Figure S1. Heatmap of Top50 differentiated gene expression (DEG) based on the comparison of 15min vs. control samples. The heatmap colour range is from red for positive Z-scores values to green for Z-score negative values. Number of differentially expressed (DE) features (Probability > 0.9): 1,712. Up-regulated (M > 0): 919. Down-regulated (M < 0): 793. Annotation of transcript IDs see in AnnotationTable (DOI: 10.17632/p66v4yxbtp.1).

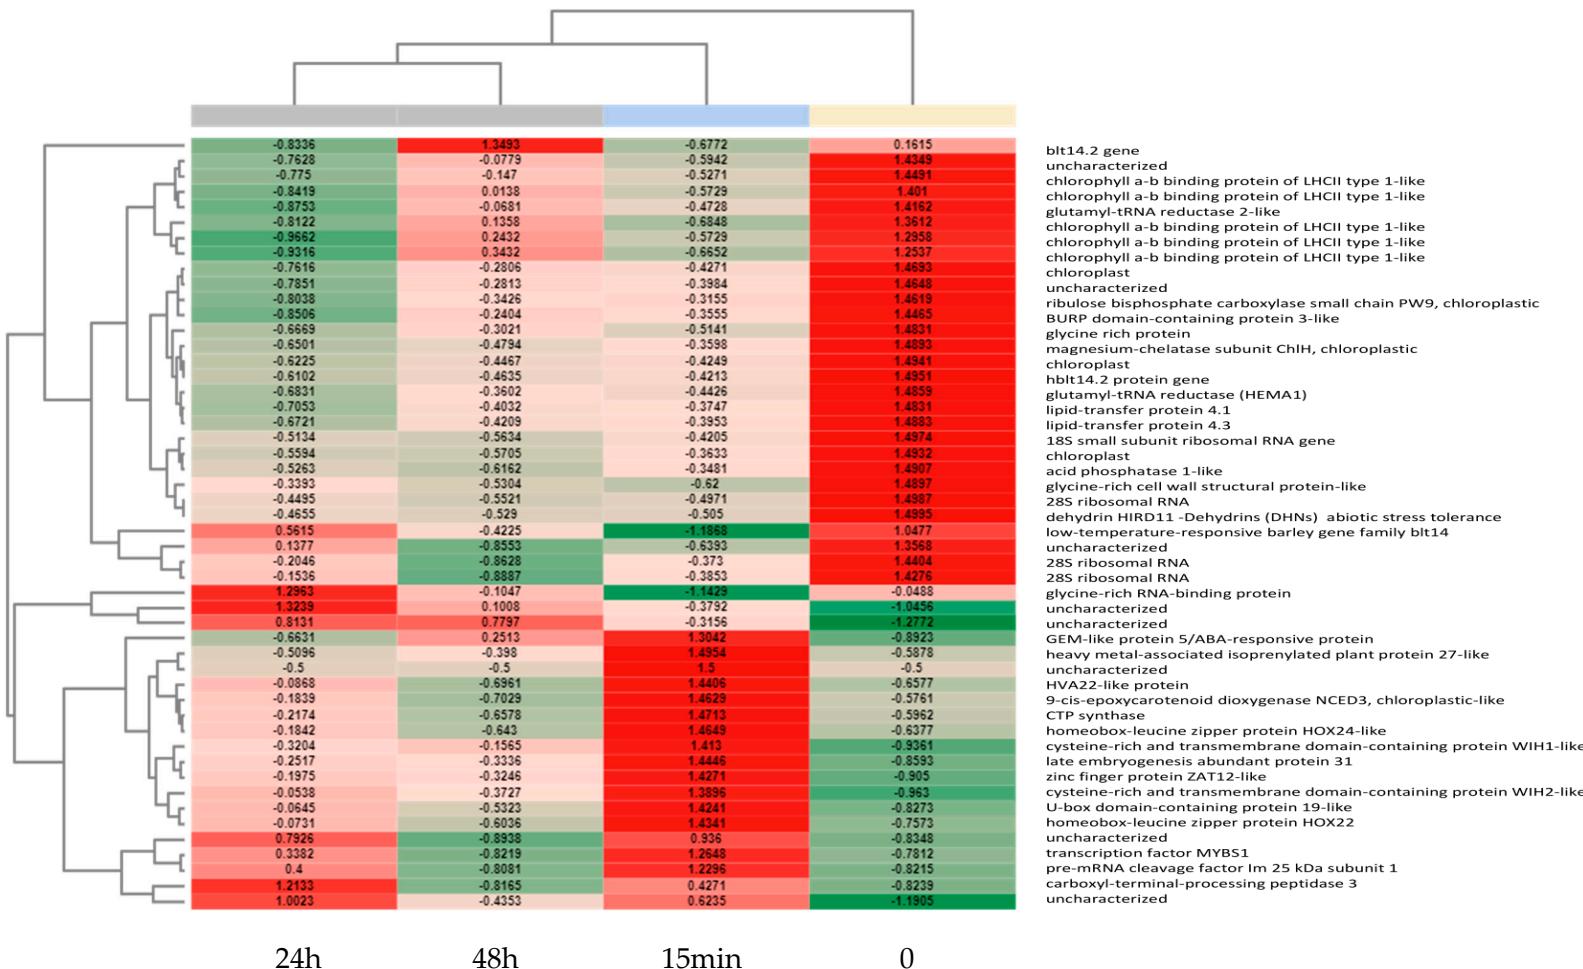

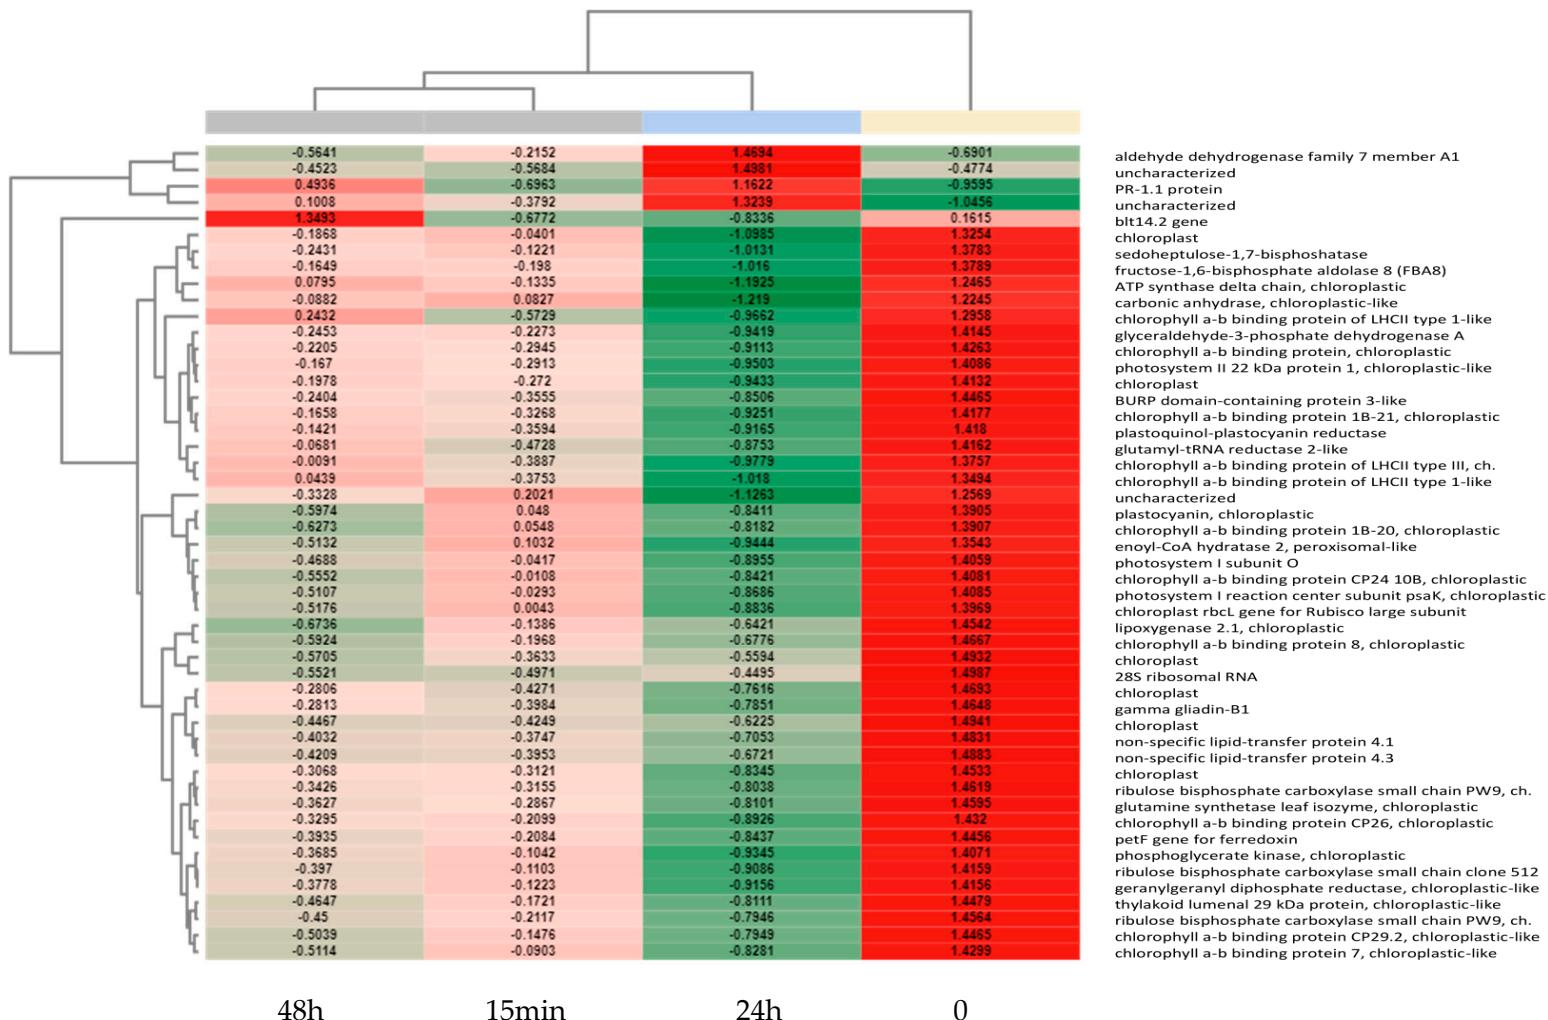

Figure S2. Heatmap of Top50 differentiated gene expression (DEG) based on the comparison of 24h vs. control samples. The heatmap colour range is from red for