

Supplementary Material Table S1

Survey of seed types recorded in the present study. Ploidy level of mother trees (*Mother*), number of seeds (*Seeds*), inferred ploidy level of embryo (*Embryo*), endosperm (*Endosperm*), egg (*Egg Cell*), and central (*Central Cell*) cells are reported. Embryo (*Embryo Origin*) and endosperm (*Endosperm Origin*) origins are interpreted based on inferred ploidy level of embryo and endosperm. Alternative interpretations are separated with slash mark „/“. Sexual or apomictic seed origin (*Seed Origin*) is indicated. If necessary, explanations are given in a note (*Note*). Unbalanced ploidy level of sperm cells, embryos, and endosperms are marked with „~“. Note that estimation of ploidy level is not precise in the cases of >12x endosperms, because measurement error is higher with increasing ploidy level.
