Table of Content

Figure S1(a): Optimization study of precursor Cu salt ranging from 100 μ L to 450 μ L.

Figure S1(b): Optimization study of reducing agent in the range of 100 to 600 μ L

Figure S1(c): Optimization study of ranolazine ranging from 100 to 600 μ L

Figure S1(d): Optimization study showing formation of Cu NPs at pH value ranging from 5 to 11

Figure S2: FTIR spectra of pure ranolazine (black curve) and ranolazine-functionalized Cu NPs (red curve).

Figure S3: PXRD patterns of ranolazine copper nanoparticles

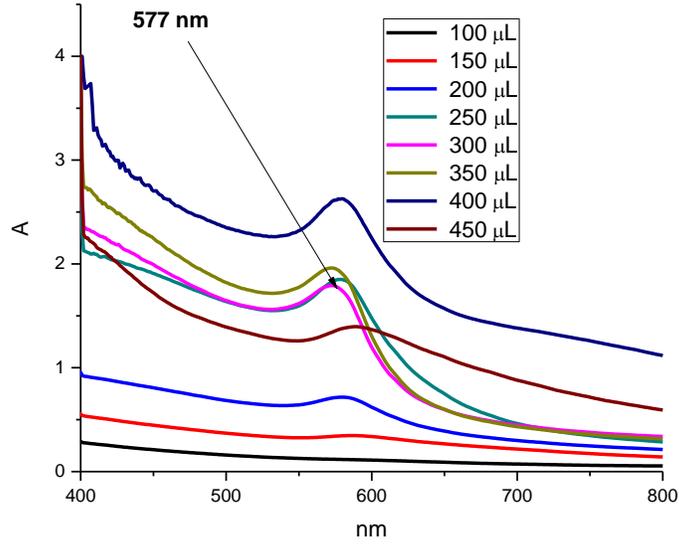

Figure S1(a): Optimization study of precursor Cu salt ranging from 100 μL to 450 μL .

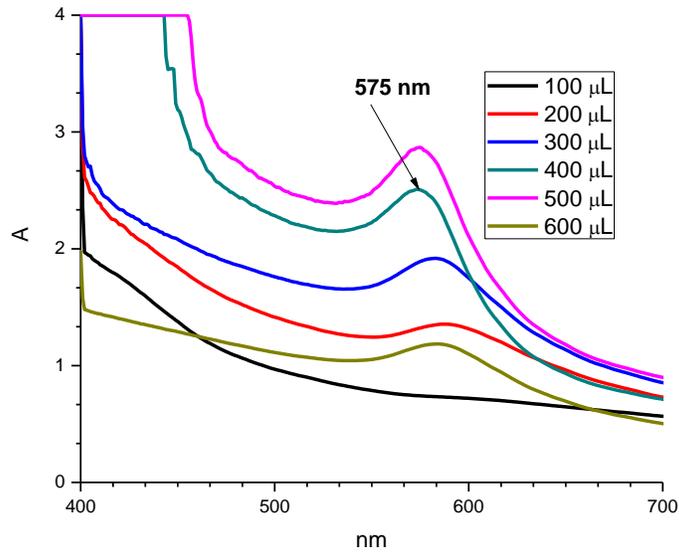

Figure S1(b): Optimization study of reducing agent in the range of 100 to 600 μL .

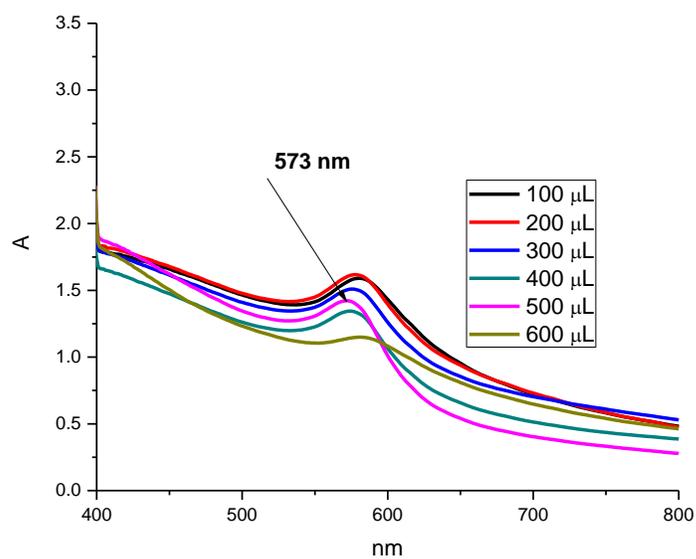

Figure S1(c): Optimization study of ranolazine ranging from 100 to 600 μL .

