

Supplementary Materials:

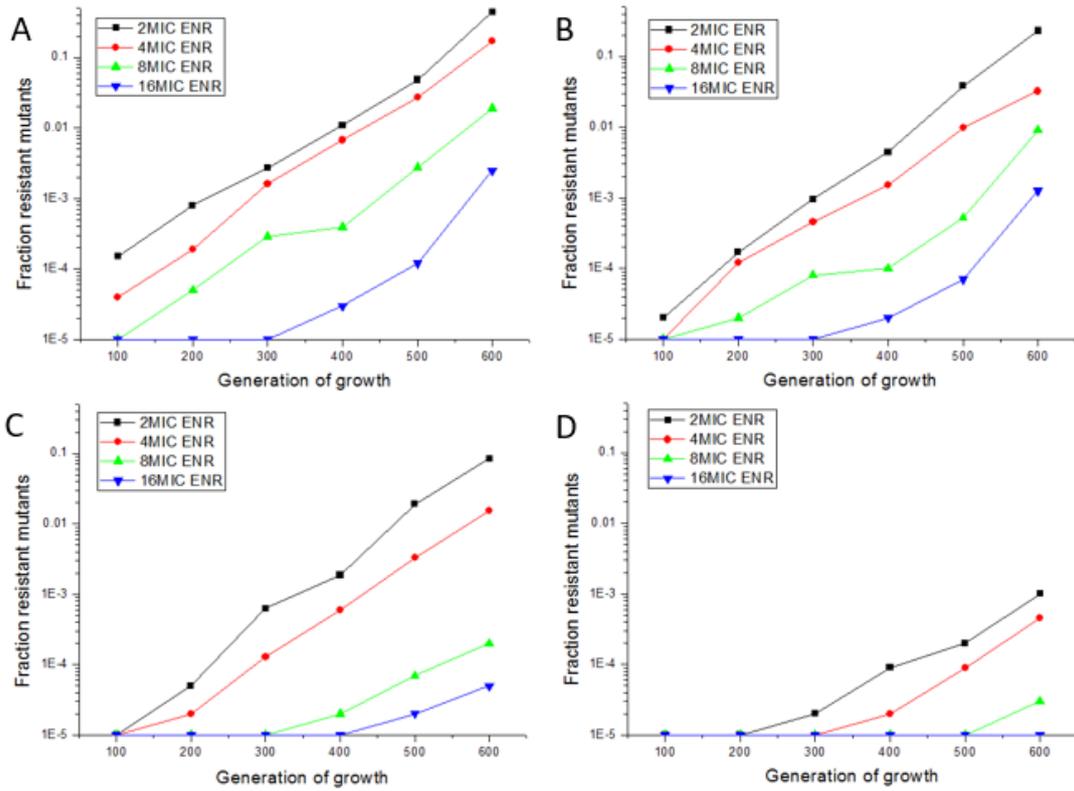

Figure S1. Resistance rates of *E. coli* ATCC25922 exposed to ENR at sub-MIC concentrations of $1/2 \times \text{MIC}$ (A), $1/4 \times \text{MIC}$ (B), $1/10 \times \text{MIC}$ (C) and $1/100 \times \text{MIC}$ (D).

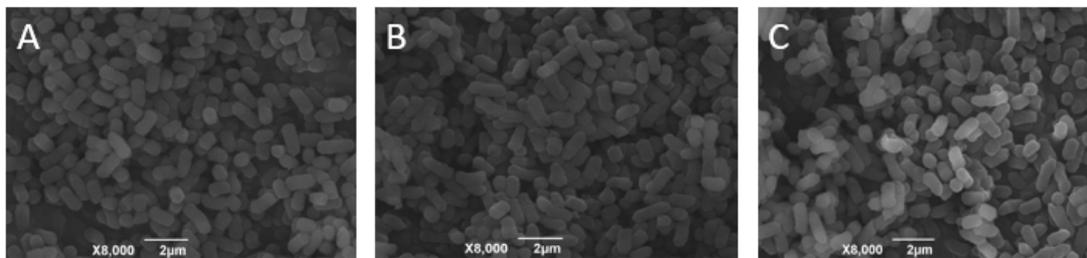

Figure S2. Scanning electron micrograph of *E. coli* ATCC25922 induced by none (A), $1/2 \times \text{MIC}$ ENR (B) and $1/2 \times \text{MIC}$ OLA (C).

