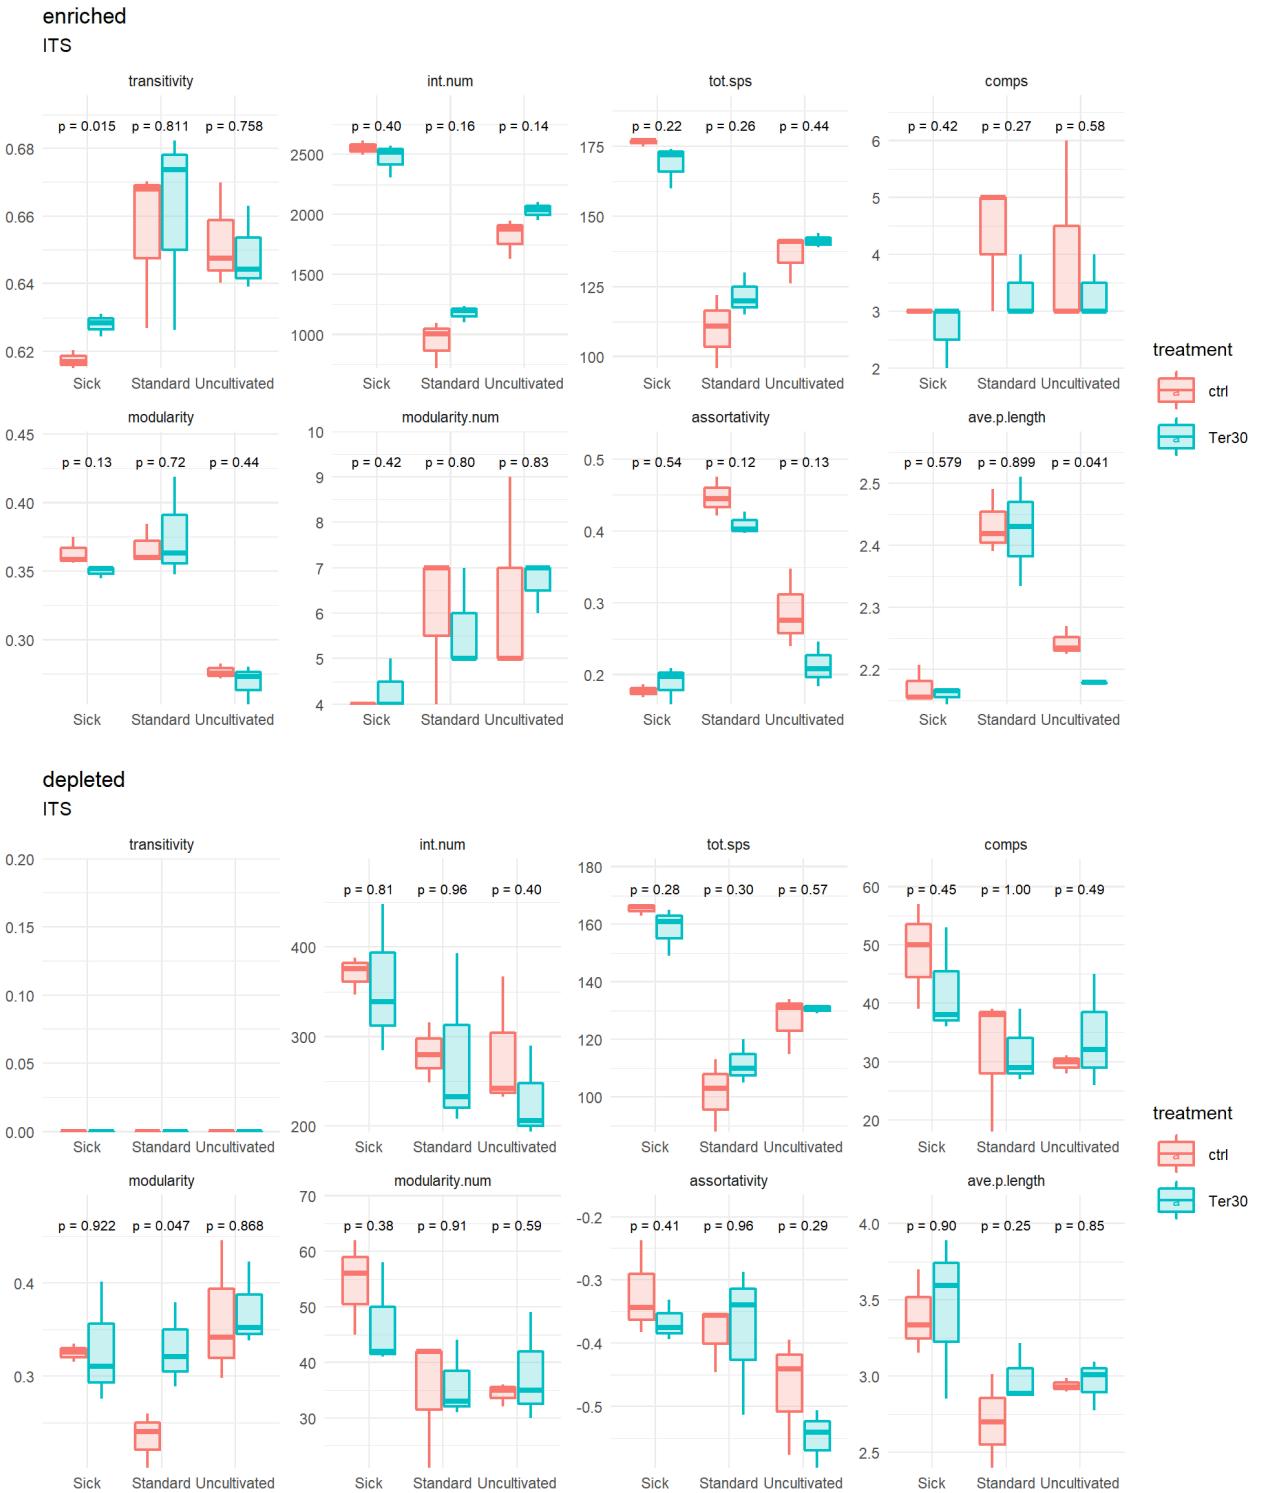

### depleted

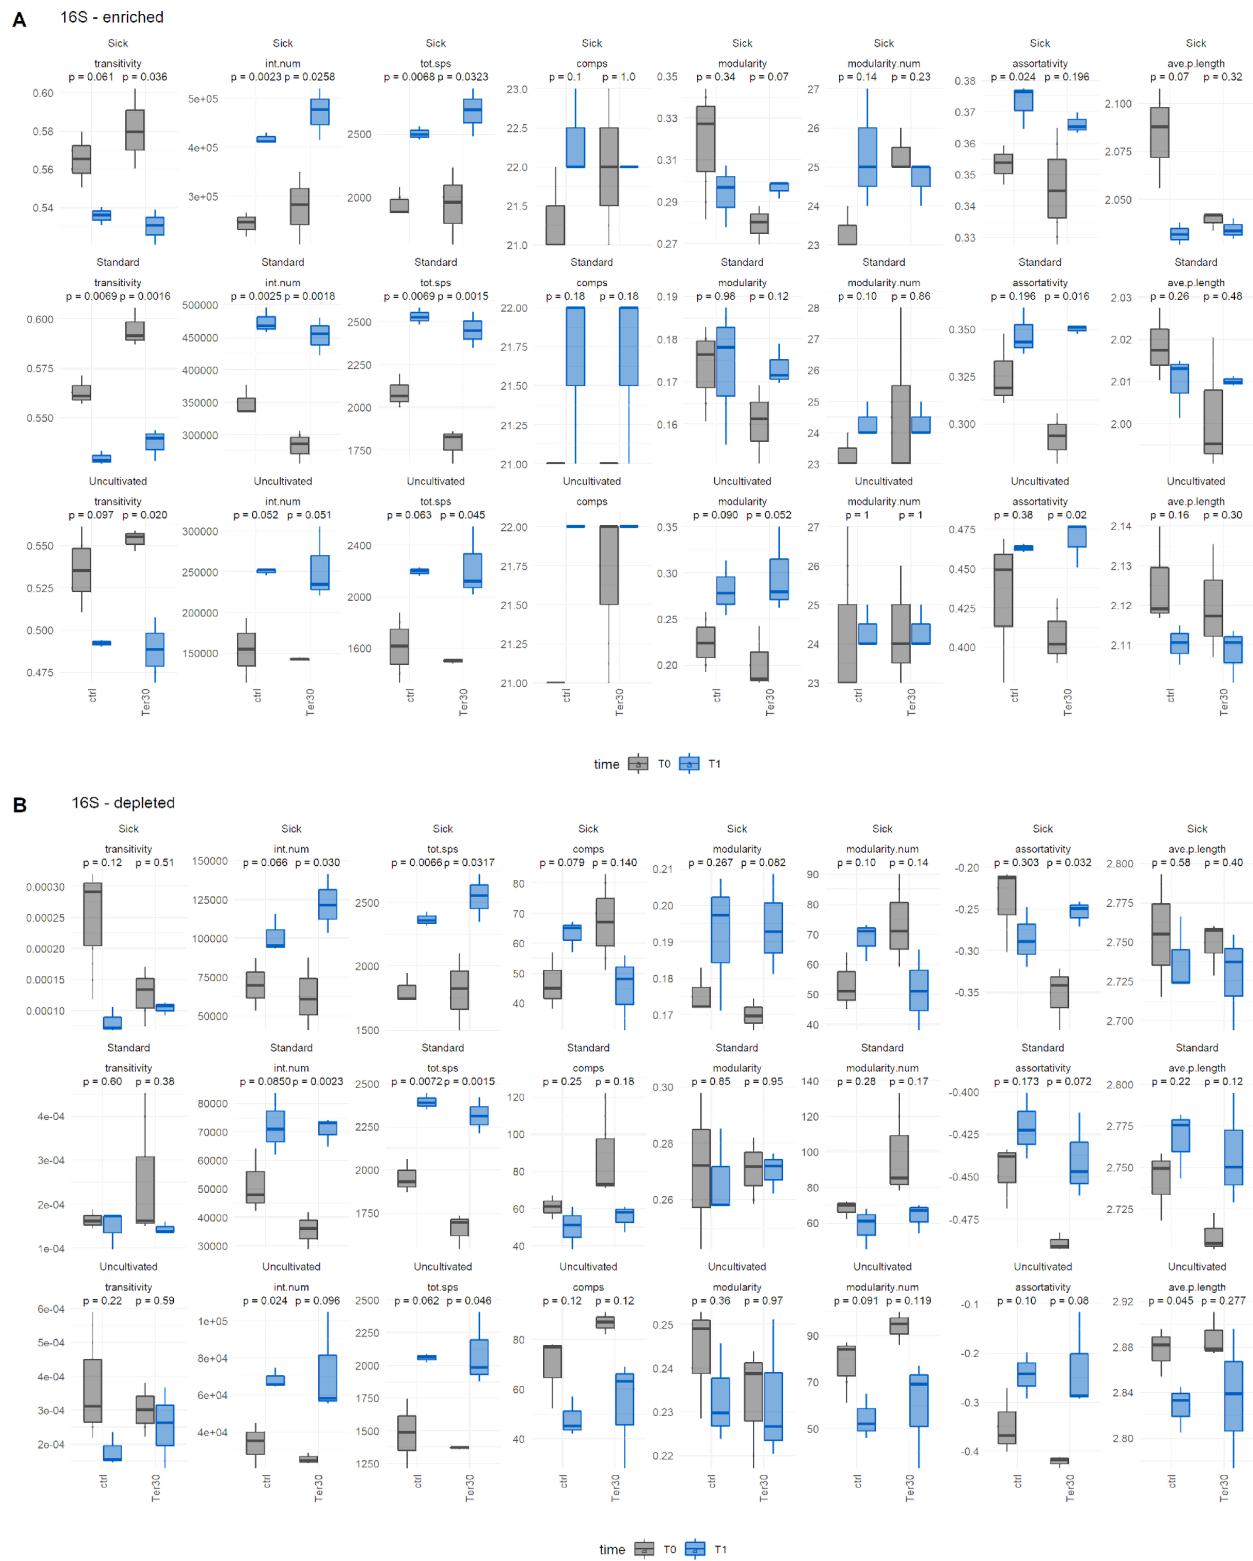

16S

**Figure S3** Network properties comparison between control and terramin 30 conditions after treatment for 16S marker P-values represent the resulting pairwise statistical significance level between conditions.