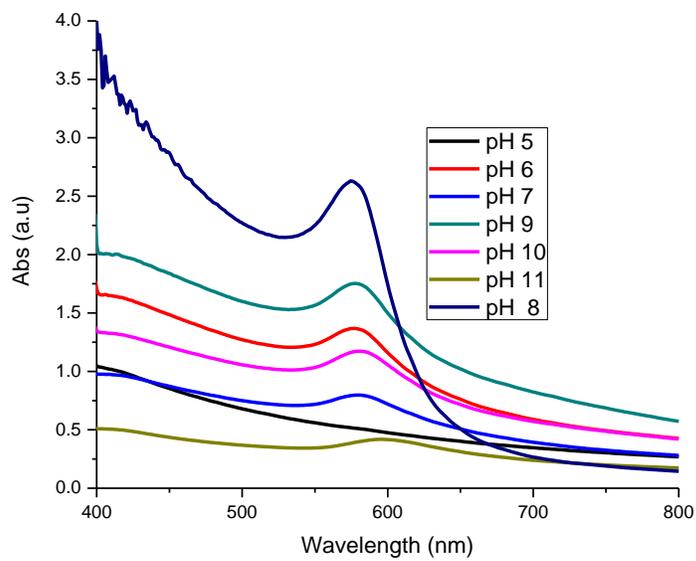

Figure S1(d): Optimization study showing formation of Cu NPs at pH value ranging from 5 to 11.

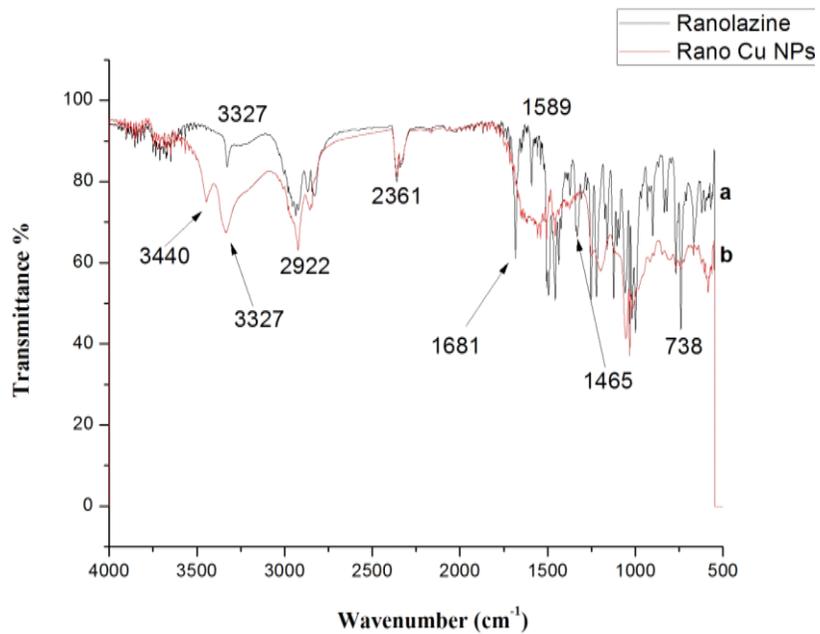

Figure S2: FTIR spectra of pure ranolazine (black curve) and ranolazine-functionalized Cu NPs (red curve).

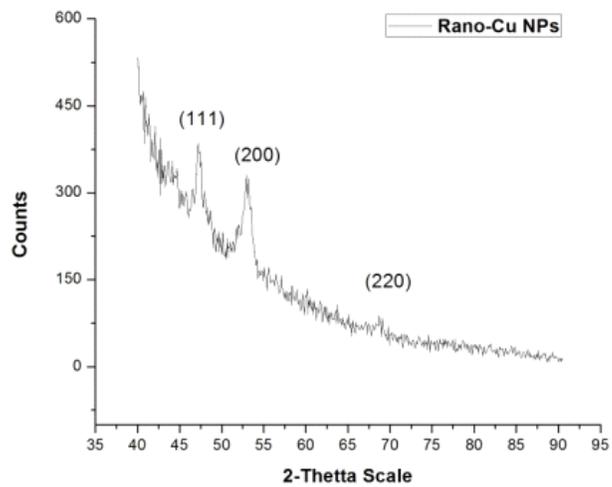

Figure S3. PXRD patterns of ranolazine copper nanoparticles.
