

Supplementary Figure S1. The floating cells in the supernatant of co-cultured tonsil-derived mesenchymal stem cells (TMSCs) and differentiated HL-60 (dHL-60) cells are mostly dHL-60 cells. Giemsa staining was shown to demonstrate the morphology of the harvested floating cells from the co-culture of TMSCs and dHL-60 cells. Image magnification, 200 \times . Scale bars, 200 μ m.

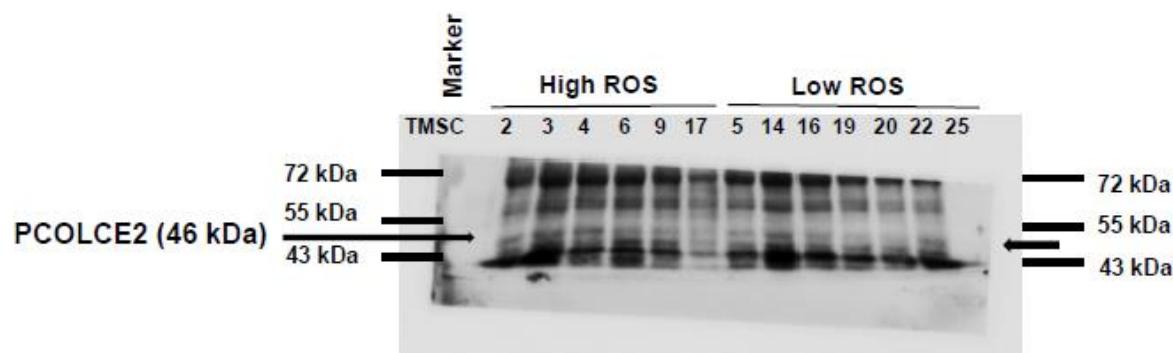

A. PCOLCE2

B. Tubulin

C. PCOLCE2

D. Ponceau

Supplementary Figure S2. Full Western Blot of Figure 3D,E.

Supplementary Table S1. Primers used in real-time PCR.
