

Figure 1. Applied relative humidity (%) and PPFD ($\mu\text{mol m}^{-2} \text{s}^{-1}$) for each treatment in summer or spring conditions

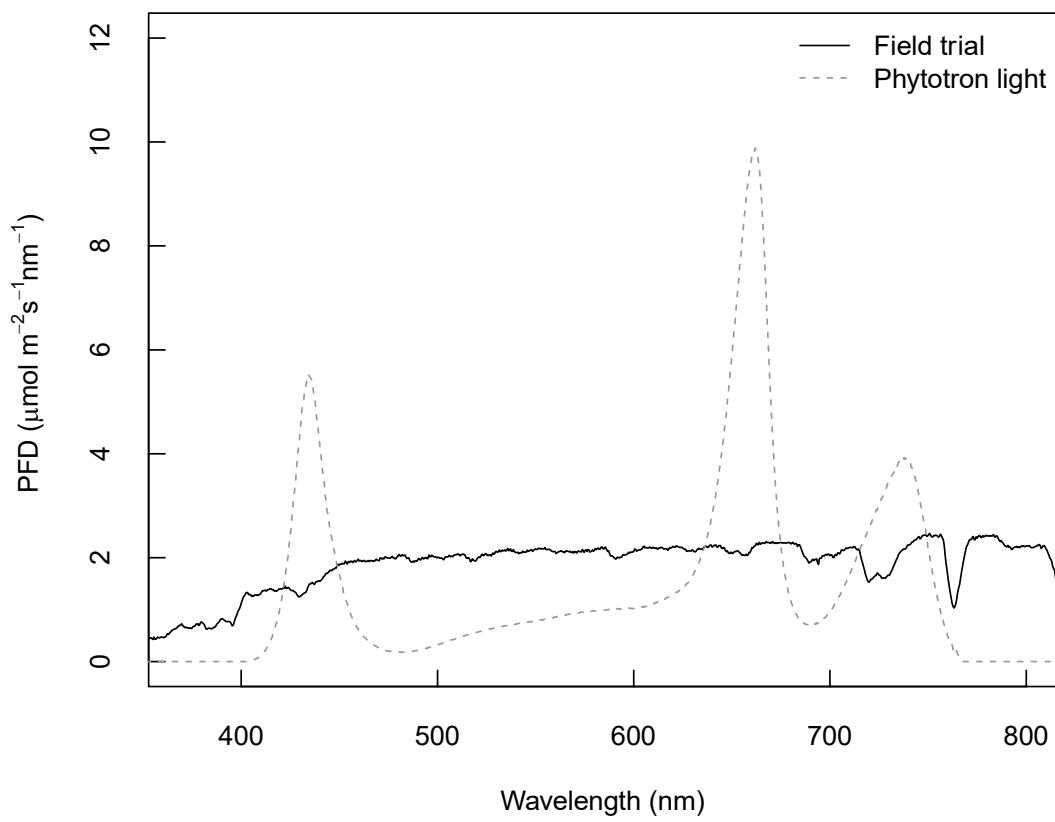

Figure 2. Spectrum examples of the applied light. The field trial example corresponds to a sample of the sun spectra (28% Blue light, 36% Green, 36% Red and R:FR 1.1 in average), meanwhile the phytotron light quality corresponds to the used spectra in the phytotrons (25%B, 16%G, 59%R and R:FR 1.8). The integrated area between 400 and 700 nm corresponds to an approximately $575 \mu\text{mol m}^{-2}\text{s}^{-1}$ of photosynthetic photon flux density in each case

