

**Figure S2** Quantity and located replicons of differentially expressed genes (DEGs) in different comparisons. (A) Venn diagrams of *Agrobacterium* DEGs in *Agrobacterium*-tea groups compared to *Agrobacterium*-tobacco groups at different time points. (B) The located replicons of *Agrobacterium*-tea groups compared to *Agrobacterium*-tobacco groups at different time points. There are 5 replicons in *Agrobacterium* in this study: pMKV060: pMKV060 plasmid; Ti: tumor-inducing plasmid; At: At plasmid; lc: linear chromosome; cc: circular chromosome..
