

Supplementary Figure S1. Acylcarnitine trajectory across gestational weeks<sup>a,b</sup>

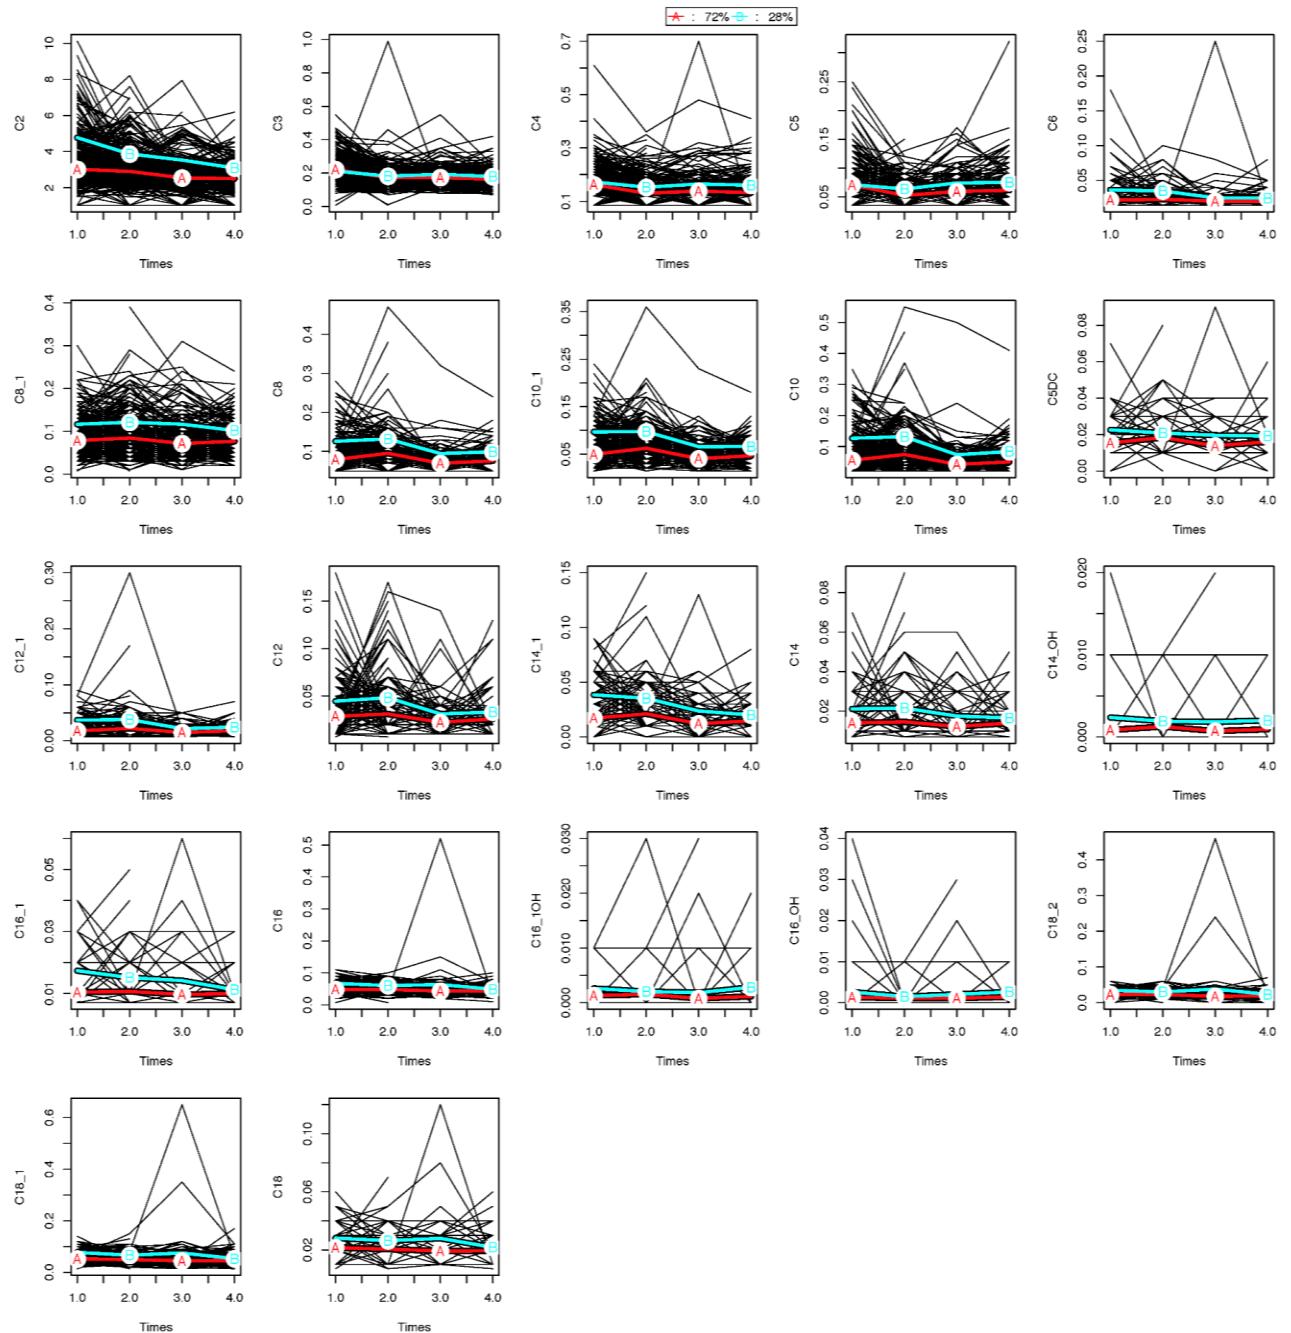

<sup>a</sup> Trajectories were identified based on a weighted latent class model. We compared model fit for each biomarker based on 1–4 trajectory groups and fit linear, quadratic, and cubic models. Final models were selected based on Jeffreys's scale. Final selected models had ≥5% of the data in each identified group; <sup>b</sup> Group 1 shown in orange; Group 2 shown in blue; and Group 3 shown in green. Percentages represent the proportion of the data estimated to make up each group.

Supplementary Figure S2: Joint trajectory of acylcarnitine across gestational week

Supplementary Table S1. Acylcarnitine in association with neonatal birthweight, birthweight z score, length, sum of skinfolds and sum of body circumference <sup>a,b,c</sup>

Maternal biomarker	Neonatal outcome, Adjusted $\beta$ (95% CI)				
	Birthweight, g	Birthweight, z score	Length, cm	Sum of skinfolds, mm	Sum of circumference, cm

<sup>a</sup> Adjusted for maternal age (continuous), race/ethnicity (non-Hispanic white, non-Hispanic black, Hispanic, Asian), education (high school or less, some college/associate degree, 4-year college degree or higher), nulliparity (yes/no), prepregnancy body mass index (continuous), gestational age at blood collection (continuous); <sup>b</sup> The coefficient and 95% CI are standardized estimates, representing outcome change per one standard deviation increase in acylcarnitines

Supplementary Table S2: Joint trajectory of acylcarnitines across gestation and the association with neonatal birthweight, birthweight z score, length, sum of skinfolds, and sum of body circumferences

Maternal biomarker	Neonatal outcome, Adjusted $\beta$ (95% CI)				
	Birthweight, g	Birthweight, z-score	Length, cm	Sum of skinfolds, mm	Sum of circumference, cm