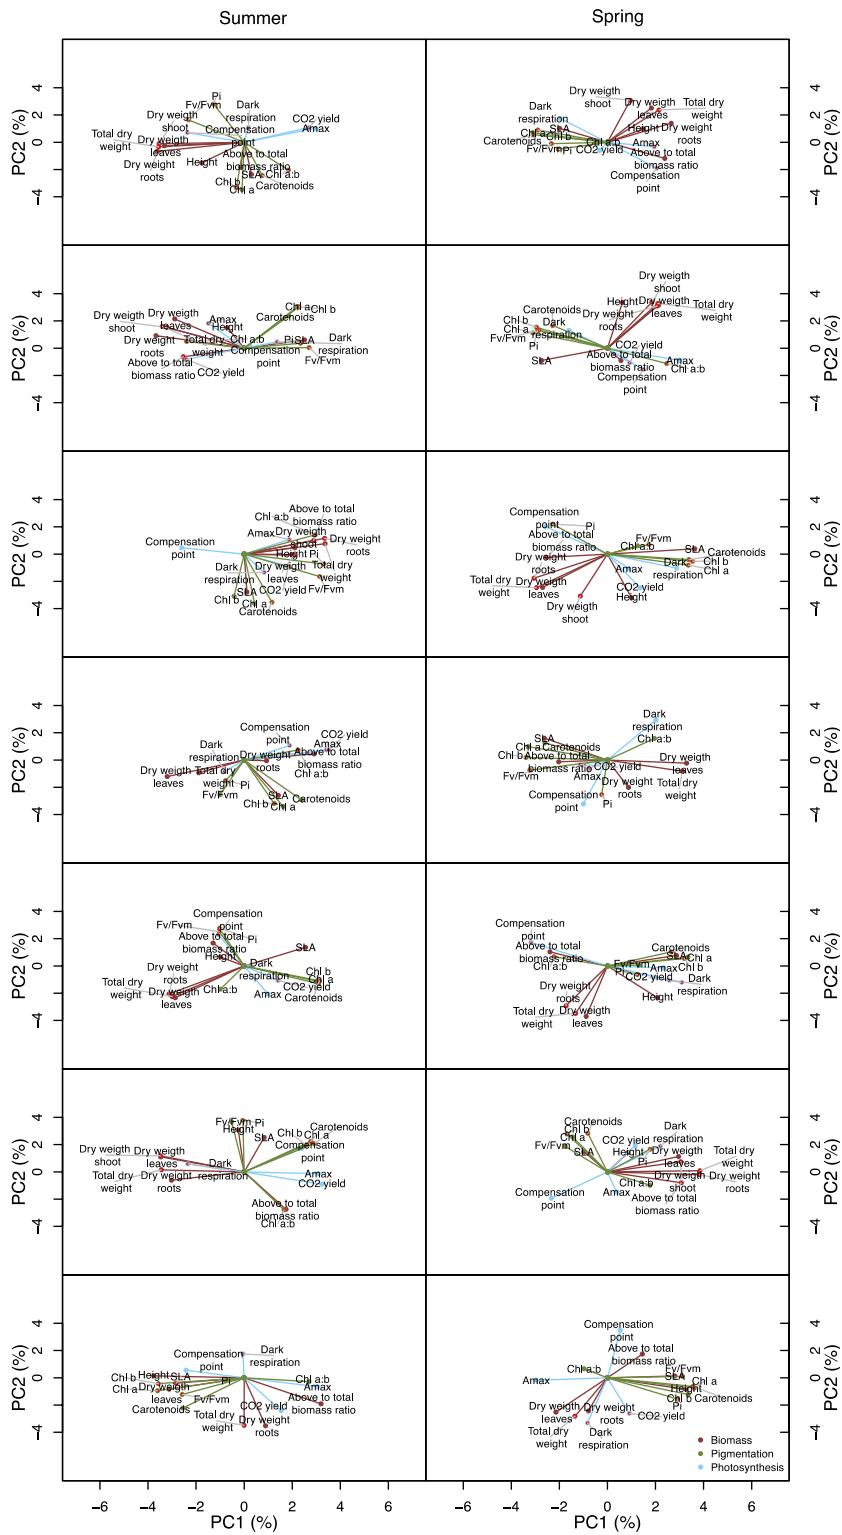

Figure 3. Principal component analysis loadings of each species in two different conditions: Summer and Spring. *Alnus* was not included in the spring trial under the sinusoidal treatment
