

### Supplemental Figures

**Figure S1.** Effect of the basal medium and concentration of BA and NAA on callus induction from the zygotic embryo explant. Scale bar, 1.0 mm. Unit of PGR concentration is in  $\text{mg}\cdot\text{L}^{-1}$ . The data was recorded 1 month later.

**Figure S2.** Effect of the basal medium and explant type on callus induction. The PGR combination used in this experiment is  $3.0 \text{ mg}\cdot\text{L}^{-1}$  BA and  $1.0 \text{ mg}\cdot\text{L}^{-1}$  NAA. Scale bar, 1.0 mm.
