¹Data represents the mean ± percent standard error (in parentheses) of three experimental replicates.

Tables S2 to S51 list upregulated and/or downregulated *P. vulgaris* genes in leaves of a CBB-resistant RIL and/or a CBB-susceptible RIL following inoculation with *Xanthomonas axonopodis* (*Xap*). Significant DEGs had a q value ≤ 0.05 ; this statistical information is provided in Excel S1 and Excel S2 spreadsheets of the Supplementary Information. In Tables S2 to S51, the significant upregulated DEGs (as statistically determined in Excel S1 & S2) are shaded dark grey for the *Xap* treatment relative to the light grey mock treatment at the specified PI sampling time; the significant downregulated DEGs (as statistically determined in Excel S1 & S2) are shaded dark grey for the mock treatment relative to light grey for the *Xap* treatment at the specified PI period. Non-shaded data are not significantly different at the specified PI sampling period.

Table S2. Transcript abundance for genes upregulated in the CBB-resistant RIL at 0 h post-inoculation (PI) with *Xanthomonas axonopodis* (*Xap*). Transcript levels for individual genes corresponding to each RIL/ inoculation treatment/ sampling time PI are represented as FPKM \pm SE of three experimental replicates.

Table S5. Transcript abundance for genes upregulated in the CBB-resistant RIL at 48 h post-inoculation (PI) with *Xanthomonas axonopodis* (*Xap*). Transcript levels for individual genes corresponding to each RIL/ inoculation treatment/ sampling time PI are represented as FPKM ± SE of three experimental replicates.

Table S19. Transcript abundance for genes upregulated in the CBB-resistant RIL and the CBB-susceptible RIL at 0 h post-inoculation (PI) with *Xanthomonas axonopodis* (*Xap*). Transcript levels for individual genes corresponding to each RIL/inoculation treatment/ sampling time PI are represented as FPKM ± SE of three experimental replicates.
