

## 1 Supplementary Figures

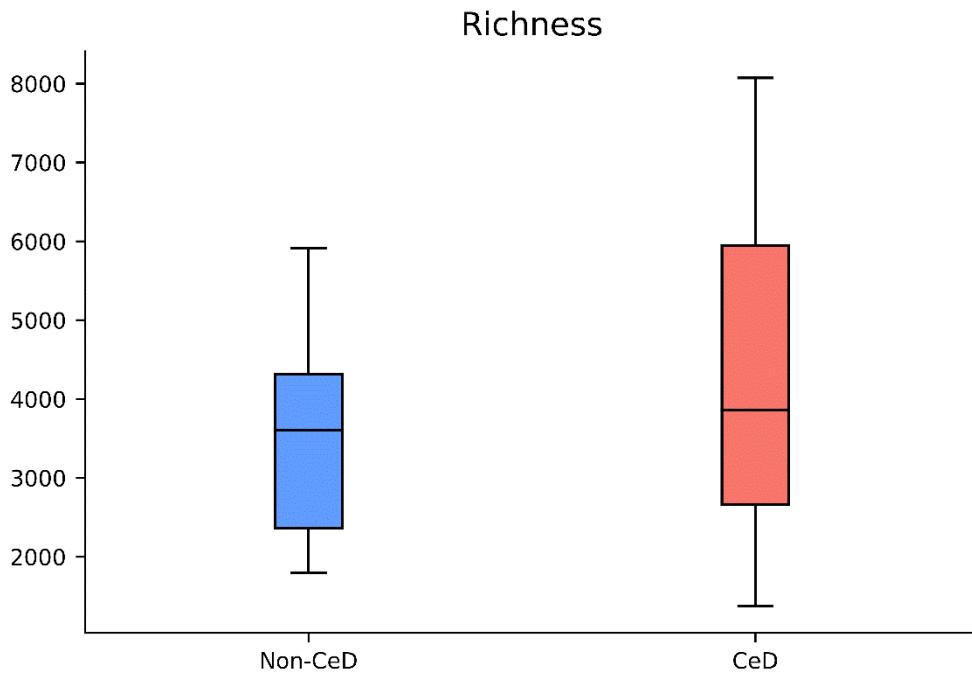

- 1.1 **Supplementary Figure S1:** T cell receptors have 2 chains, according to which T cells can be categorized. Each TCR chain has a constant region and a variable region made up of V (D) and J segments

During T cell maturation/selection, T cells undergo somatic recombination, where the TCR gene segments are rearranged, leaving a few select gene segments, while the rest are deleted. During gene rearrangement the V-J segments are joined in TRA genes. In TRB genes, the D-J segments are joined first, followed by the joining of the selected V gene to the rearranged DJ segments. In the case of TRA and TRB genes, additional junctional diversity is generated at each joining step through the addition of random, non-templated nucleotides.

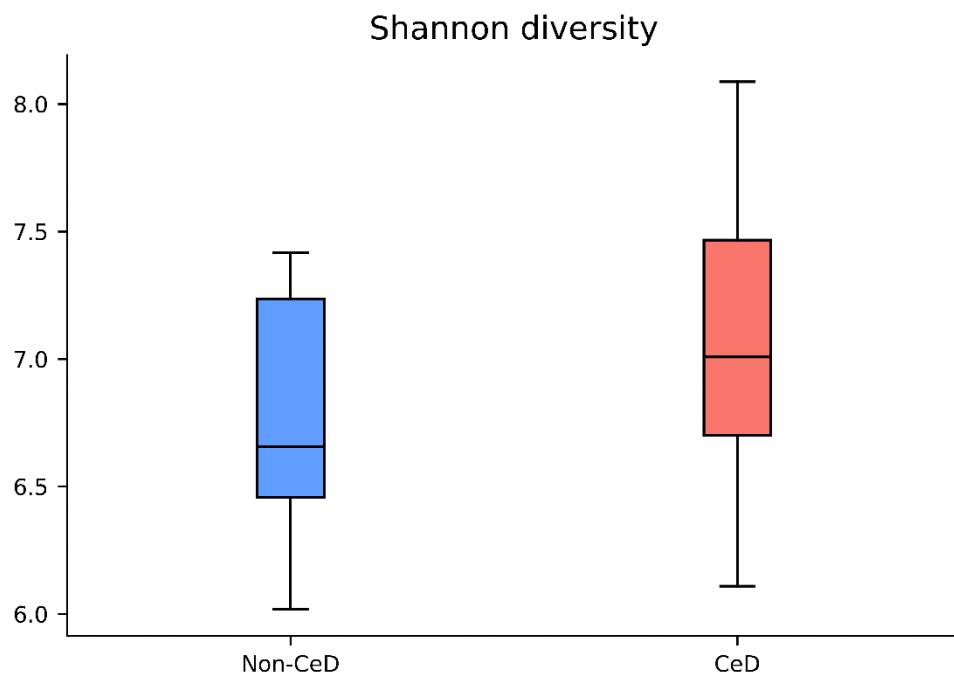

The complementarity-determining region 3 (CDR3) is crucial in antigen recognition. CDR3 of T cells is highly variable, and is located at the V(D)J junction for each TCR chain.

