

Figure S1. Frequency distribution of various morphological and physiological traits of Cocodrie x Dular RILs under a control condition at the seedling stage with arrowheads indicating the trait means of Cocodrie (C), Dular (D), and RIL population (R). CHL – chlorophyll content; SHL – shoot length; RTL – root length; RSR – root to shoot ratio; DW – shoot dry weight; SKC – shoot K^+ concentration; SNC – shoot Na^+ concentration; SNK – shoot $Na^+:K^+$ ratio.
