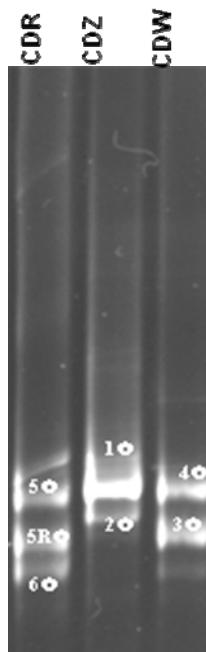

Figure S1. Archaeal DGGE patterns of 16S rDNA gene sequences of the V3 variable regions' (567 bp) obtained from different salt samples. Lane1: CDR; lane2: CDW; lane3: CDZ. Bands marked with a numbered asterisk were excised from gel, re-amplified and sequenced. The gradient of the urea and formamide ranged from 20% to 55%.

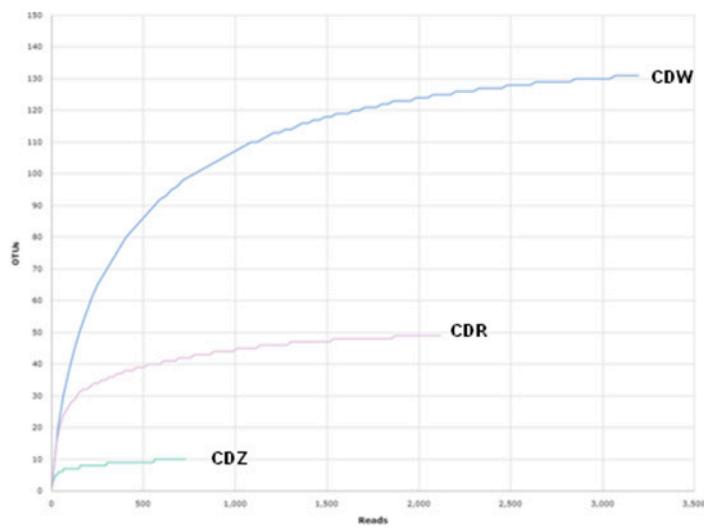

Figure S2: Genus-level rarefaction curves of CDZ, CDR and CDW sample based on the 16S rDNA sequences analyzed.

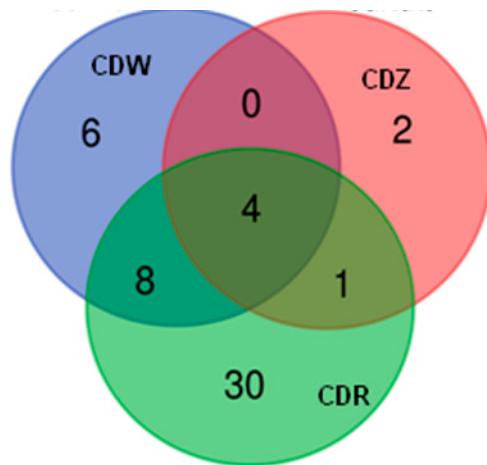

Figure 3. Venn diagrams showing the unique and shared OTUs (3% distance level) identified based on cultured, 16S rRNA libraries, DGGE and metataxonomic approaches, for CDR, CDW and CDZ respectively.