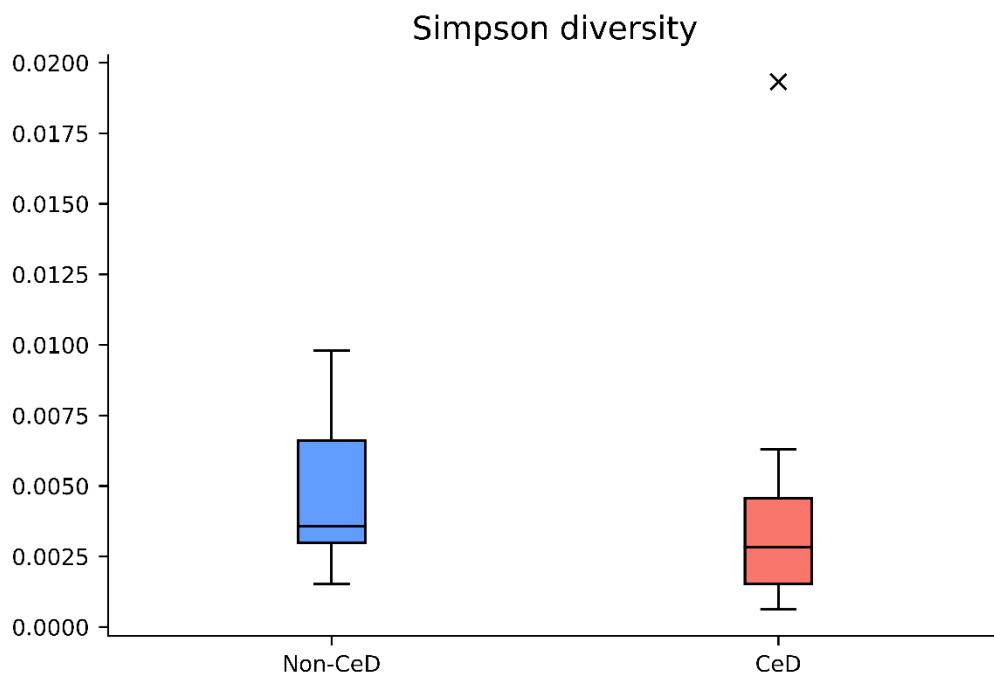

## 1.2 Supplementary Figure S2: Training TCR- $\alpha$ dataset summary

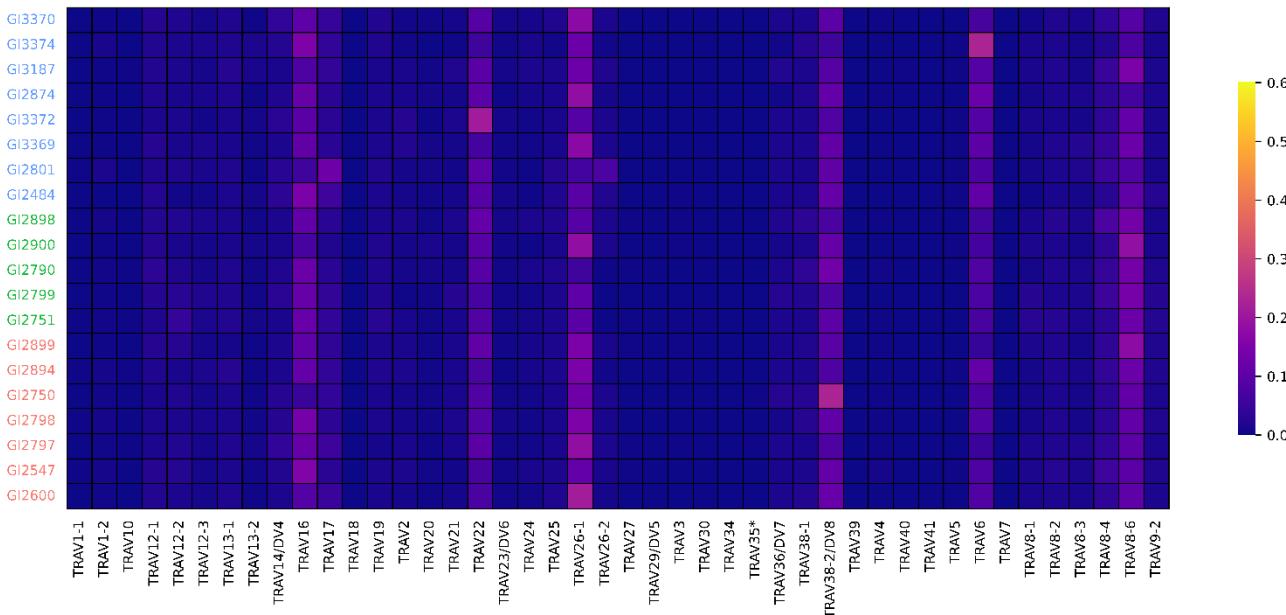

- a. Boxplot indicating richness (number of unique sequences) in TCR- $\alpha$  repertoire samples from CeD patients and non-CeD individuals. No significant difference in mean between the two groups was found (adjusted  $p = 1.00$ , unadjusted  $p = 0.402$ ).

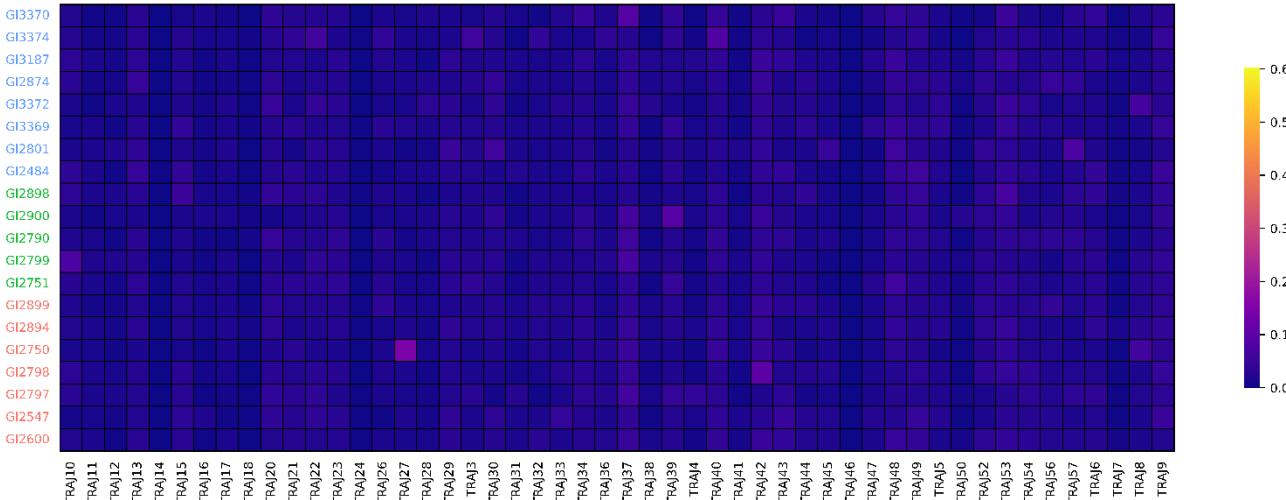

- b. Boxplot indicating Shannon diversity in TCR- $\alpha$  repertoire samples from CeD patients and non-CeD individuals. No significant difference in mean between the two groups was found (adjusted  $p = 0.663$ , unadjusted  $p = 0.221$ ).

- c. Boxplot indicating Simpson diversity in TCR- $\alpha$  repertoire samples from CeD patients and non-CeD individuals. No significant difference in mean between the two groups was found (adjusted  $p = 1.00$ , unadjusted  $p = 0.776$ ).

