

Highly efficient biotransformation and production of selenium nanoparticles and polysaccharides using potential probiotic *Bacillus subtilis* T5

Supplementary Materials:

Table S1. Color changes of isolates in LA broth containing different concentrations of selenite.

Bacteria	50 mM	100 mM	150 mM	200 mM
<i>Bacillus licheniformis</i> ES-1	+++	++	-	-
<i>Bacillus tequilensis</i> ES-2	++	-	-	-
<i>Lysinibacillus fusiformis</i> XF-1	++++	++++	++	-
<i>Bacillus paralicheniformis</i> XF-4	++++	+++	++	-
<i>Bacillus subtilis</i> T5	++++	++++	+++	+++
<i>Bacillus cereus</i> T4	++++	+++	+	-
<i>Bacillus pumilus</i> H4T-9	+++	++	-	-

- normal; + slightly red; ++ orange; +++ red; ++++ crimson.

Table S2. Biochemical characteristics of strain T5 and *Bacillus subtilis*

Characteristic	Strain T5	<i>Bacillus subtilis</i> [1]
Oxidase	+	V
Voges-Proskauer test	-	-
Indole production	-	-
Gelatin liquefaction	V	+
Carbon sources utilization	-	-
D-xylose	-	-
L-arabinose	-	-
D-mannose	-	-
Sucrose	-	-
α -D-glucose	-	-
Lactose	-	-
Arginine decomposition	-	-
Lysine decomposition	-	-
Ornithine decomposition	-	-

+ Positive; - Negative; V variable.

Figure S1. Images of cultures of strain T5 grown. (a) In the absence; (b) In the presence of 200 mM selenite.
