

No.6 plate

Supplemental Figure. S1. Identification of HMG20A as an S100A6-binding protein by Protein Active Array® screening.

The screening result of biotinylated S100A6 binding on the No. 6 array containing 739 duplicate human proteins (01:05,06–32:43,44) with positive signals at 13:7,8 corresponding to HMG20A (high mobility group protein 20A isoform a [*Homo sapiens*], accession number: NP_060670.1).