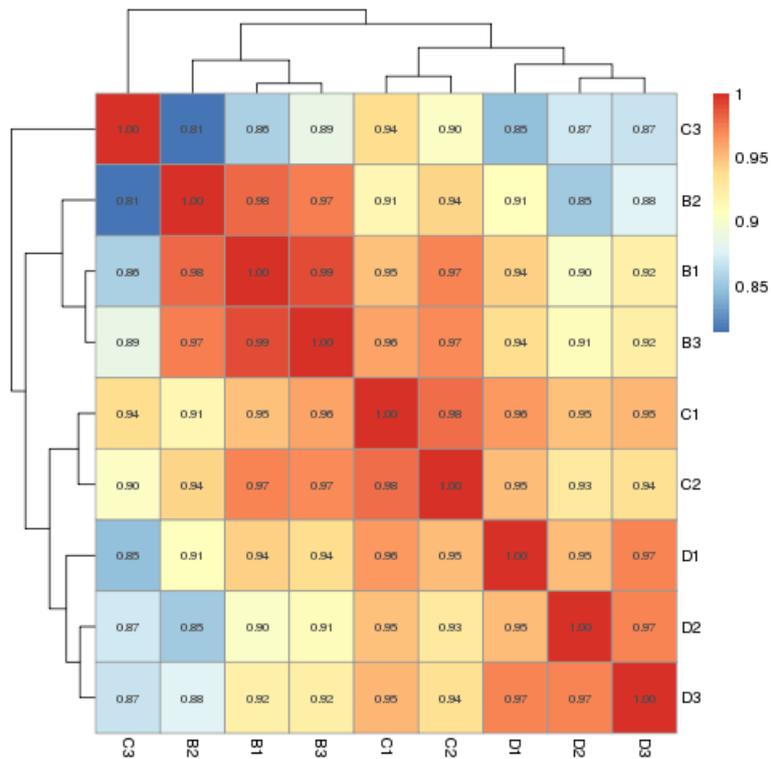

Figure S3. Correlation tests for 9 samples (triplicates in each group) of the untreated (group B), 1/2×MIC (group C) and 1/10×MIC OLA (group D)-treated *E. coli* ATCC25922. The abscissa and ordinate in the figure are sample numbers. The closer the block value is to 1, the higher the similarity is.

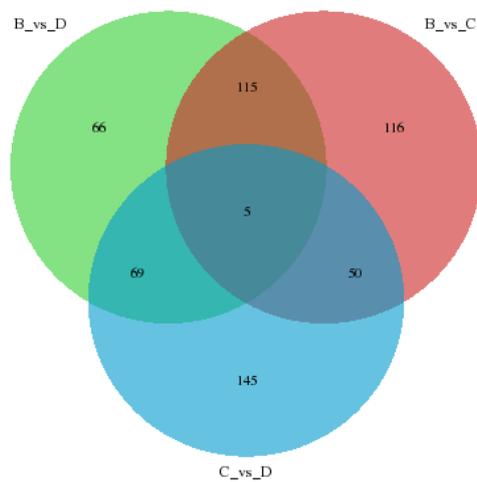

Figure S4. Venn diagrams of DEGs. The numbers in each circle represents the total number of DEGs in the comparison combination, and the overlapping part of the circles represents the DEGs shared between the comparison groups. B, untreated group; C, 1/2×MIC OLA-treated group; D, 1/10×MIC OLA-treated group.

