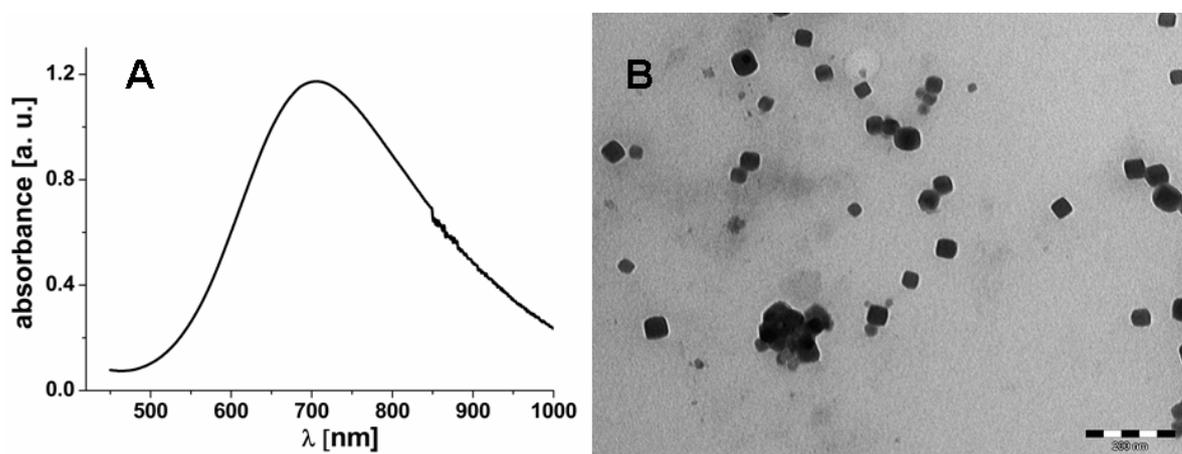

Figure S1. A: absorbance spectrum of PB stock aqueous solution (diluted 36 times); B: representative TEM image of PB nanoparticles.

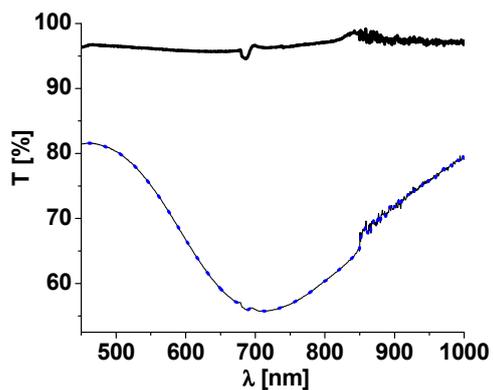

Figure S2A. The transmittance spectra of sprayed films (10 layers) with (blue line) and without (black line) Prussian Blue nanoparticles

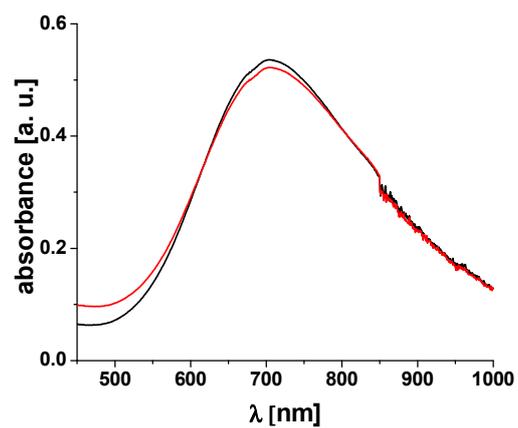

Figure S2B. Absorbance spectra of PB spray formulation immediately after preparation (black line) and after 4 weeks of storage (red line)

