

Supplementary materials

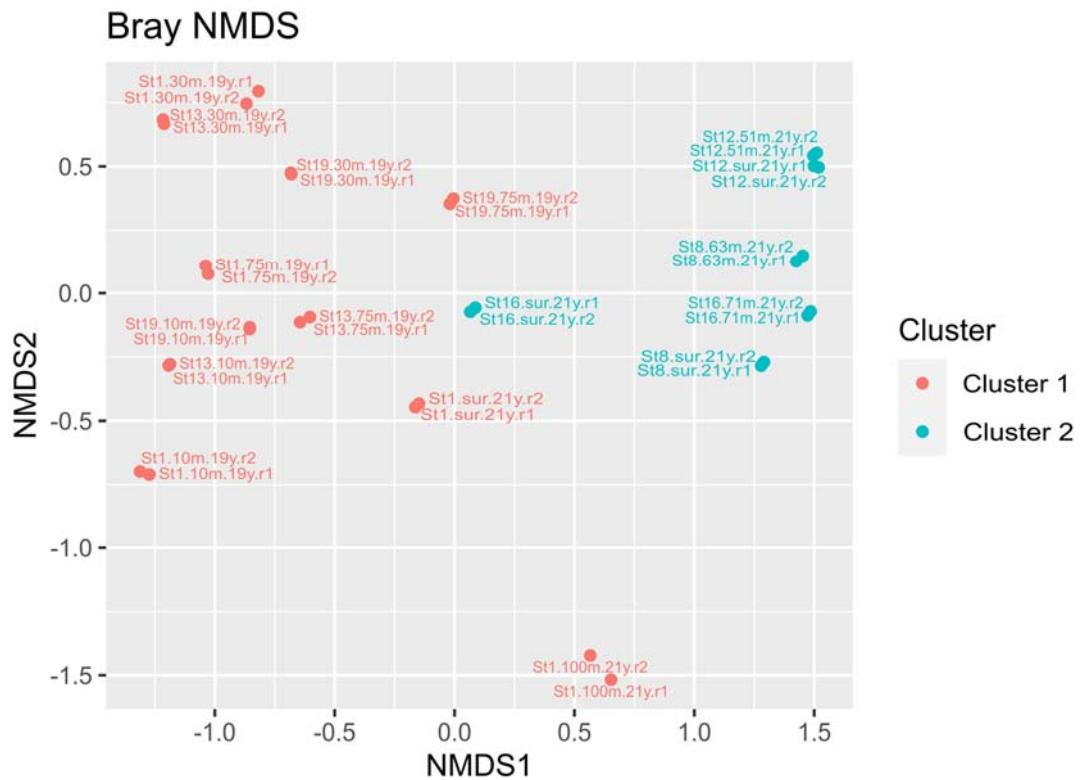

Figure S1. Nonmetric multidimensional scaling (NMDS) ordination of variation based on weighted Bray-Curtis dissimilarity for comparing technical replicates

