Table S1. Two-way analysis of variance (ANOVA) showing internode length, internode diameter, yield per vine, cluster number per vine, and Ravaz index from the 2019 and 2020 growing season ($n = 12$ for internode length and diameter; $n = 7$ and $n = 15$ for harvest parameters (yield per vine, cluster number per vine, and Ravaz index) in 2019 and 2020, respectively). Treatment means followed by standard error of the mean. Different letters indicate significant differences between treatment groups based on Tukey HSD. Significant p -values (<0.05) are shown in bold fonts.

Table S2. Two-way analysis of variance (ANOVA) showing sugar content (brix), pH, and titratable acidity (TA) at harvest from the 2019 and 2020 growing season. Treatment means followed by standard error of the mean. Different letters indicate significant differences between treatment groups based on Tukey HSD. Significant p -values (<0.05) are shown in bold fonts.