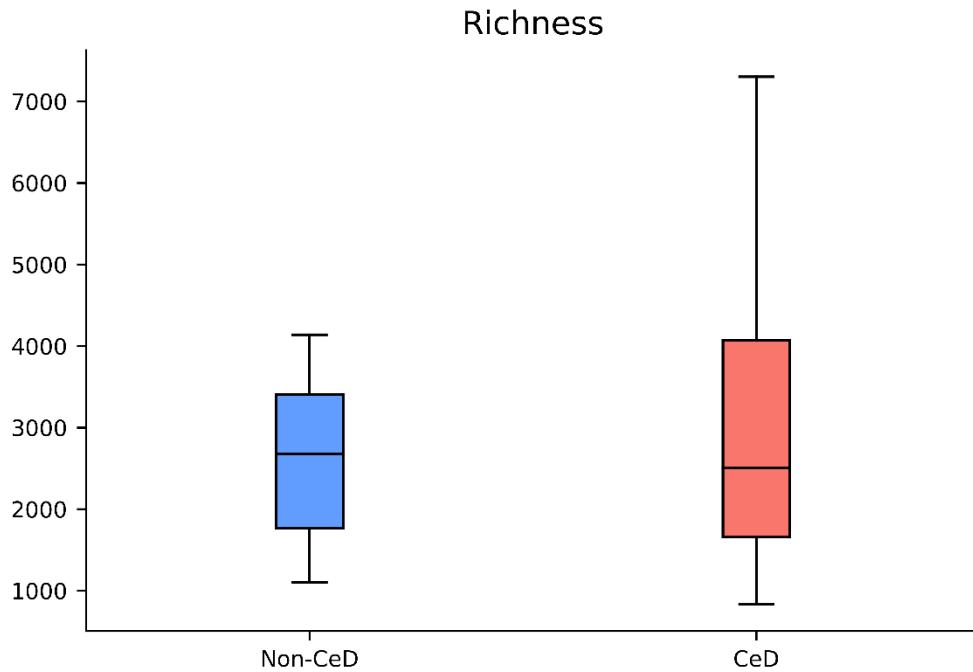

- d. Heatmap showing proportions of TCR- $\alpha$  repertoire samples that use each V segment. TRAV35 shows significantly different mean usage between repertoire samples from CeD patients and non-CeD individuals, indicated by \* (adjusted  $p = 0.0149$ , unadjusted  $p = 0.000338$ ).

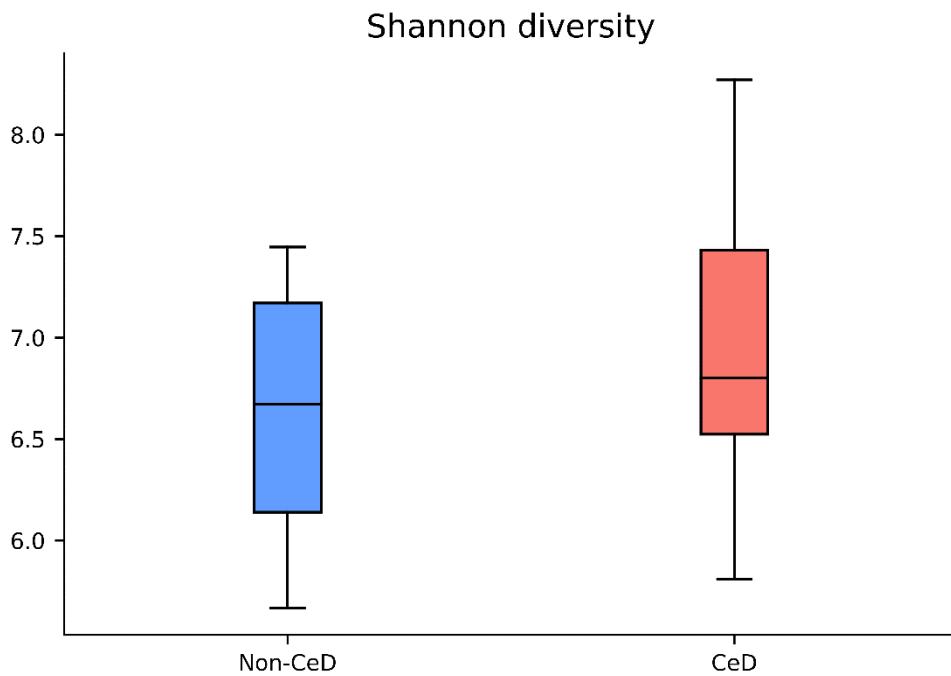

- e. Heatmap showing proportions of TCR- $\alpha$  repertoire samples that use each J segment. No J segment shows significantly different mean usage between repertoire samples from CeD patients and non-CeD individuals.

