

Figure S1. Diagram of the *psbK*–*rps16* region of the plastid genome in *Lobelia siphilitica*, highlighting the relative positions and orientations of all genes (*psbK*, *rps16*, and two distinct copies of *trnQ*), a 94-bp repeat, an imperfect minisatellite, and unknown open reading frame (*orf262*). Primer sequences are listed in Table S4. Drawing is to scale.