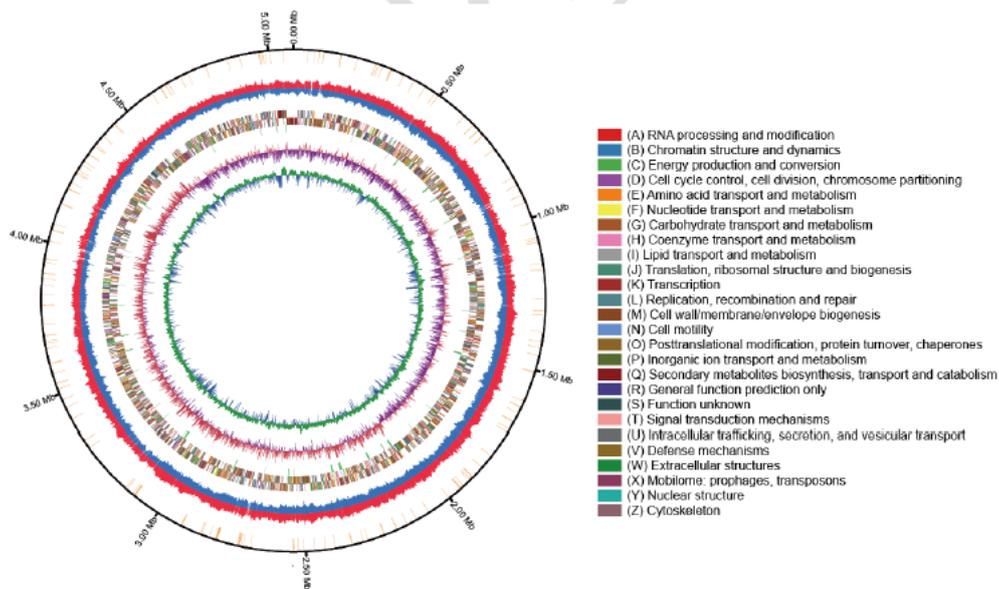

Figure S5. The genome of $1/2\times$ MIC OLA induced *E. coli* ATCC25922 resistant to $8\times$ MIC OLA. The circles from outermost to innermost indicated the scale, GC content (red: $>$ average value, blue: $<$ average value), GC skew (purple: >0 , orange: <0), noncoding RNA (tRNA in black, rRNA in red), minus-stranded CDS maps, plus-stranded CDS maps, minus-stranded base-modified map (full red circle), plus-stranded base-modified map (full blue circle), gene map of the restriction modification system, respectively.

