

Supplementary Figure 1. Relative expression analysis of RD22 (normalized with ACT7) of six *V. corymbosum* cultivars at six weeks after drought stress. White bars: control condition. Grey bars: drought stress condition. Standard error bars are shown. * indicate significant statistical differences between treatments.

Supplementary Table 1. Blueberry cultivars used in this study. The pedigree of each cultivar is listed from <https://www.ars-grin.gov/cor/catalogs/vacblue.html>, and genetic composition is also indicated (Lobos et al., 2015; Rowland et al., 2003). VC: *Vaccinium corymbosum*; VA: *V. angustifolium*; VD: *V. darrowii*; Vas: *V. ashei*.

Blueberry Cultivar	Pedigree	Genetic species composition (%)
Elliott	Burlington x US 1 [Dixi x (Jersey x Pioneer)]	100 VC
Bluegold	Bluehaven x Me-US 5 (Ashworth x Bluecrop)	89,5 VC 14,1 VA
Brigitta	open pollinated Lateblue (at Michigan State University) selected in Australia	100 VC
Biloxi	Sharpblue x [US210(US67 x US132) x Florida 4-76(Bluecrop x13-236)]	41,8 VC 1,8 VA 32,5 VD 11,3 Vas
Sharpblue	<i>V. corymbosum</i> x <i>V. ashei</i> & <i>V. darrowi</i> (Fla 61-5 x Fla 62-4) tetraploid	43,7 VC 28,8 VA 15 VD 12,5 others
O'Neal	Wolcott x Fla. 4-15 mainly <i>corymbosum</i> , some <i>angustifolium</i> , <i>ashei</i> , <i>darrowi</i>	84 VC 10 VA 3 VD 3 Vas

Supplementary Table 2. Annotation and conserved domain classification of candidate genes from LEA superfamily used in this study for qPCR expression analysis. §: sequences available in GenBank. †: sequences derived from Darwish et al. (2013) (<http://bioinformatics.towson.edu/BBDG454/Default.aspx>). δ: sequences derived from Gupta et al. (2015) (<https://bitbucket.org/lorainelab/blueberrrygenome>).

Candidate gene	Annotation	Conserved domain classification	E-value	Reference ID
Dehydrin 1	Dehydrin 1 (bbdhn1)	Dehydrin superfamily	7.5e-19	AF030180.1§
Dehydrin 2	COR11 (bbdhn7)	Dehydrin superfamily	2.3e-17	AY660960.1§
Dehydrin 3	14-kDa dehydrin (bbdhn6)	Dehydrin superfamily	2.3e-03	AY660959.1§
LEA1	Late embryogenesis abundant protein Dc3	Late embryogenesis abundant protein LEA4	1.0e-019	CUFF.38534.1δ
LEA2	Late embryogenesis abundant protein Lea5	Late embryogenesis abundant protein LEA3	8.3e-20	contig07652†
LEA3	Late embryogenesis abundant protein	Laminin Domain II	3.4e-03	contig13365†
RD22	Dehydration-responsive protein RD22	BURP (RD22) containing domain protein	9.72e-93	gene.g32217.t1.1δ

Supplementary Table 3. Nucleotide sequences of primers employed for qPCR in this study (LEA and normalizer genes). §: sequences available in GenBank. †: sequences derived from Darwish et al. (2013) (<http://bioinformatics.towson.edu/BBGD454/Default.aspx>). δ: sequences derived from Gupta et al. (2015) (<https://bitbucket.org/lorainelab/blueberrygenome>). * indicates primer sequences reported in Walworth et al., 2012 (*), Zifkin et al., 2012 (**) and Vashisth et al., 2011 (***) All primer pairs amplify the 3'- UTR region of each selected gene, have a melting temperature of 59°C±1, and a predicted amplicon length of 60-200 bp.

Gene	Reference ID	Primer sequence
<i>Dehydrin 1</i>	AF030180.1§	FW-5'-GGTGGTGGTGCTGATAAG-3' RV-5'-GACGTGATGATGAATCAATCTAAT-3'