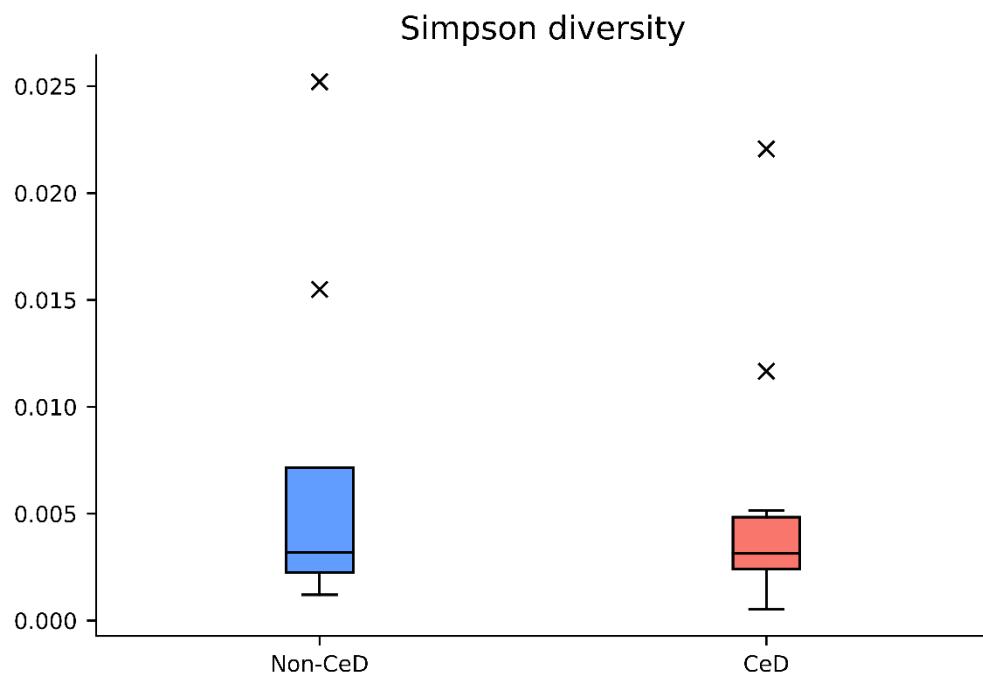

### 1.3 Supplementary Figure S3: Training TCR- $\beta$ dataset summary.

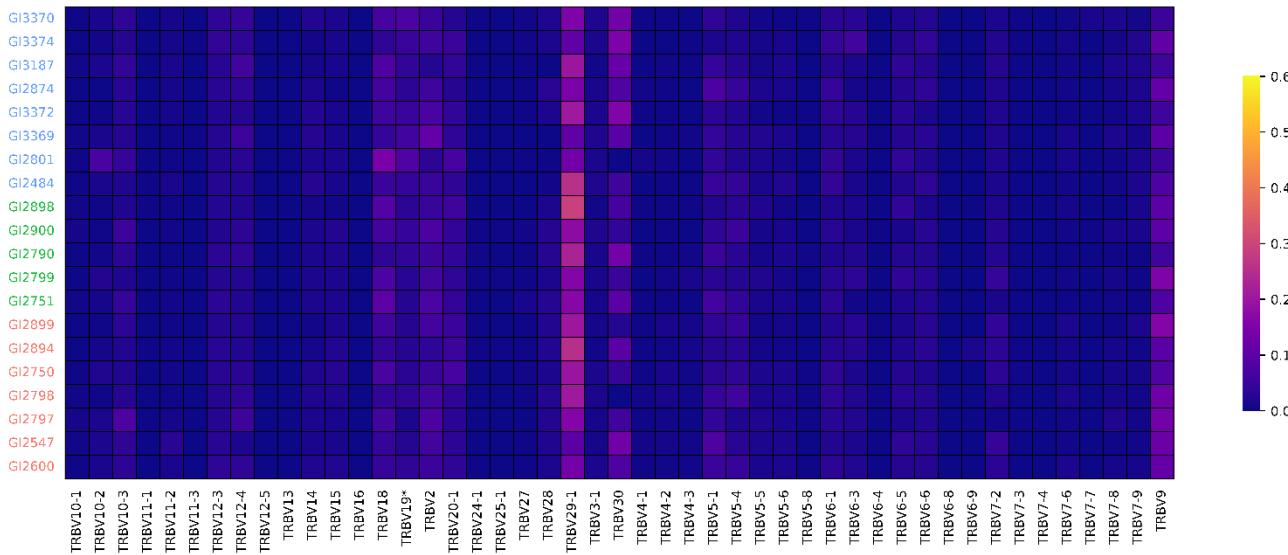

- a. Boxplot indicating richness (number of unique sequences) in TCR- $\beta$  repertoire samples from CeD patients and non-CeD individuals. No significant difference in mean between the two groups was found (adjusted  $p = 1.00$ , unadjusted  $p = 0.483$ ).

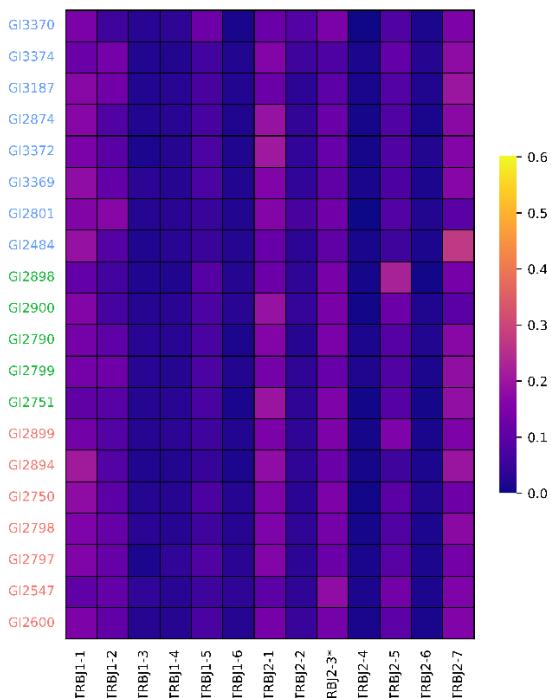

- b. Boxplot indicating Shannon diversity in TCR- $\beta$  repertoire samples from CeD patients and non-CeD individuals. No significant difference in mean between the two groups was found (adjusted  $p = 1.00$ , unadjusted  $p = 0.382$ ).

- c. Boxplot indicating Simpson diversity in TCR- $\beta$  repertoire samples from CeD patients and non-CeD individuals. No significant difference in mean between the two groups was found (adjusted  $p = 1.00$ , unadjusted  $p = 0.568$ ).

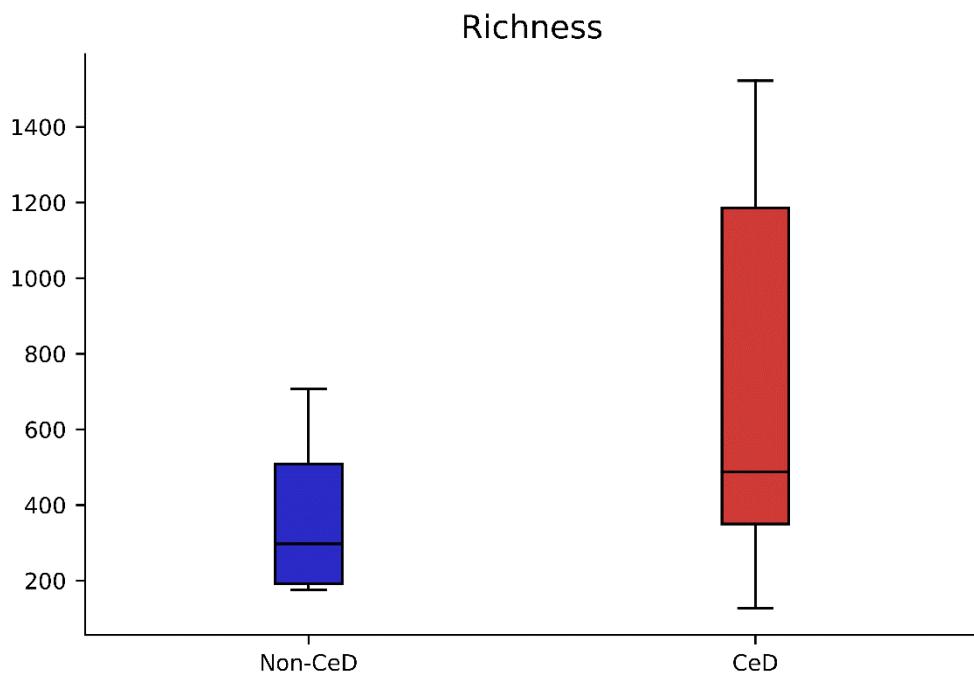

- d. Heatmap showing proportions of TCR- $\beta$  repertoire samples that use each V segment. We observed significantly lower usage of segment TRBV19 (adjusted  $p = 0.0340$ , unadjusted  $p = 0.000724$ ), indicated by \*, in CeD patient samples compared to non-CeD samples.

