

Supplementary Figure S1: Principal Component Analysis (PCA) for uveal melanoma patients grouped as for the high or the low risk group

3D PCA plot for samples

Supplementary Figure S1: We conducted a principal component analysis (PCA) to assess the variance explained by different components. The PCA figure revealed that PC1 accounted for 7.6% of the variance, PC2 accounted for 5.9% of the variance, and PC3 accounted for 3.3% of the variance. This indicates that these principal components capture a portion of the variability present in the dataset.