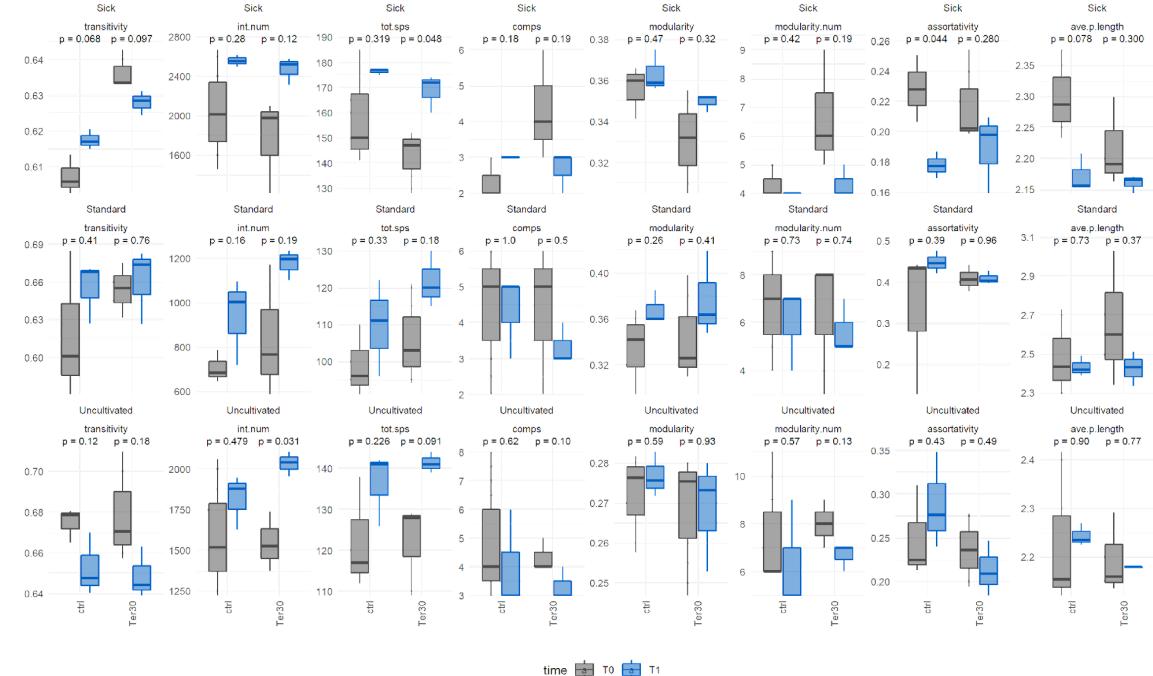

**Figure S4** Network properties comparison between control and terramin 30 conditions after treatment for 16S marker P-values represent the resulting pairwise statistical significance level between conditions.

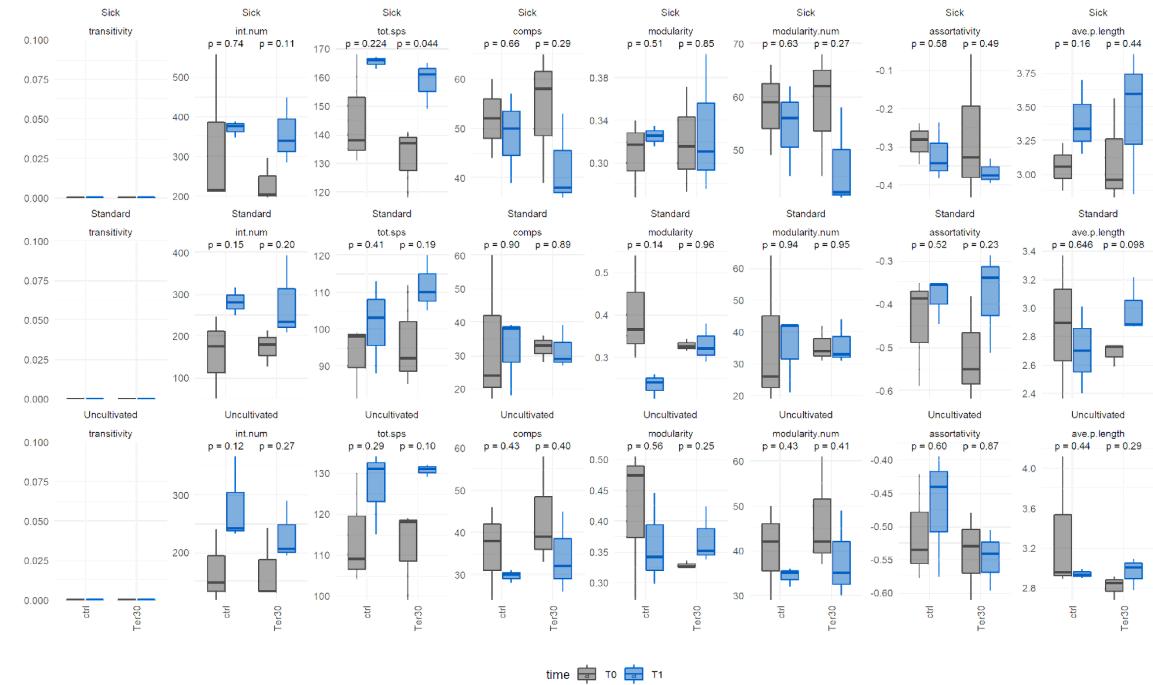

**Figure S5** Network properties comparison before and after treatment for Terramin 30 and control conditions for 16S marker. P-values represent the resulting pairwise statistical significance level between conditions.

**A ITS - enriched**

**B ITS - depleted**

**Figure S6** Network properties comparison before and after treatment for Terramin 30 and control conditions for ITS marker. P-values represent the resulting pairwise statistical significance level between conditions.

**Table S1** Physicochemical characteristics of standard, sick and uncultured soils

<b>Soil type</b>	<b>Standard</b>	<b>Sick</b>	<b>Uncultured</b>
% Sand	55.06	53.42	47.42
% Loam	21.57	25.14	31.06
% Clay	23.37	21.44	21.51
Texture	Sandy clay loam	Sandy clay loam	Loam
pH (extract 1:2.5)	8.62	9.09	9.12
C.E. (dS/m) (extract 1:5)	0.31	0.23	0.19
Na (meq/100 g)	0.59	0.60	0.70
K (meq/100 g)	0.96	1.69	0.96