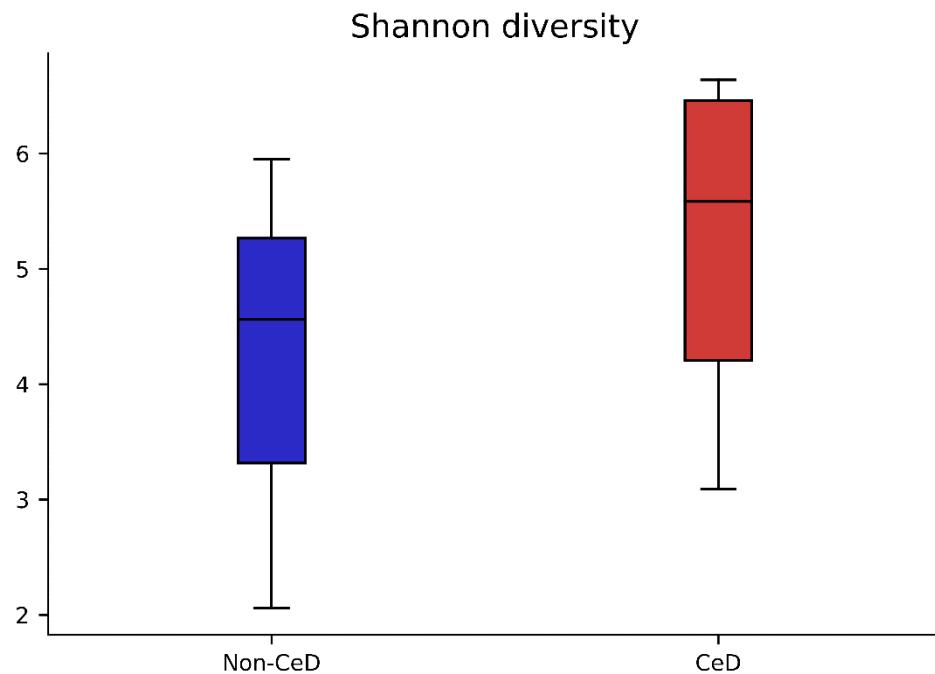

- e. Heatmap showing proportions of TCR- $\beta$  repertoire samples that use each J segment. We observed significantly higher usage of segment TRBJ2-3 (adjusted  $p = 0.0422$ , unadjusted  $p = 0.00325$ ), indicated by \*, in CeD patient samples compared to non-CeD samples, see S2h.

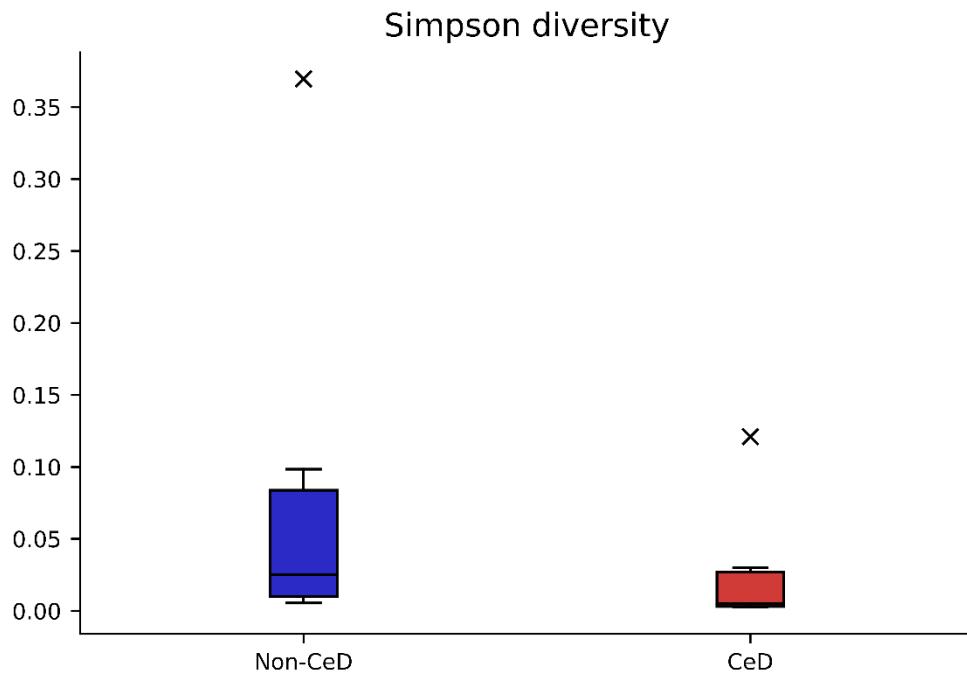

#### 1.4 Supplementary Figure S4: Testing TCR- $\alpha$ dataset summary.

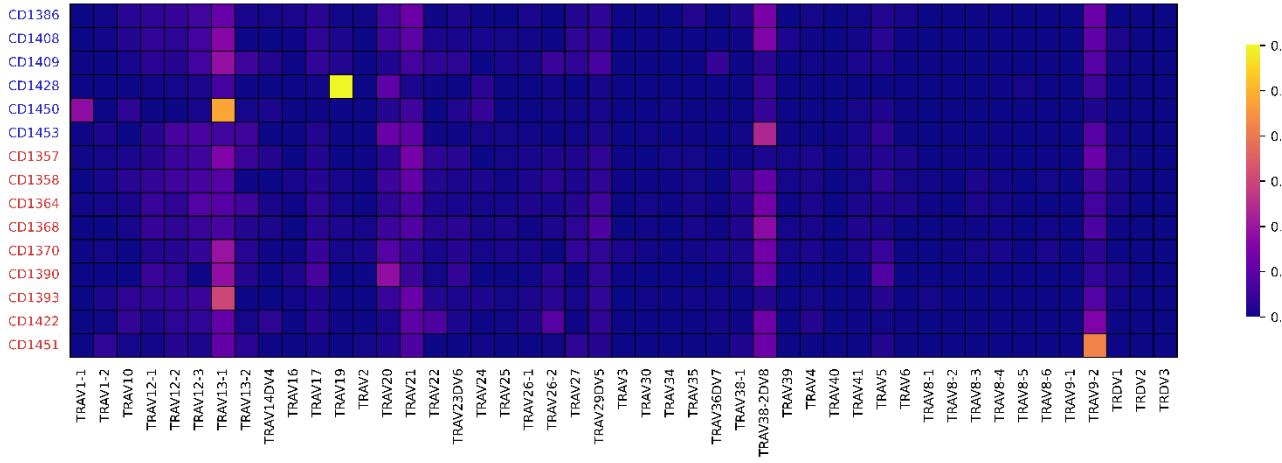

- a. Boxplot indicating richness (number of unique sequences) in TCR- $\alpha$  repertoire samples from CeD patients and non-CeD individuals. No significant difference in mean between the two groups was found (adjusted  $p = 0.464$ , unadjusted  $p = 0.155$ ).