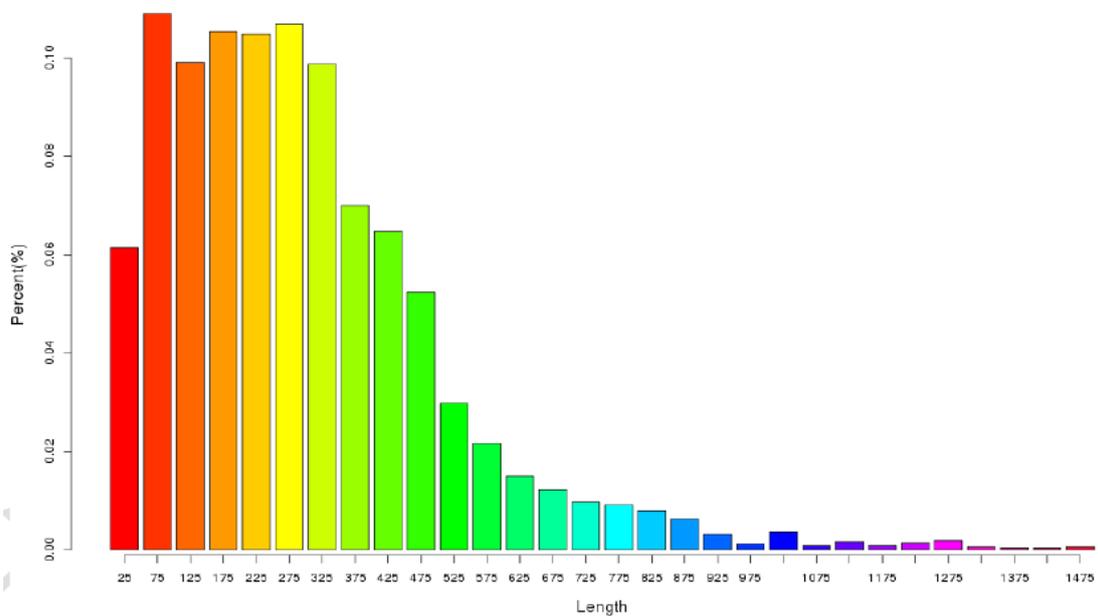

Figure S6. Protein length distribution of the genome of OLA resistant *E. coli* ATCC25922

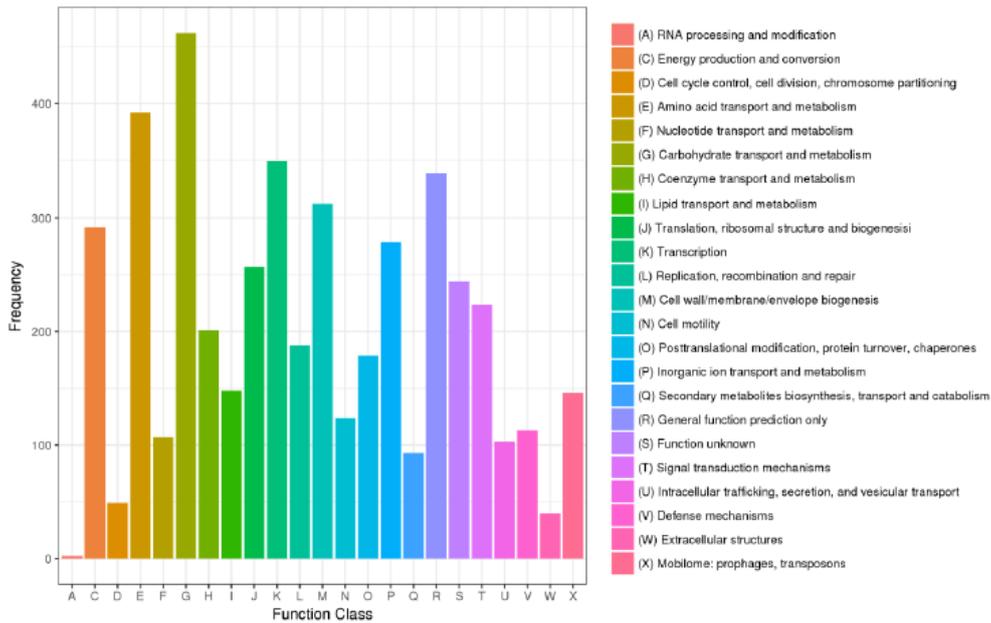

Figure S7. COG function classification of OLA resistant *E. coli* ATCC25922. The abscissa is the group of the COG, and the ordinate is the number of genes annotated to the group.

