

Supplementary Figure S1. Microsatellite instability (MSI) analysis of the patient's neoplastic and non-neoplastic cells, both exhibiting PMS2 expression loss. Analysis of 5 MSI markers (BAT25, BAT26, D5S346, D2S123 and D17S250) indicates MSI in three markers (BAT25, BAT26 and D2S123) in both the neoplastic and non-neoplastic cells of the patient's tumor. Additional alleles are highlighted by black arrows.