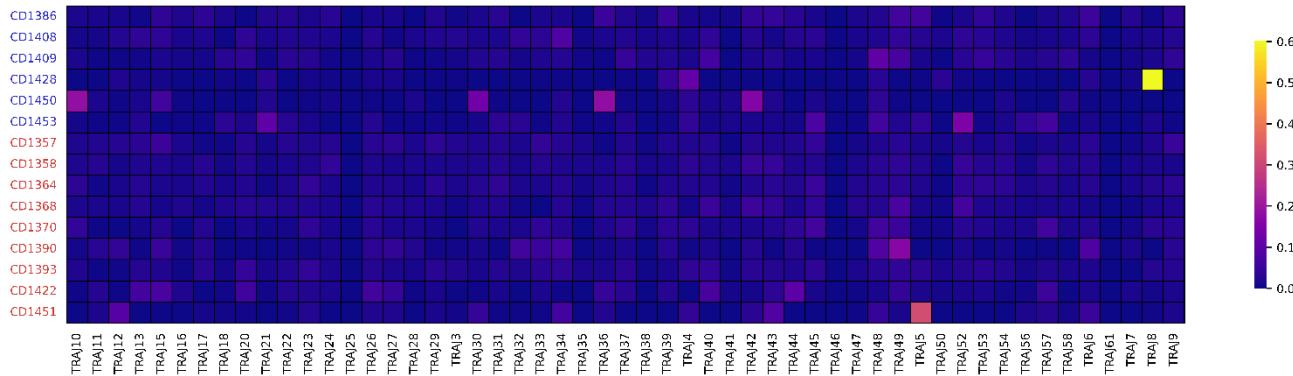

- b. Boxplot indicating Shannon diversity in TCR- $\alpha$  repertoire samples from CeD patients and non-CeD individuals. No significant difference in mean between the two groups was found (adjusted  $p = 0.475$ , unadjusted  $p = 0.158$ ).

- c. Boxplot indicating Simpson diversity in TCR- $\alpha$  repertoire samples from CeD patients and non-CeD individuals. No significant difference in mean between the two groups was found (adjusted  $p = 0.598$ , unadjusted  $p = 0.199$ ).

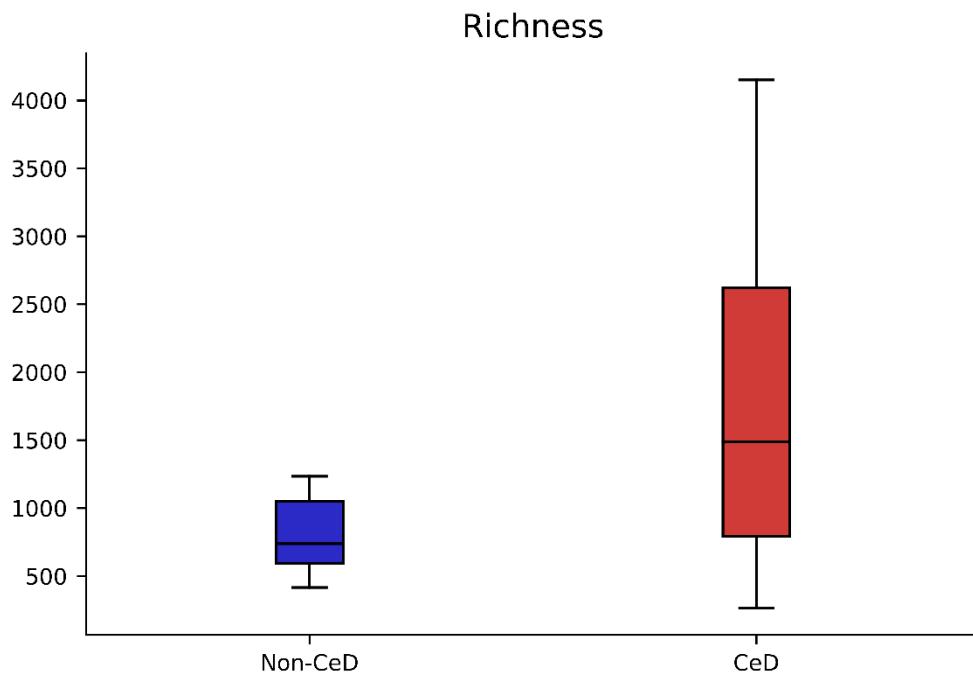

- d. Heatmap showing proportions of TCR- $\alpha$  repertoire samples that use each V segment. No V segment shows significantly different mean usage between repertoire samples from CeD patients and non-CeD individuals.

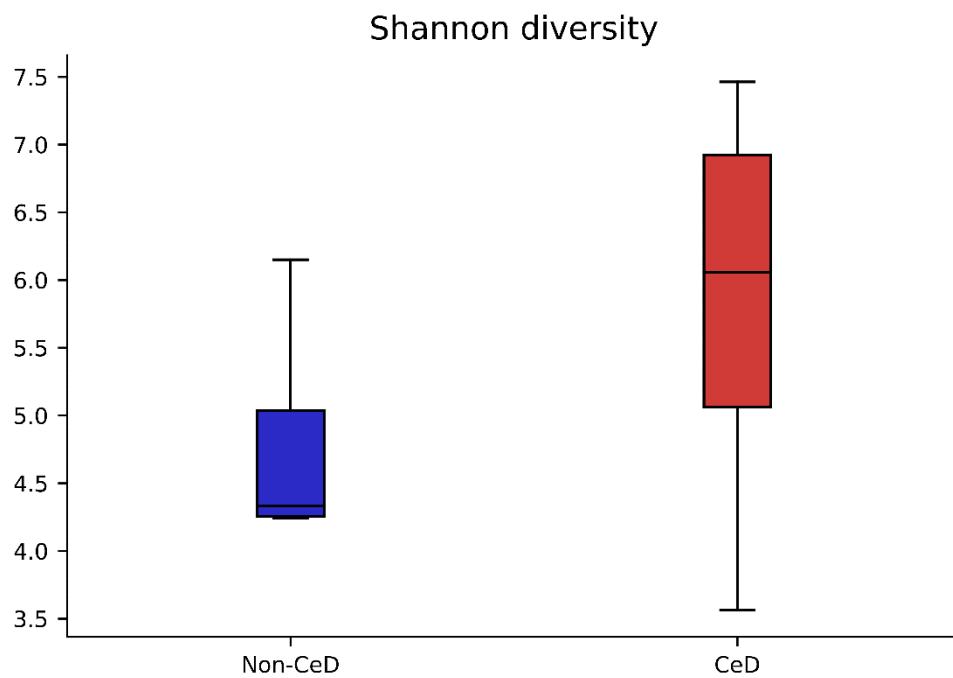

- e. Heatmap showing proportions of TCR- $\alpha$  repertoire samples that use each J segment. No V segment shows significantly different mean usage between repertoire samples from CeD patients and non-CeD individuals.

