	1000	2.8	0.68 ± 0.02	1.00 ± 0.03	0.21 ± 0.01	2.6 ± 0.5

HA – hennoside A; HB – hennoside B; HC – hennoside C;

NaCl – 0.9% NaCl; D'MEM-FCS D'MEM cell culture media supplemented with 10%FCS

([#]) Concentration of antioxidants in 10 times diluted D'MEM-FCS.

Table S2. Effect of hennosides on the erythrocyte lysis.

	Hennoside ($\mu\text{g/mL}$)	NaCl OD_{540}	NaCl/10%FCS OD_{540}	DMSO in NaCl	
				dil. (x)	OD_{540}
HA	0	0.049 ± 0.005	0.058 ± 0.004

	200	0.058 ± 0.003	0.063 ± 0.001	2500	0.048 ± 0.004
	500	0.059 ± 0.008	0.078 ± 0.001	1000	0.049 ± 0.005
	1000	0.070 ± 0.002	0.092 ± 0.003	500	0.056 ± 0.007

HA – hennoside A; HB – hennoside B; HC – hennoside C;

NaCl – hennosides diluted in 0.9% NaCl

NaCl-10%FCS – hennosides diluted in 0.9% NaCl supplemented with 10% FCS

DMSO in NaCl: Diluted DMSO used as a control; The results show no effect or only minor effect (500 x diluted) of DMSO on erythrocyte hemolysis.

Table S3. Effect of hennoside on methemoglobin formation

	Hennoside ($\mu\text{g/mL}$)	NaCl OD_{630}	NaCl/10%FCS OD_{630}
HA	0	0.096 ± 0.004	0.111 ± 0.004

	500	0.114 ± 0.002	0.116 ± 0.006
	1000	0.126 ± 0.001	0.122 ± 0.003

Methemoglobin formation studied based on the change in outdated hemoglobin OD_{630} values.

HA – hennoside A; HB – hennoside B; HC – hennoside C;

NaCl – hennosides diluted in 0.9% NaCl;

NaCl/10%FCS – hennosides diluted in 0.9% NaCl supplemented with 10% FCS.

Table S4. Effect of hennosides on concentration of antioxidants in cell-culture supernatants of human breast cancer cell lines and primary mesenchymal stem cells.

		Antioxidants concentration					
		24h		48h		72h	
	($\mu\text{g/ml}$)	(mM)	(%)	(mM)	(%)	(mM)	(%)

	100	0.503	117	0.541	117	0.590	100

HA – hennoside A; HB – hennoside B; HC – hennoside C.

MDA 231 and MCF-7 – human breast cancer cell lines; PDL-MSC - primary human periodontal ligament; PB-MSCs - primary human peripheral blood mesenchymal stem cells.

The concentration of antioxidants in the cell culture supernatant was determined by FRAP assay.

The concentration of antioxidants without hennosides is mean $\pm$ SD of three independent measurements; The concentration of antioxidants with hennosides are mean values of one measurement performed in triplicates.
