

Clotrimazole Fluidizes Phospholipid Membranes and Localizes at the Hydrophobic Part near the Polar Part of the Membrane

Alessio Ausili, Illya Yakymenko, José A. Teruel and Juan C. Gómez-Fernández*

Figure S1. ^1H MAS-NMR spectra of POPC/clotrimazole mixtures. The molar ratio was 5:1 phospholipid/clotrimazole and the temperature was 25 °C. The identification of the resonances was undertaken according to the nomenclature for the different carbons used in Figure 1. Note that the symbols A, B, C, D, E, F and G are used for clotrimazole carbons.