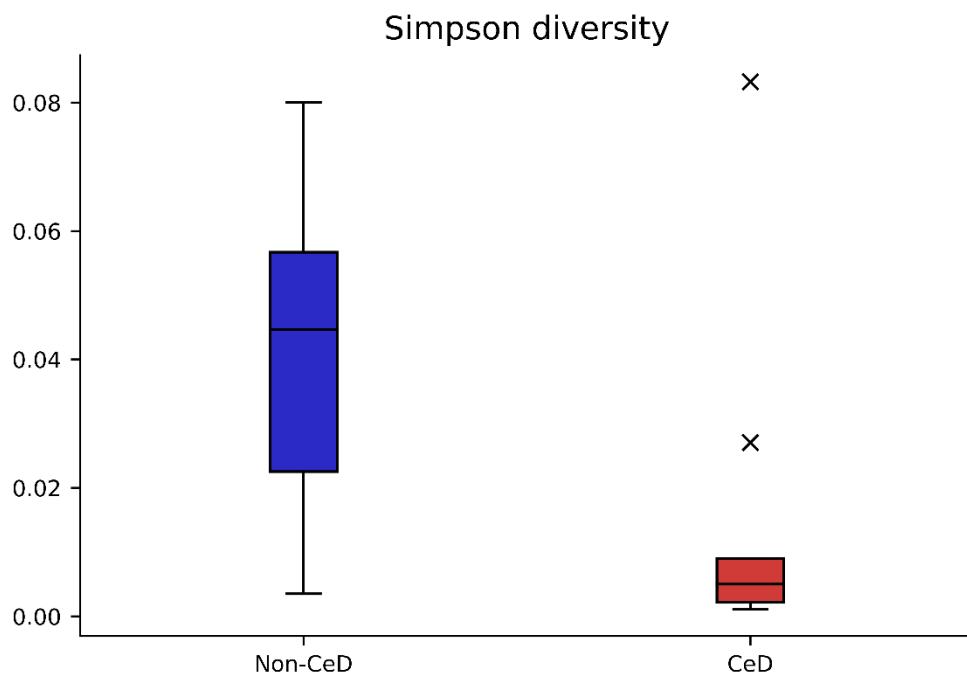

### 1.5 Supplementary Figure S5: Testing TCR- $\beta$ dataset summary.

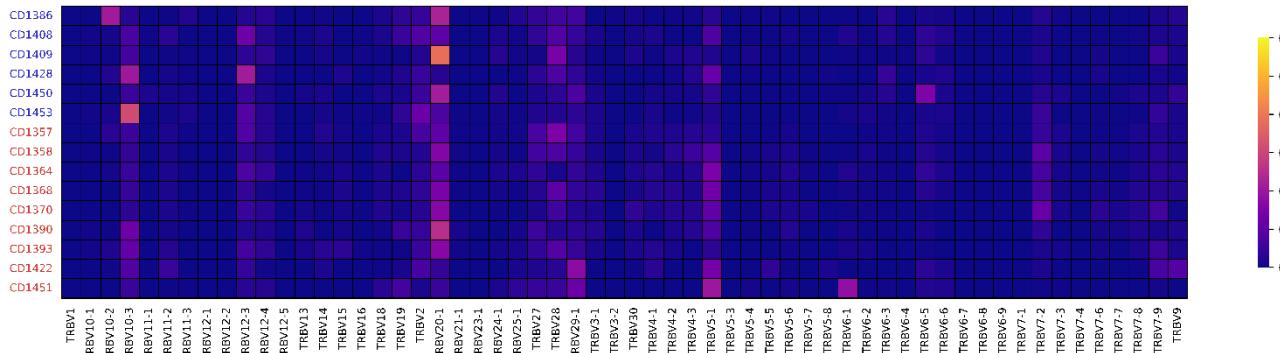

- a. Boxplot indicating richness (number of unique sequences) in TCR- $\beta$  repertoire samples from CeD patients and non-CeD individuals. No significant difference in mean between the two groups was found (adjusted  $p = 0.313$ , unadjusted  $p = 0.104$ ).

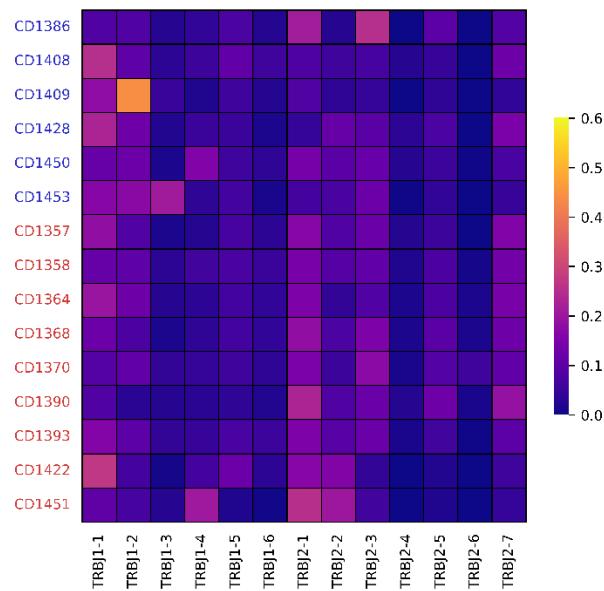

- b. Boxplot indicating Shannon diversity in TCR- $\beta$  repertoire samples from repertoire samples from CeD patients and non-CeD individuals. No significant difference in mean between the two groups was found (adjusted  $p = 0.294$ , unadjusted  $p = 0.0981$ )

- c. Boxplot indicating Simpson diversity in TCR- $\beta$  repertoire samples from CeD patients and non-CeD individuals. No significant difference in mean between the two groups was found (adjusted p = 0.272, unadjusted p = 0.0908).

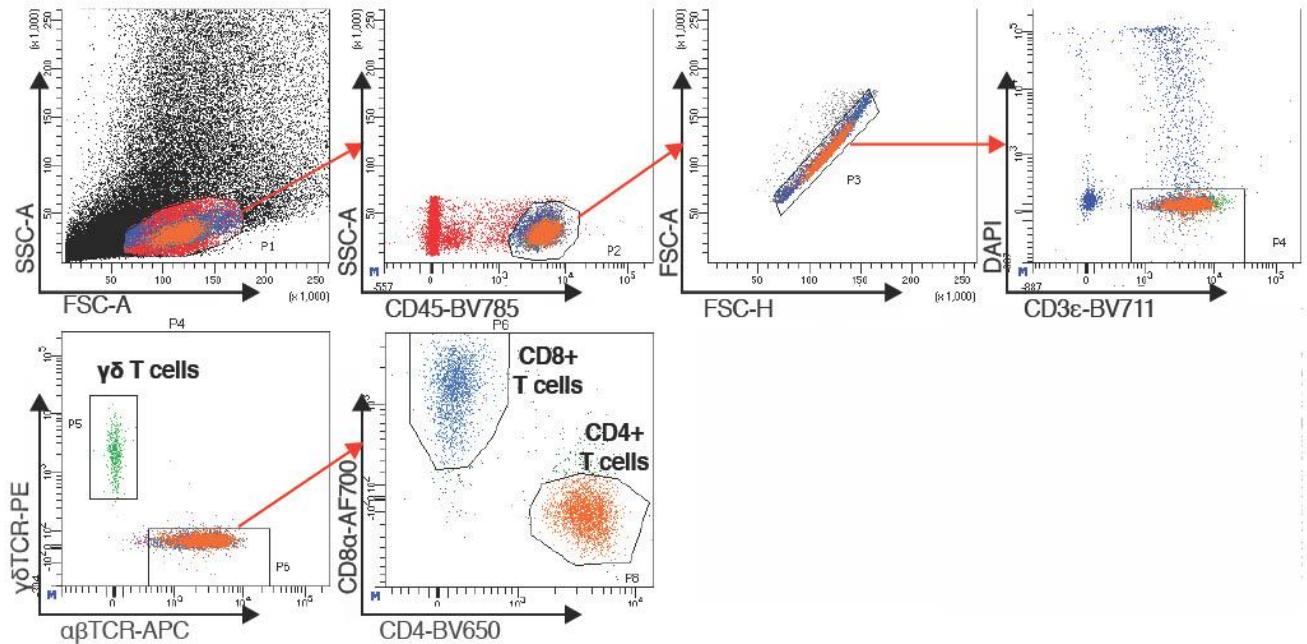

- d. Heatmap showing proportions of TCR- $\beta$  repertoire samples that use each V segment. No V segment shows significantly different mean usage between repertoire samples from CeD patients and non-CeD individuals.

