

Table S1. *De novo* assembly statistics of *Castanea sativa* transcriptome before (Contigs) and after redundancy removal (Transcripts).

Transcriptome assembly metrics	
Total number of raw reads	193 896 450
Total number of reads after trimming	134 286 842
Number of contigs in <i>de novo</i> transcriptome assembly	164 926
Number of transcripts in <i>de novo</i> transcriptome assembly	32 871
Average length of the transcripts	906.25
N50	1 230
GC %	44

Table S2 – *Castanea sativa* transcriptome completeness as determined by Benchmarking Universal Single-Copy Orthologous (BUSCO)

BUSCO notation	BUSCOs
Complete Single-Copy	86.67%
Complete Duplicated	7.45%
Fragmented	3.53%
Missing	2.35%

Figure S1 – GO functional annotation of the *Castanea sativa* de novo transcriptome. The transcripts were uploaded to Blast2GO and a blastx was performed, as well as an InterPro scan. The GO annotated transcripts were categorized according to cellular component (**A**), biological process (**B**) and molecular function (**C**).

[illegible]
