

Supplementary Materials

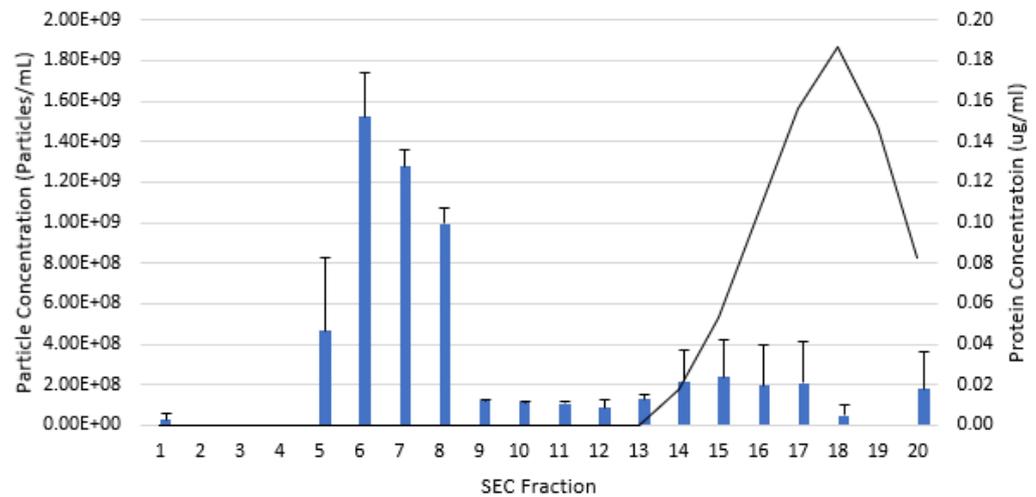

Figure S1. Isolation of extracellular vesicles sized particles secreted by the endometrial cell line RL95-2 using differential centrifugation and size exclusion chromatography. The height of the bars represents the mean concentration (particles/mL) of EVs from three biological replicates. The majority of EVs sized particles were eluted in fractions 5–8. The line graph represents the mean concentration of protein (mg/mL) in each SEC fraction from three biological replicates. Error bars represent the standard error from the mean.

Table S1. Differential enrichment of EV proteins of E2P4 Group compared to E2. Protein identified in EVs released from estrogen- plus progesterone-treated RL95-2 cells to estrogen-treated RL95-2 cells.