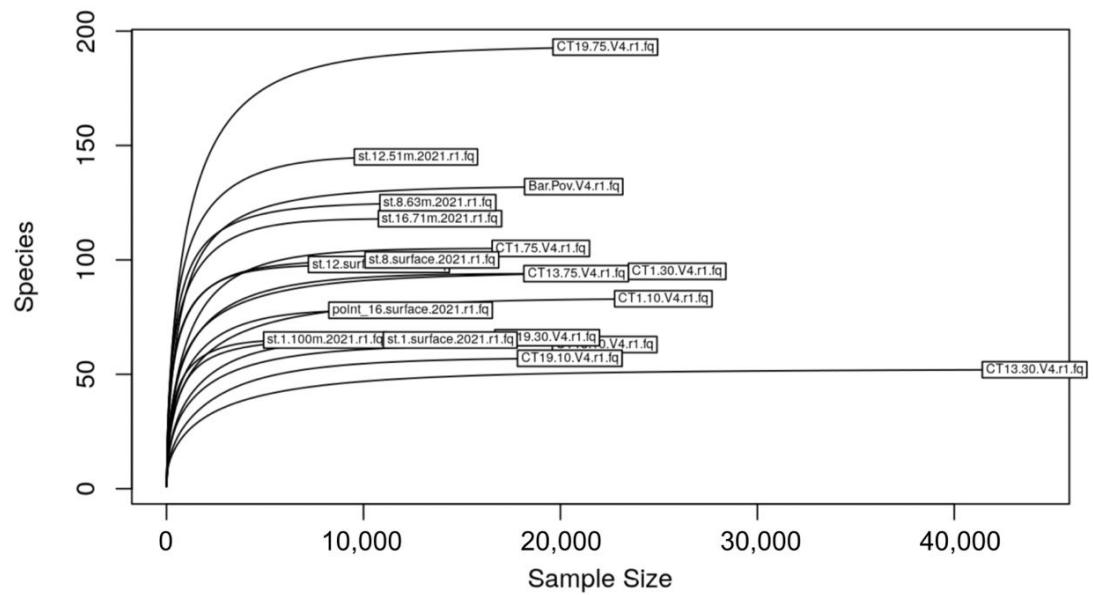

Figure S2. Rarefaction curves of the Barents Sea samples.

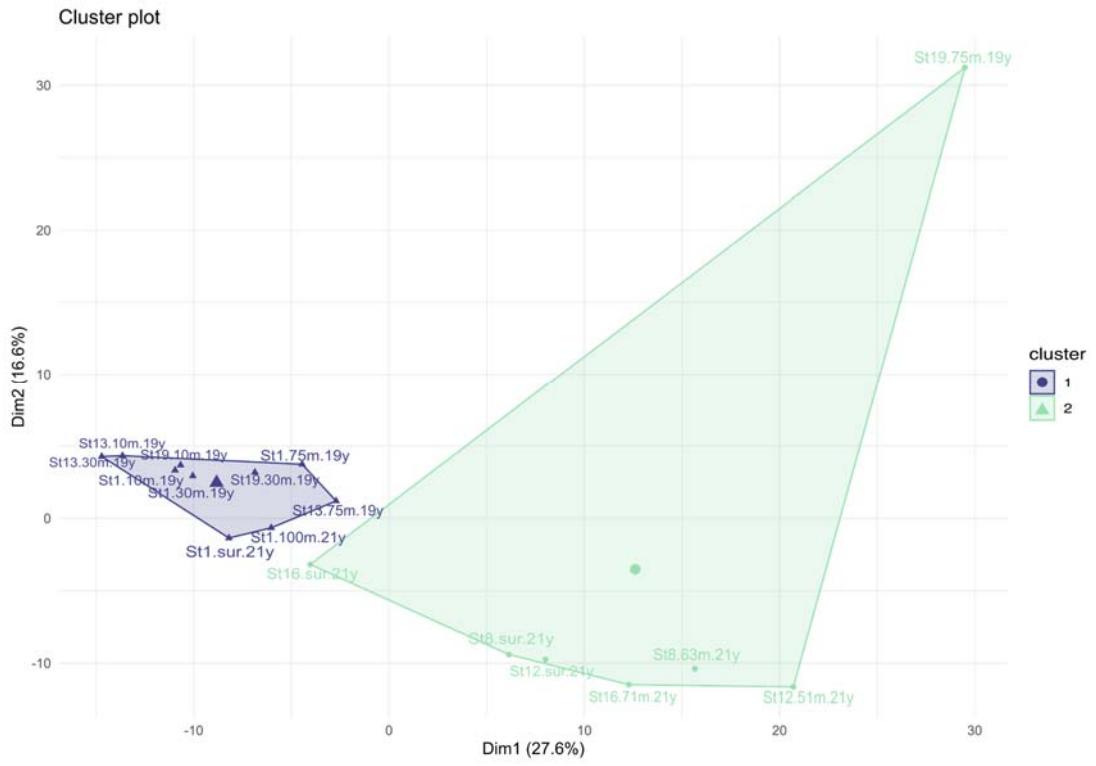

Figure S3. PCA ordination of samples based on the Euclidean distances between data points. Analysis showed that x-axis (Dim1, equals to PC=principal component), accounts for 27.6% of the total variation, while the y-axis (Dim2) accounts for 16.6% of the variation.

