

## SUPPLEMENTARY MATERIAL

**Figure S1. Epidermal and dermal phospholipid quantification of the skin substitutes.** **(A)** Characterization of epidermal total fatty acids using gas chromatography. Impact of EPA supplementation on total n-3 and n-6 PUFA quantities; **(B)** Characterization of dermal total fatty acids using gas chromatography. Impact of EPA supplementation on total n-3 and n-6 PUFA quantities. The values are presented as  $\mu\text{g/g}$  of tissue; ( $N=3$  donors,  $n=2$  skin substitutes per donor). Statistical significance was determined using two-way ANOVA followed by Tukey's post-hoc test. Significant differences are indicated by asterisks (\* $p<0.05$ ; \*\* $p<0.01$ ; \*\*\* $p<0.001$ ). Abbreviations: HS: healthy substitutes; EPA: eicosapentaenoic acid; PS: psoriatic substitutes; PS<sup>EPA</sup>: psoriatic substitutes supplemented with EPA; PS<sup>T</sup>: psoriatic substitutes produced with T cells; PS<sup>T+EPA</sup>: psoriatic substitutes produced with T cells and supplemented with EPA; T: T cells.

The comparison of the levels of lipid mediators derived from n-3 and n-6 PUFA between the PS and PS<sup>T</sup> conditions was carried out. As for the n-3 PUFA lipid mediators, no difference between n-3 prostaglandins levels was noted between PS and PS<sup>T</sup>. As for n-3 HFAs, the amounts of 12-HEPE were decreased in PS<sup>T</sup> as compared with PS, suggesting that T cells might affect the efficiency of the 12-LOX enzyme (Figure S2.A). As for the n-6 PUFA lipid mediators, prostaglandin levels were relatively similar between PS and PS<sup>T</sup>, except for PGE<sub>2</sub> where a significant increase was quantified in PS<sup>T</sup>. Moreover, 12-HETE was diminished in PS<sup>T</sup> compared with PS, reinforcing the hypothesis that the addition of T cells affects the function of 12-LOX preventing it from producing both 12-HEPE and 12-HETE (Figure S2.A and S2.B).

**Figure S2. n-3 and n-6-PUFA lipid mediator profile of the psoriatic skin conditions.** Influence of the addition of T cells to psoriatic substitutes the levels of n-3 and n-6-PUFA lipid derivatives in the epidermis of PS and PS<sup>T</sup>; **(A)** Characterization of epidermal n-3 lipid mediators derived from EPA; **(B)** Characterization of epidermal n-6 lipid mediators derived from AA. ( $N=3$  donors;  $n=2$  skin substitutes per donor). Statistical significance was determined using two-way

ANOVA followed by Bonferroni's *post-hoc* test. Significant differences are indicated by asterisks (\* $p < 0.05$ ). Abbreviations: AA: arachidonic acid; EPA: eicosapentaenoic acid; HEPE: hydroxyeicosapentaenoic acid; HETE: hydroxyeicosatetraenoic acid; T: T cells; n-3: omega-3; n-6: omega-6; PG: prostaglandin; PUFAs: polyunsaturated fatty acids; PS: psoriatic substitutes; PS<sup>+T</sup>: psoriatic substitutes produced with T cells.

### **Supplementary tables**

**Table S1. Levels of fatty acids in phospholipids of the epidermis of the skin substitutes after EPA supplementation.**

| Fatty acids                                | Epidermal phospholipids |                |                |                  |                      |         |