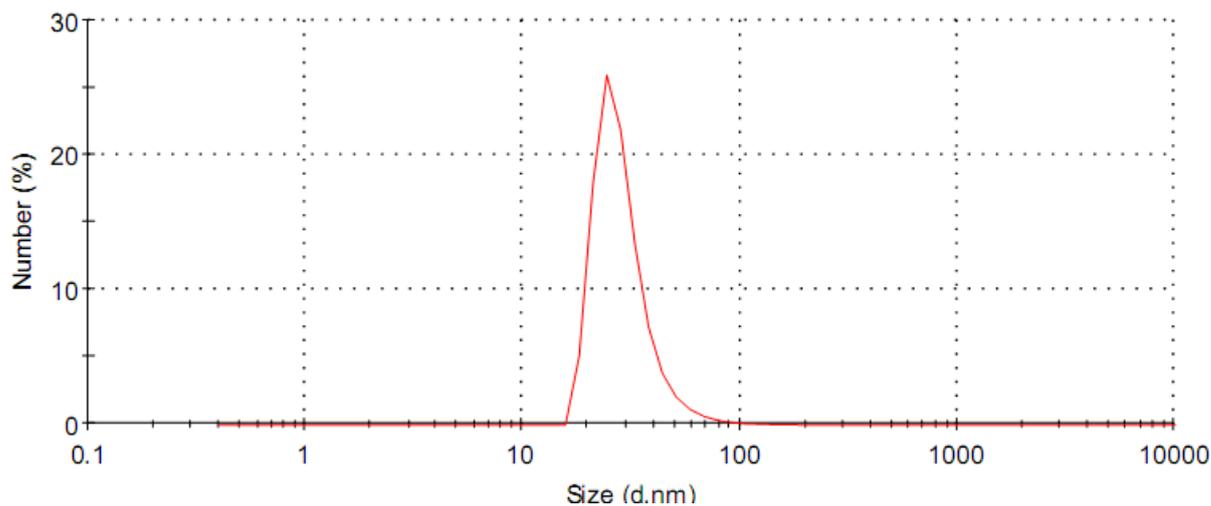

Figure S3. Size distribution of PB nanoparticles in spray solution after 4 weeks of storage

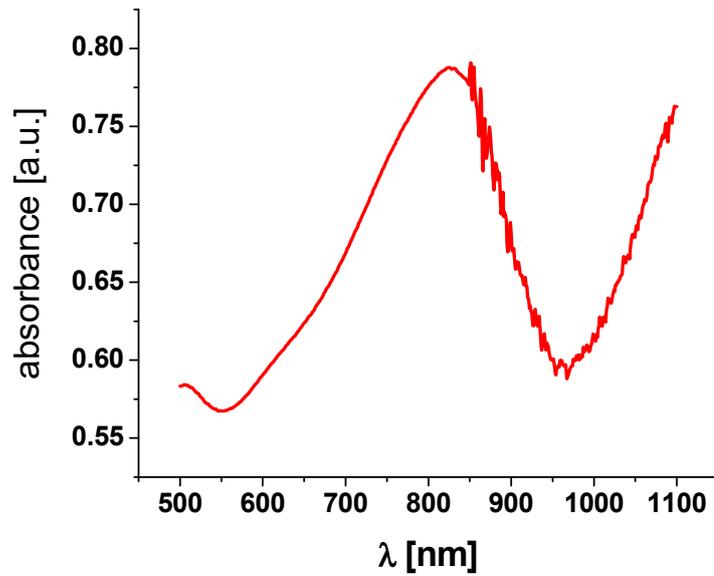

Figure S4. Absorbance spectrum of GNS stock aqueous solution (diluted 7 times)