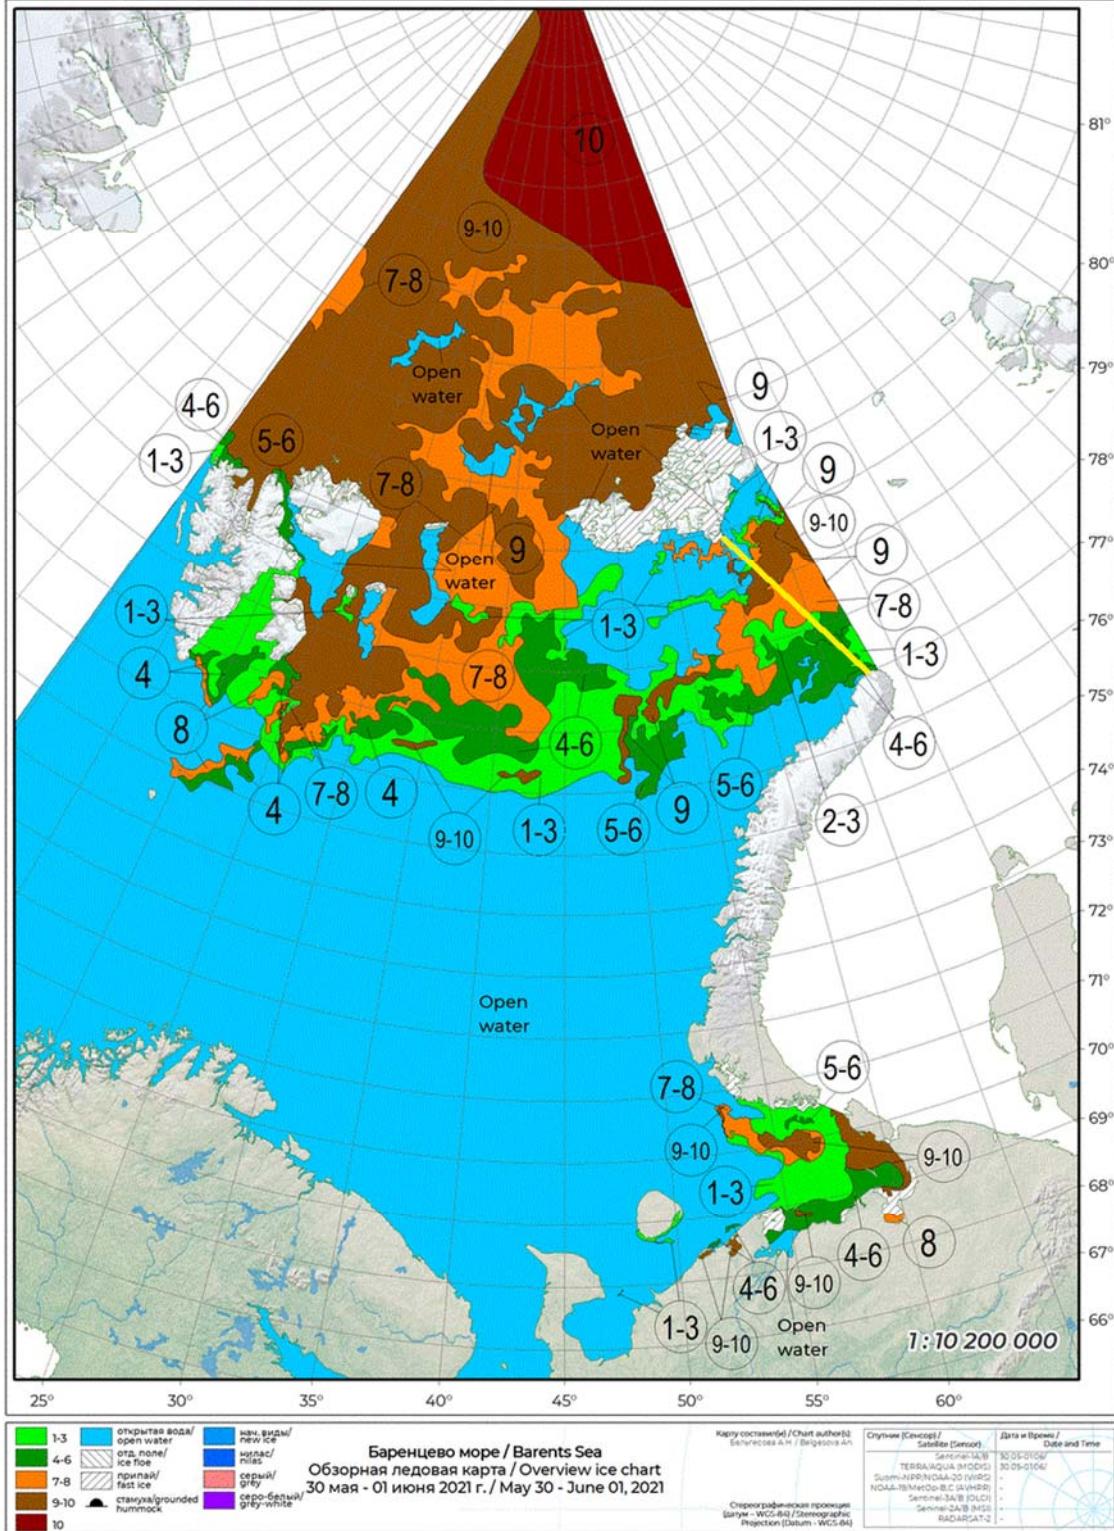

Figure S4. Overview ice chart of the Barents Sea 2 weeks before 2021 sampling. The yellow line shows a section between Novaya Zemlya and Franz Josef Land.

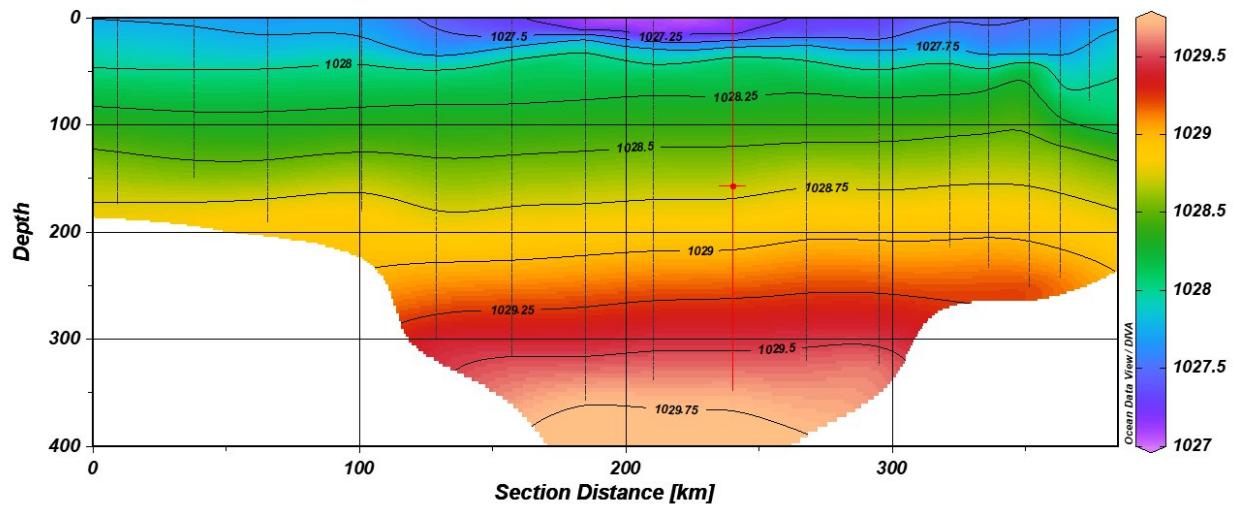

Figure S5.The density profile of the section between Novaya Zemlya and Franz Josef Land.

Table S1. Clusterization of samples

	Shannon	Simpson	InvSimpson	Fisher	PD (Feit)	Flow
St1.10m.19y	1.679	0.562	2.284	10.686	15.229	Cluster 1
St1.30m.19y	2.525	0.845	6.440	12.429	14.875	Cluster 1