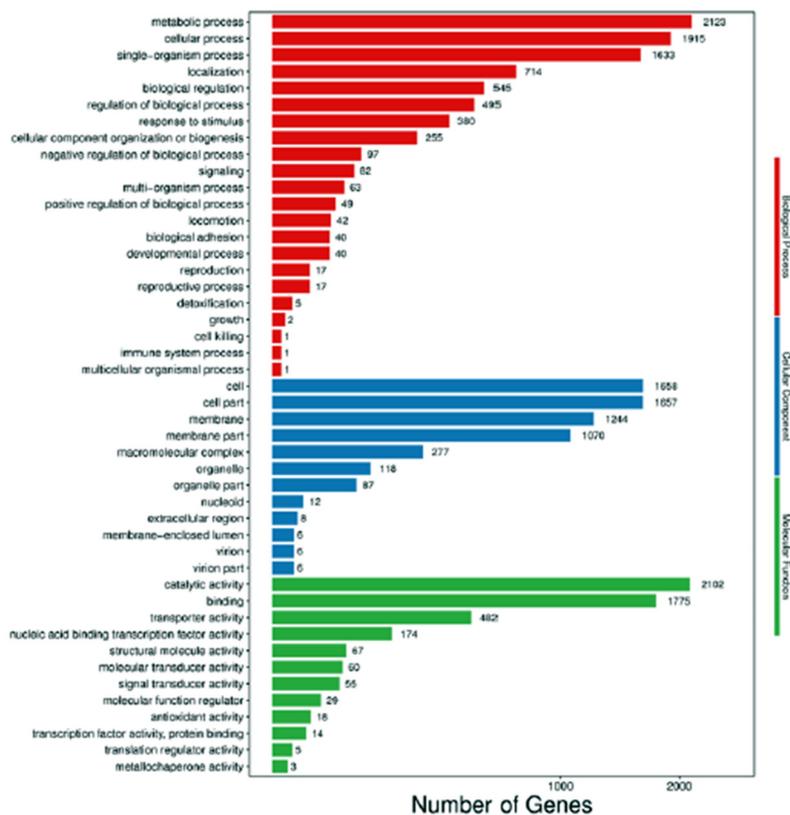

Figure S8. GO function annotation of OLA resistant *E. coli* ATCC25922. The ordinate is the three major classes of the GO term including biological processes, cellular components, and molecular functions, the abscissa is the number of genes annotated to the term (including the term of the term).

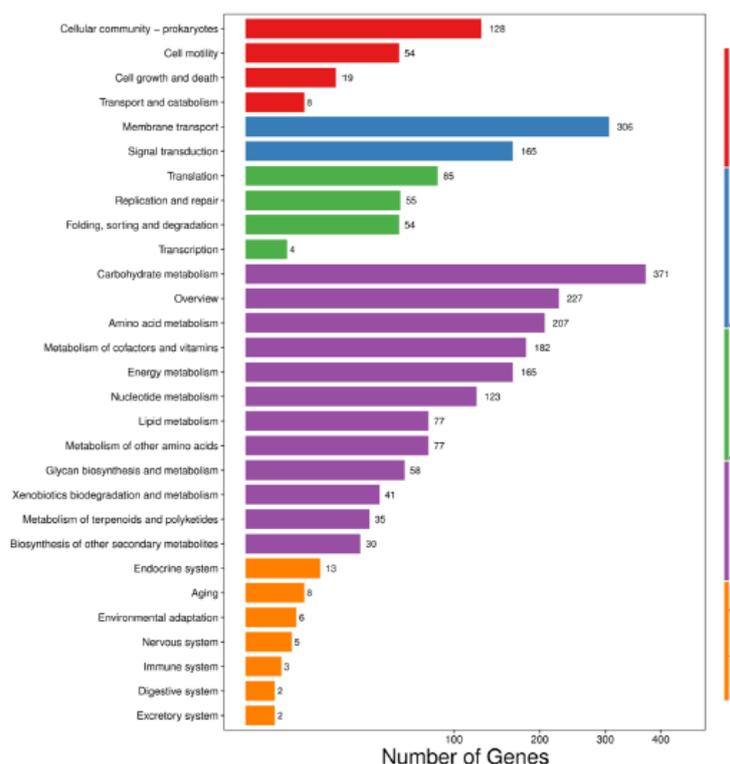

Figure S9. KEGG functions annotation of OLA resistant *E. coli* ATCC25922. The ordinate is the name of the KEGG metabolic pathway, and the abscissa is the number of genes annotated to the pathway. The genes are divided into five branches according to the involved KEGG metabolic pathway including Cellular Processes, Environmental Information Processing, Genetic Information Processing, Metabolism, and Organismal Systems.
