Table S1 Summary of metabolic pathway analysis with MetaboAnalyst 3.0 based on the identified metabolites

Metabolic pathway	Total	Expected	Hits	Raw p	Impact
Sphingolipid metabolism	21	0.074893	2	0.0020808	0.14286
Glycerophospholipid metabolism	30	0.10699	1	0.10265	0.04444
Steroidhormone biosynthesis	70	0.24964	1	0.22622	0.01699

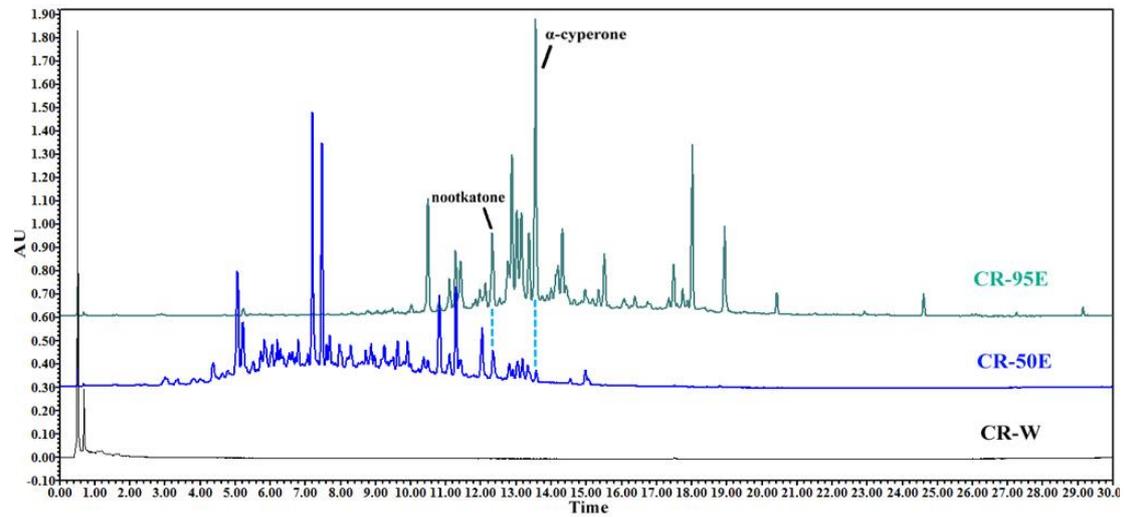

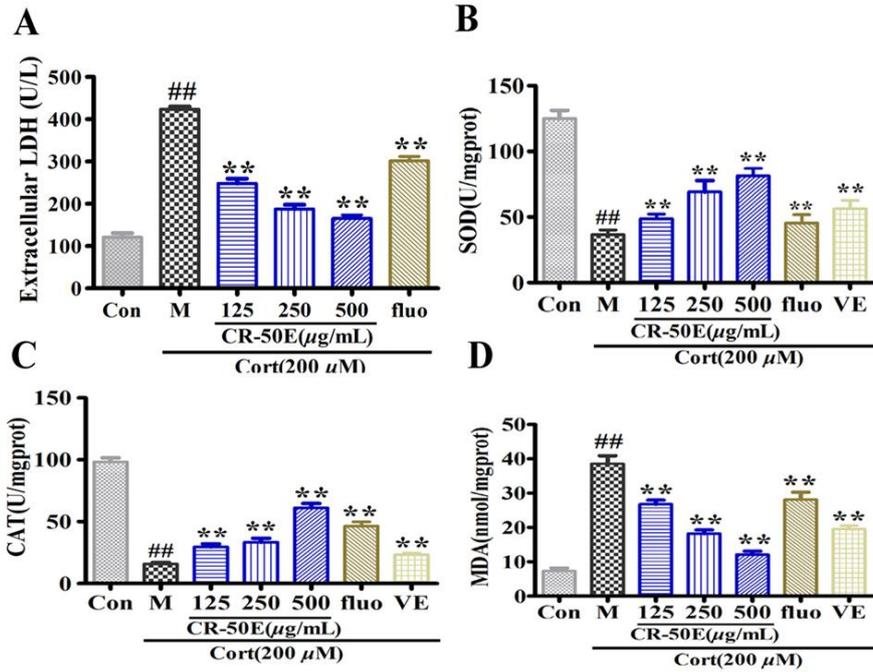

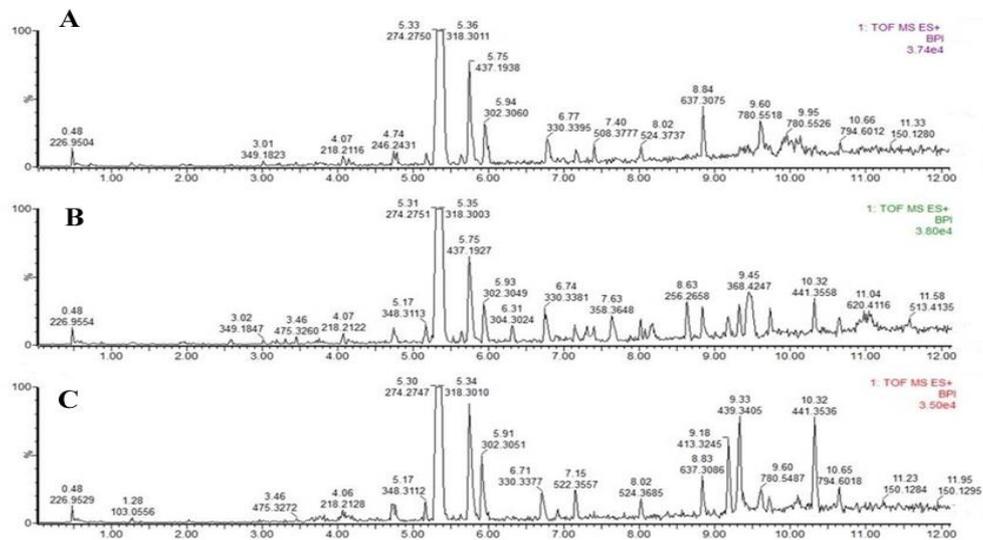

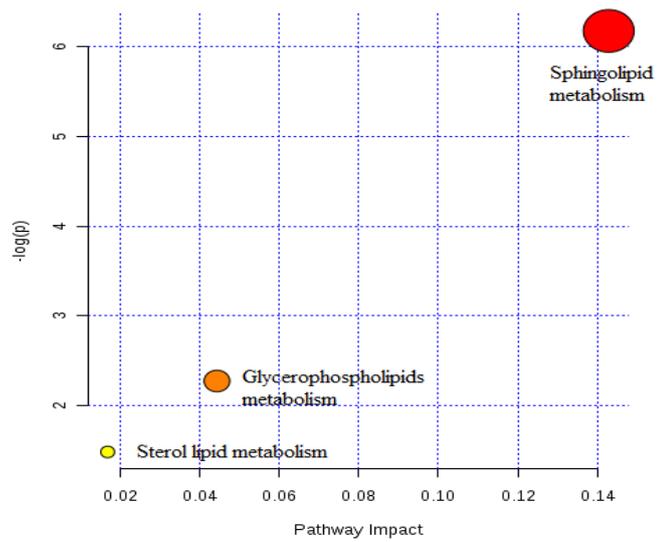

Fig. S1 UPLC chromatograms of the CR-95E, CR-50E and CR-W extracts.

**Fig S2.** Effect of *CR-50E* on corticosterone-induced antioxidants enzymes (SOD, CAT, and MDA) activity; Cells were exposed to 200  $\mu$ M of corticosterone in the absence or presence of *CR-50E* for 24h. Results are presented as means  $\pm$  SD (n=6). \*\* $p$  < 0.01, compared with corticosterone-treated group (Cort), # $p$  < 0.05 or ## $p$  < 0.01, compared with control group.

**Fig. S3** Base peak intensity (BPI) chromatograms of UPLC-Q-TOF/MS in positive ion mode from the PC12 cell samples in each group. A: control group; B: corticosterone-treated group; C: High dose *CR-50E*-treated group.

**Fig. S4** Summary of metabolic pathway analysis with MetaboAnalyst 3.0. Each point represents one metabolic pathway; the size of dot and shades of color is in positive correlation with the impact of the metabolic pathway.
