

Table S1: Serum concentrations (median ng/ml; min-max) of selected ceramides and C16:0-LacCer which significantly differentiated patients with CD from Ctr; with UC from Ctr; and CD from UC. Statistical analysis is described in the “Materials and Method” section.

CD- Crohn’s disease, Ctr – control, UC – ulcerative colitis, NS – not significant

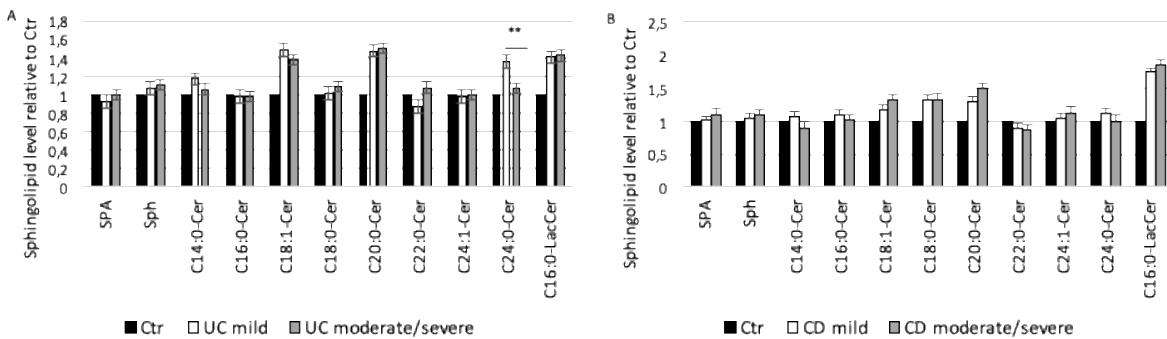

Figure S1. Distribution of sphingolipids for clinical activity in children with ulcerative colitis (UC) (A) and Crohn’s disease (CD) (B). Levels of sphingolipids are presented as a fold change relative to control group (Ctr). The statistical difference was analyzed by Mann-Whitney U test. P values <0.05 were considered significant. ** p < 0.01.

Table S2: Differences in the serum concentration (median ng/ml; min-max) of selected ceramides (C18:1-Cer, C18:0-Cer, C20:0-Cer for CD and C18:1-Cer, C20:0-Cer, C24:0-Cer for UC) and C16:0-LacCer in relation to Paris classification. The Kruskal-Wallis test by ranks was used in statistical analysis.
