

## Supplementary Materials

### Microbiological Contamination of the Office Environment in Dental and Medical Practice

**Table S1.** Comparison of the median microbiological contamination of surface (CFU/100 cm<sup>2</sup>) and air samples (CFU/m<sup>3</sup>) of dental (D) and general practitioner (GP) rooms.

Contamination	Air						Surfaces					
	Waiting rooms			Waiting rooms			Consulting rooms			Sterilization rooms		
	D	GP	<i>p</i> -value	D	GP	<i>p</i> -value	D	GP	<i>p</i> -value	D	GP	<i>p</i> -value
Bacteria	382	424	1	114	148	0.7	102	140	0.2	118	NA	NA
Fungi	112	460	0.3	28	64	0.3	14	44	0.07	8	NA	NA

**Table S2.** Comparison (*p*-value) of the median microbiological contamination of surfaces between the rooms of dental and general practitioner (GP) offices.

Contamination	GP's offices		Dental offices	
	Waiting <i>vs</i> consulting rooms	Waiting <i>vs</i> consulting rooms	Waiting <i>vs</i> sterilization rooms	Consulting <i>vs</i> sterilization rooms
Bacteria	0.9	0.5	0.8	0.8
Fungi	0.5	0.1	0.04	0.7
