

Figure S1. (a) SEM and (b) TEM images of PB nanoparticles.

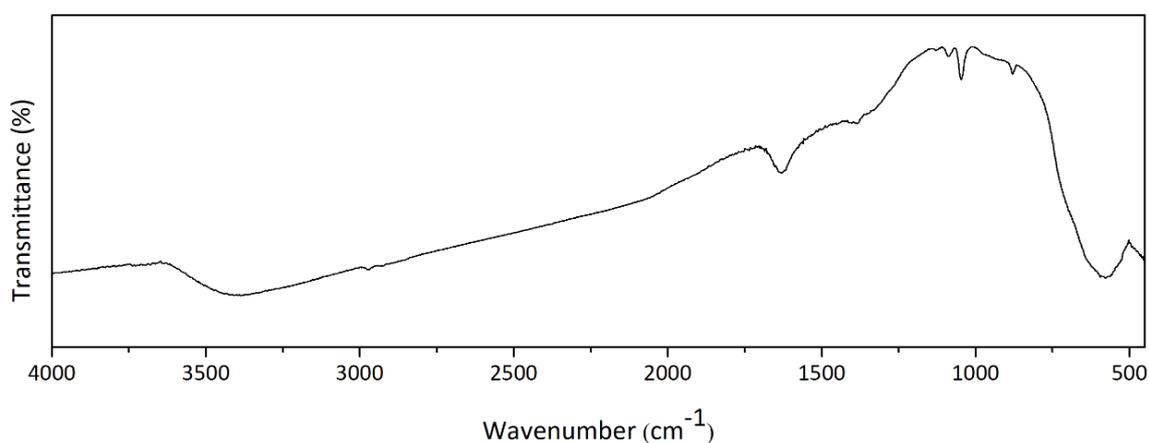

Figure S2. FTIR spectrum of iron oxide/carbon composite.

Note in Figure S2: The characteristic peaks of C=O and a broad peak of -OH disappeared, due to decreasing in various oxygen-containing functional groups^{S1,S2}. The peak around 1600 cm⁻¹ can be referred to the C=C band. The C≡N bond also disappeared, indicating to remove the C-N group by calcination. The strong vibration bands at 577 cm⁻¹ was assigned to iron oxide (Fe₂O₃)^{S3,S4}, which indicates that the conversion of PB to iron oxide during the heat treatment.