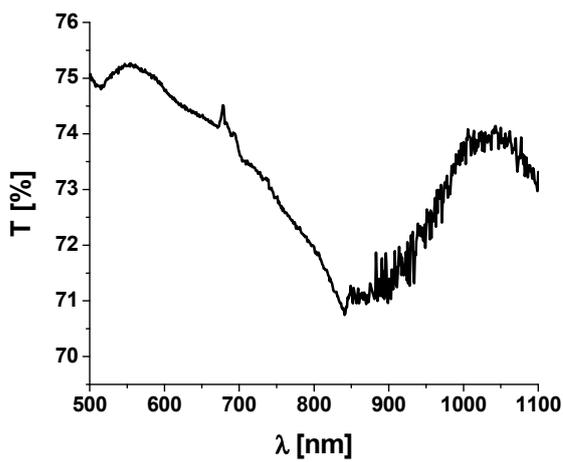

Figure S5A. The transmittance spectra of sprayed (10 layers) GNS-PVA film

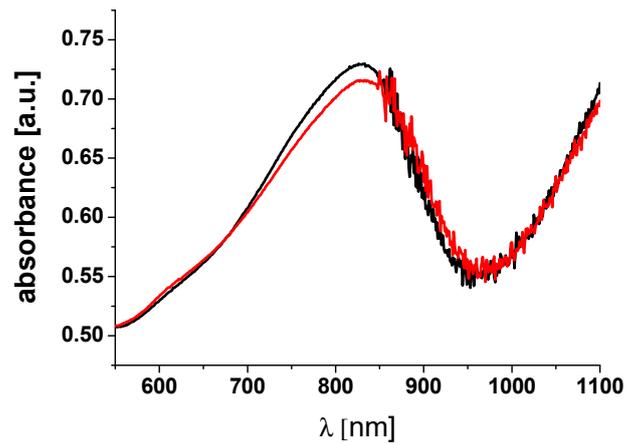

Figure S5B. Absorbance spectra of GNS spray formulation immediately after preparation (black line) and after 4 weeks of storage (red line)

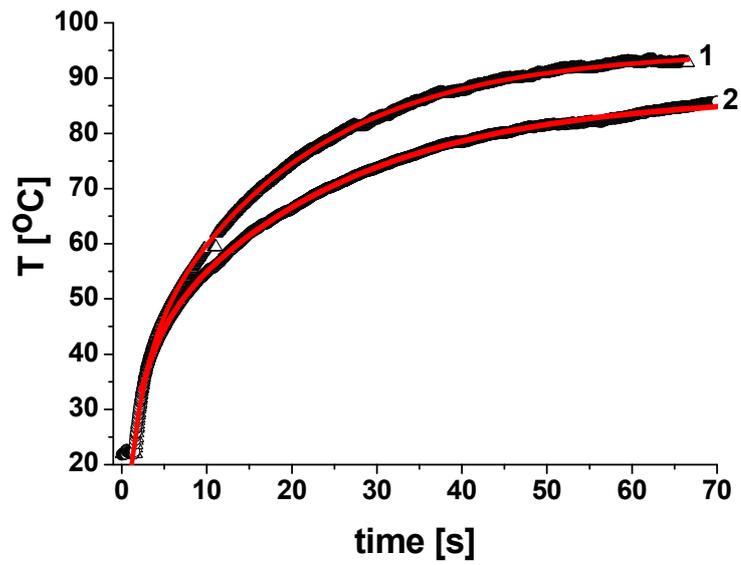

Figure S6. The temperature increase of sprayed film under irradiation with 700 nm and laser intensity of 0.63 W/cm^2 (1) and 0.51 W/cm^2 (2). The data are best fit to double exponential growth (solid red lines).

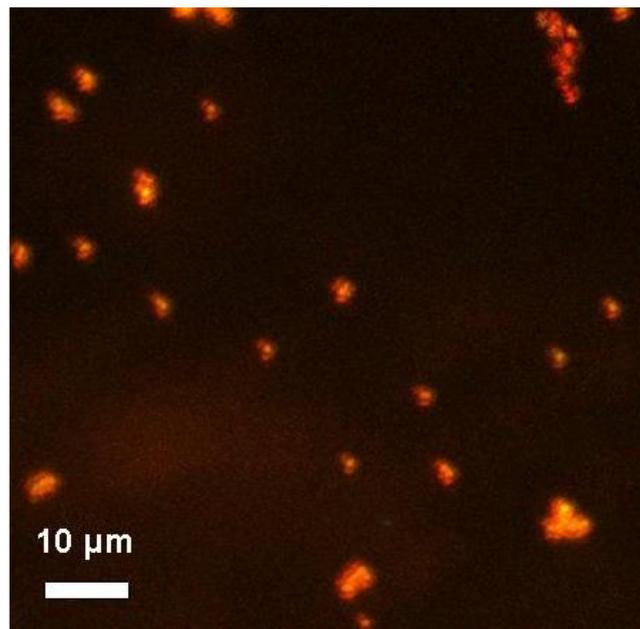

Figure S7. Representative confocal image of *S. aureus* bacteria after 30 min of NIR irradiation at 0.63 W/cm^2 . Field of view: $64.2 \times 64.2 \mu\text{m}^2$.