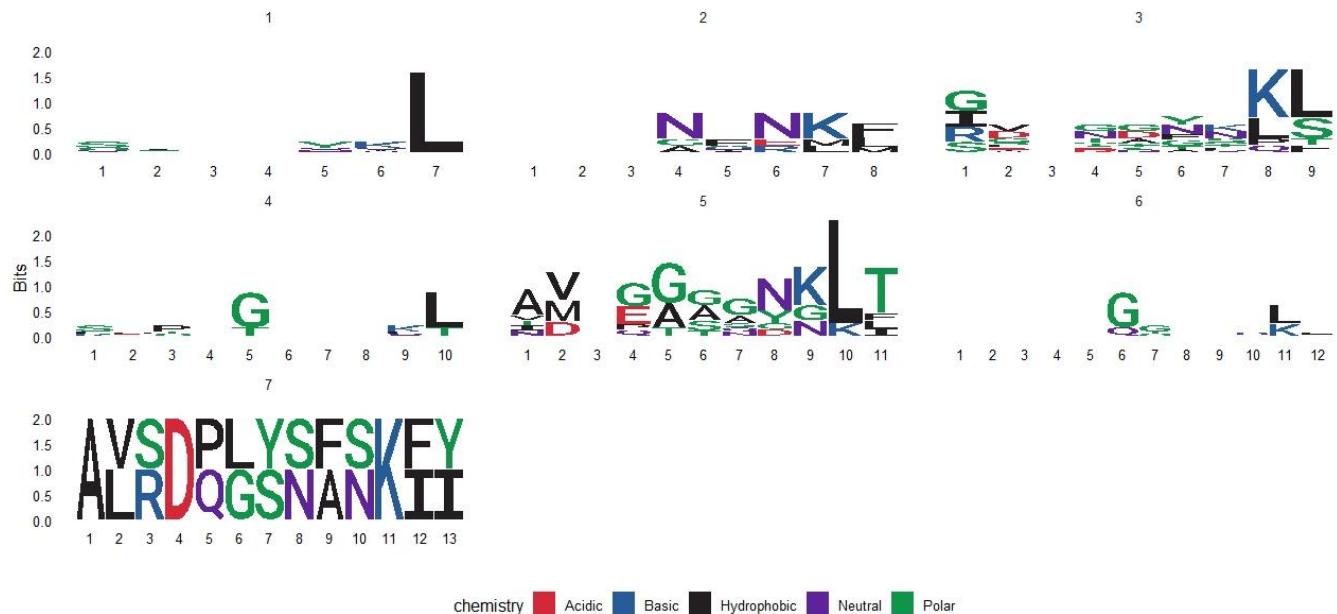

- e. Heatmap showing proportions of TCR- $\beta$  repertoire samples that use each J segment. No V segment shows significantly different mean usage between repertoire samples from CeD patients and non-CeD individuals.

## 1.6 Supplementary Figure S6: CD4+ T cell sorting gate

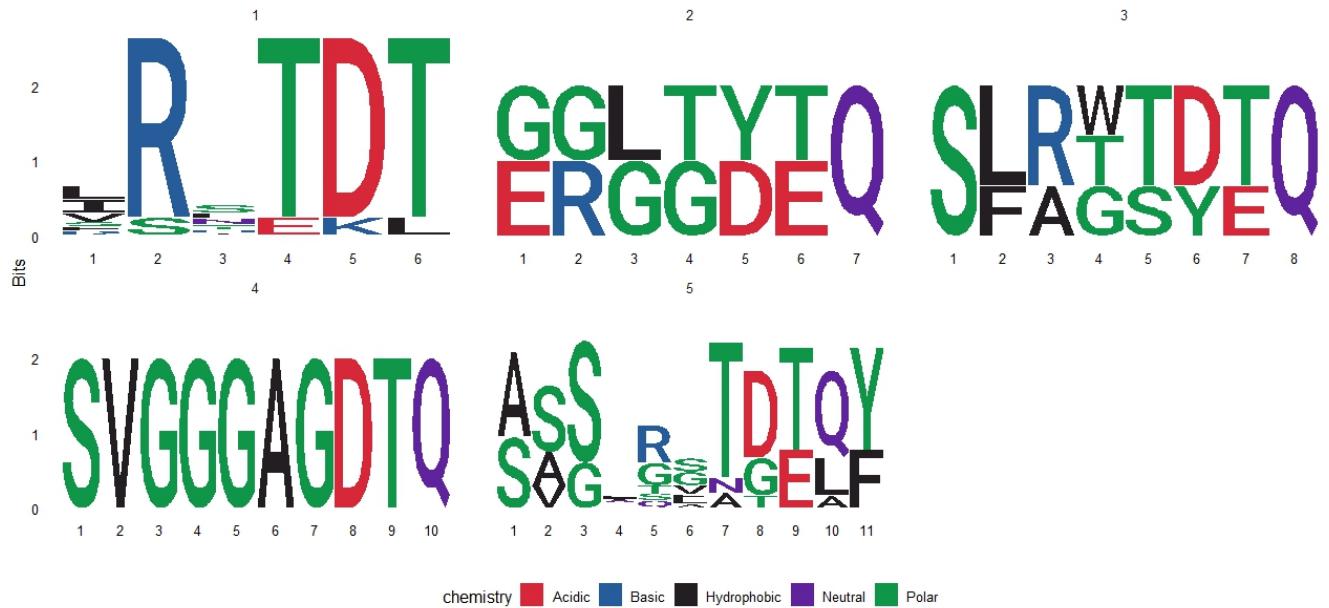

Representative gating strategy for FACS-sorting of intestinal T cell subsets (CD4+, CD8+ and  $\gamma\delta+$ ).

## 1.7 Supplementary Figure S7: Logo plots of TCR-alpha sequences included in the model

### 1.8 Supplementary Figure S8: Logo plots of TCR-beta sequences included in the model
