

Figure S2: Heatmap displaying the level of bacterial reduction based on combination assays with varying dosages of phage Sb-1 (MOI 0, 10^{-5} , 10^{-3} , 10^{-1} , 10, horizontal axis) and oxacillin (0, 5, 10, 20, 50, and 100 µg/ml, vertical axis) against 27 *S. aureus* isolates SA1 to SA24 (SA10 not included) plus four ATCC strains. Red: MRSA, Blue: MSSA, Yellow: Phage-resistant isolates (all other isolates are phage sensitive)