positive Z-scores values to green for Z-score negative values. Number of differentially expressed (DE) features (Probability > 0.9): 2,485. Up-regulated (M > 0): 1,279. Down-regulated (M < 0): 1,206. Annotation of transcript IDs see in AnnotationTable (DOI: 10.17632/p66v4yxbtp.1).

Table S1. Time-course expression analysis (DOI: 10.17632/xvvscxpz6w.1) of count data (using CoutTable DOI: 10.17632/xvvscxpz6w.1) was performed to detect genomic features with significant temporal expression changes and were divided into nine clusters. Differentially expressed features identified (False Discovery Rate < 0.05): 2,856. Significant features (R-squared > 0.7) according to the selection procedure: All significant features: 1,046. Significant features for each regression variable: START: 1,042; LINEAR: 689 and CURVED: 663. The genes of the nine clusters were classified also by Kyoto Encyclopedia for Genes and Genomes (KEGG) analysis and were supported by literature publications (DOI marked per genes).

Table S3. Primers of real-time PCR for the investigated gene expression were designed based on contigs of transcript dataset (TSA: GJUY00000000.1) using Primer3Plus software. Housekeeper genes were designed based on sequences of *T. aestivum* in NCBI dataset. Investigated contigs were blasted to NCBI database to control identification of sequences.
