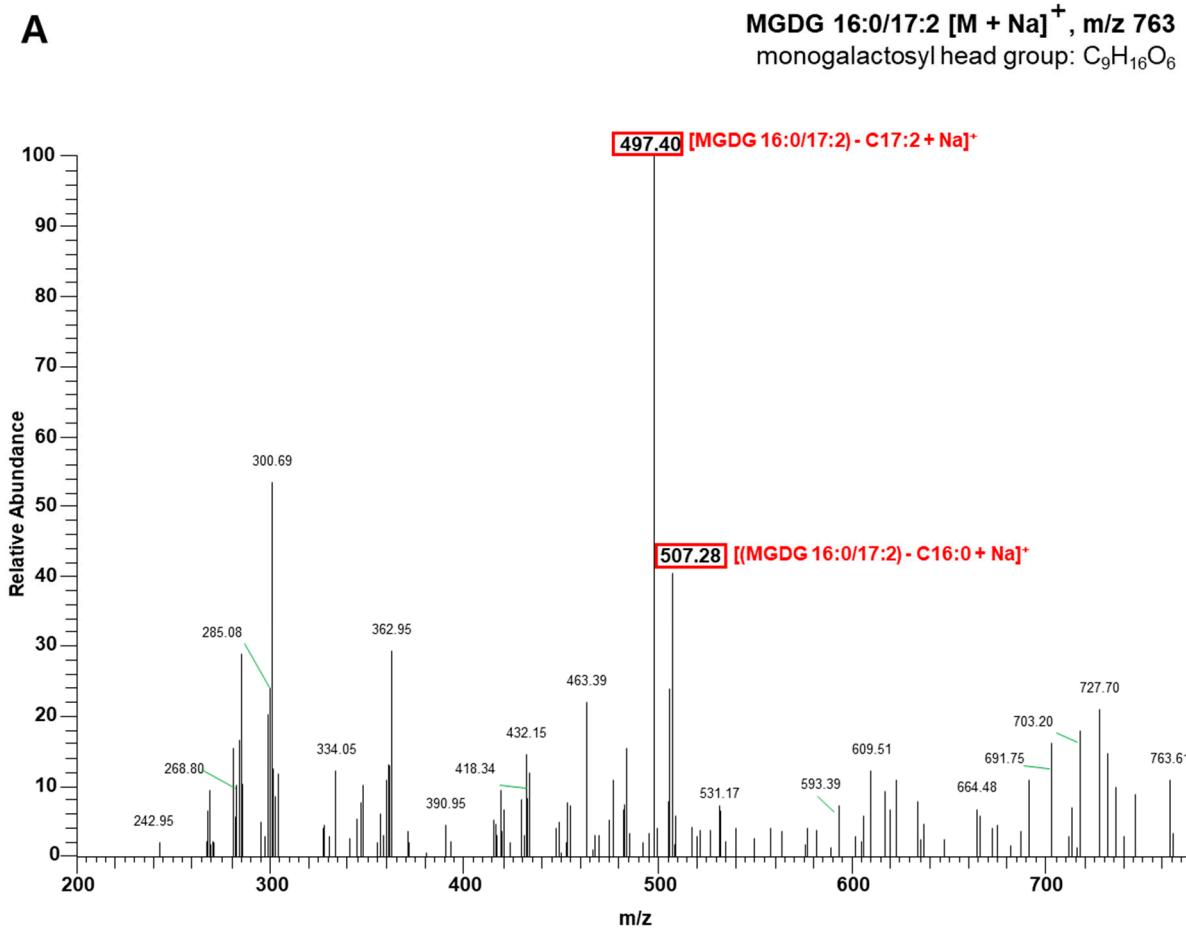

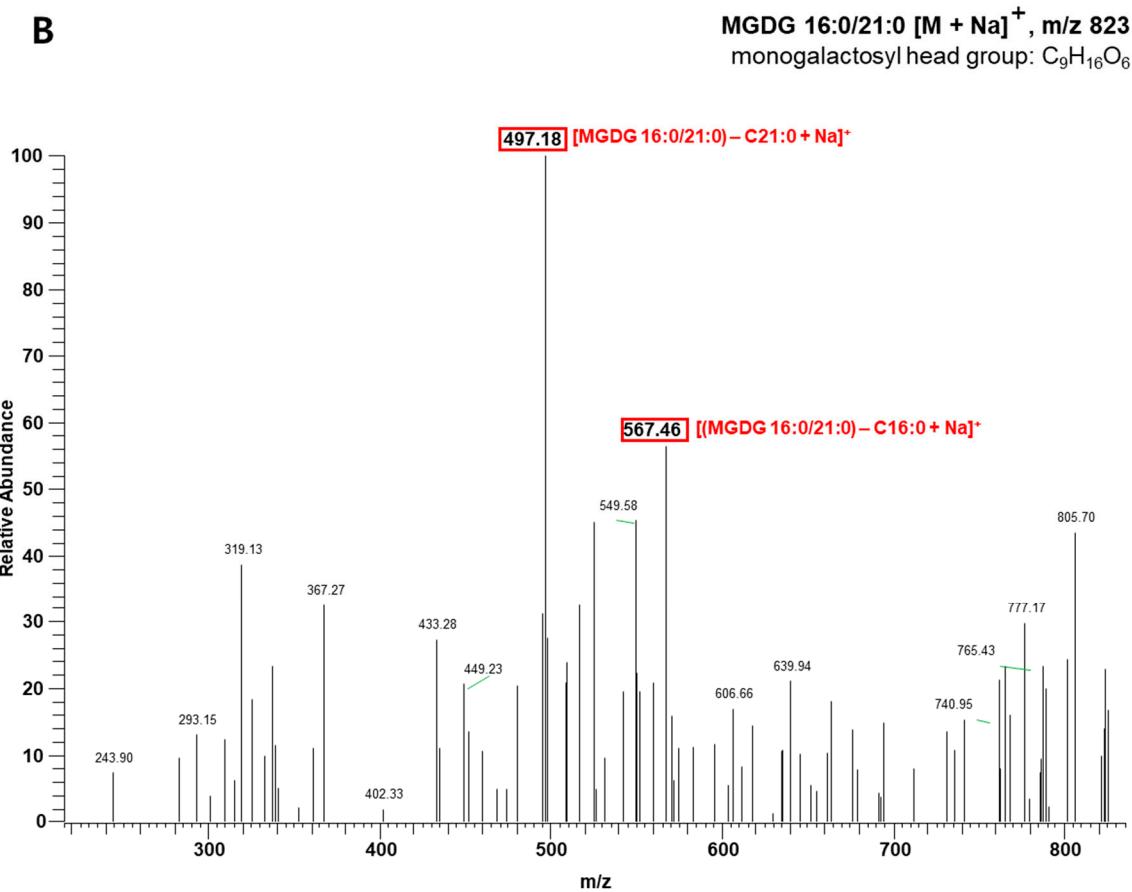

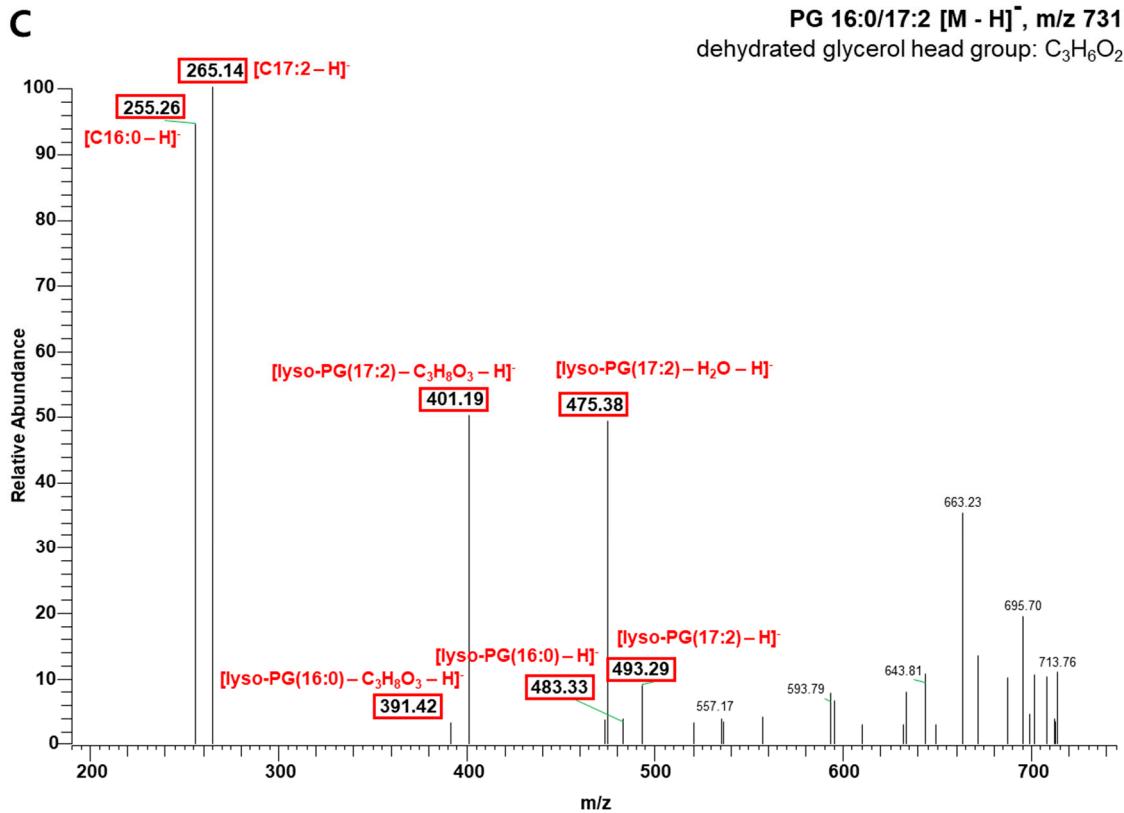

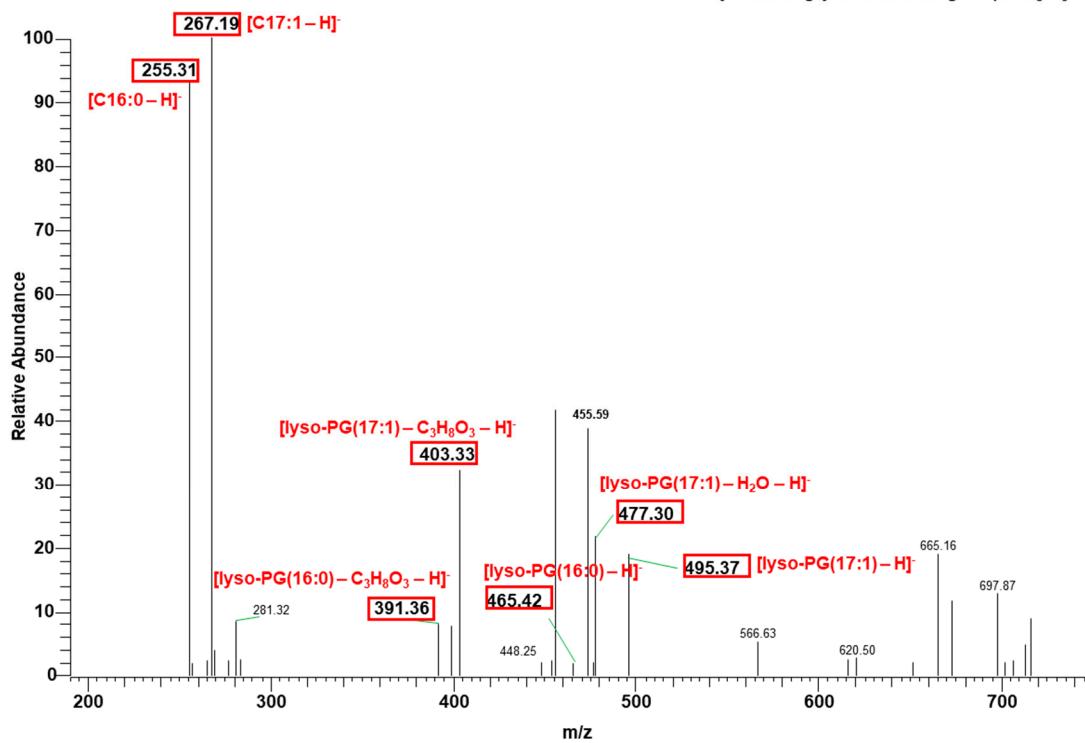

Figure S1. The MS/MS spectra of the identified nine intact lipid species (A-I) in *Synechocystis* sp. PCC 7338 matched to libraries (the authentic references, data base of LIPID MAPS, LipidBlast, and an in-house MS/MS library). The major precursor and fragment ions were indicated red characters. MGDG, monogalactosyldiacylglycerol; DGDG, digalactosyldiacylglycerol; PG, phosphatidylglycerol; SQDG, sulfoquinovosyldiacylglycerol.
