¹The analyzed ornamental flower traits were: NF- number of flowers/plant, NP-number of peduncles/plant, NFP- number of flowers/peduncle, LP- length of peduncle (cm), LCT- length of corolla tube (cm) and WF- width of flower (cm). Values shown are means ±SD ($p \leq 0.05$). Lowercase letters in common indicate no significant differences between the means within the same character according to Tukey's post-hoc test ($P \leq 0.05$).
